Apart from the make, there is one simple yet important factor which mainly determines the benefit of maximum air displacement by a ceiling fan and that is the height at which it is placed.

Tests have proved that a ceiling fan placed at a height of 9½' from floor level gives you the fullest benefit of air displacement.

IEW FANS HAVE A HIGHER CAPACITY FOR AIR DISPLACEMENT AND THAT TOO AT THE LOWEST CURRENT COST.

STILL GROWING AT SIXTY

The Dunlop factory at Ambattur was declared open on February 12, 1959.

Sixty years ago, when Dunlop brought the first pneumatic tyres to India, only the venturesome rode on bicycles and the automobile was an object of wonder and awe. Some years later, it could still be said that "it needed as much courage to travel in a bus as to run it!"

Courage and enterprise have worked many wonders in these sixty years, not least being the progress of road transport. The new factory at Ambattur, Dunlop's second in India, is a tribute to those who have raised the bicycle and motor vehicle to their present stature.

The Dunlop Rubber Co. (India) Ltd.
