INDEX OF SUBJECTS.

The letter "n" added to the number of the page indicates that the reference is to a footnote.

Abstraction, nature of, 165.
Acquired tendencies and heredity, 168n.
Action memory, described, 206.
Activity, meaning of, 365; deliberate activity, 421; afferent activity, 425-8; efferent activity, 425-9; central activity, 429-30; arbitrary activity, 141-2, 282-6, 308.
Admiration, mentioned, 270; admiration and effort, 317.
Advanced systems, meaning of, 41, 59.
Art, its existence due to the nature of the attention-mechanism, 427, 469; explanation of aesthetic activity, 468, 505; aesthetic activities as rudiments of useful functions, 468n, 497-8; effort as a factor in appreciation, 469; variety and unity in aesthetics, 472; the factors in aesthetics, 473; things which are aesthetically indifferent, 477; on the place of associations in aesthetics, 485; the aesthetic standard, 485-6; the wise material in aesthetics, 492; the interrelation of morality and aesthetics, 501. (See also Beauty.)
Afferent activity, nature and place of, 425-8; in dream-life, 436-8, 456; thought as dependent on afferent activity, 448; afferent activity and morality, 452.
After-images, mentioned, 192; their nature, 210-1.
After-sensations, as essential to sensations, 56; mentioned, 210.
Aim, as traceable in action, 283, 285, 305; clearness of aim, 292.
Anger, as a mood, 178-9; mentioned, 270.
Animals, psychology of, mentioned, 3, 159, 162, 261; animals have no general memory, 226; deliberation in animals, 300; genius and the congenital equipment of animals, 394; animal psychology, 407, 462-6; the fundamental difference between man and animal, 466.
Appearance and reality, problem of, 324, 327-8, 356n, 369.
Apperception, as defined by Wundt, 152; process of apperception referred to, 369.
Aptitudes, as factors in likes and dislikes, 251.
Arbitrary activity, 141-2, 282-6, 308.
Assertion, will as self, 311-3.
Association, history of the doctrine of, 4-8; association as determined by relevancy to a topic, 4; value of the principle of contiguity, 41; laws of association as stated by Bain, 7; Associationists and Herbertians, 87n; nature and criticism of the theory of association, 141-52; the process of association, 141-3; association and contiguity, similarity and recency, 141-3; association by contrast, 143-4; association as development, 144-6; law of association as revised, 149; quasi associations, 150; associations and moods, 278; associations as need-determined, 284; theory of association, 329; bodily aspect of association, 334; a stable order as implied in association, 355; an experimental study in association, 424; associations in dreams, 438; association with and without the presence of a primary or perceptual factor, 463; the effect of experience on associations in animals, 466; growth of associations, 466; associations in aesthetics, 484, 485; mentioned, 504.
Attention, nature of, 9, 504; attention need not be directed to one object alone, 19, 77-9; attention and inattention, 45; sensations; images and feelings do not exist apart from attention, 45-7; attention is dependent on stimuli, 47; attention, as keeping normal and lax, 59-60; attention as distribution of details, 60n; attention as a stable quantity in all men, 60, 468; the desire to attend, 61; effort of attention, 61-2; opinions on the nature of attention, 63-3; criticism of these opinions, 63; attention physiologically defined, 64; definition of attention, 64,
INDEX OF SUBJECTS

89; attention as deliberate, 65-6; opinions on voluntary and involuntary attention, 66; the measure of attention, 66-7; the focus of attention, 67; attention as compulsory and equitable, 67n; attention as abnormal, 67-8; the subjects of attention tend to change, 69; the details in a subject tend to change, 69-70; narrowing the normal field of attention, 70-1; expanding the normal field of attention, 71; physiology of attention, 71; the field of attention, 72; attention energy and motion energy tie one, 72-4; attention and heredity, 74; attention and observation, 75-77; attention in habits, 79-80, 95n; attending to habits, 80; attention in the routine of life, 81; memory as dependent on attention, 81-2; conditions which favour attention, 84-6; attention as teleologically determined, 86, 505; the education of the attention, 87; factors producing changes in the field of attention, 87-8; general conclusions concerning attention, 88; description of the process of attention, 88-9; the liberation of attention in habit, 98-9; attention determines the process of combination or thought, 165-6; re-development is attention to surviving traces, 191-2; attention and re-collection, 217, 226-7; attention in interest and effort, 250; attention and moods, 279; awareness and attention, 317; its place in psychology, 320; partial withdrawal of the attention, 420; attention in average thought, 422; attention to what we attend is easy, 424; attention argues bodily adjustment, 428; attentional tone, 428; engrossment of the attention as intensifying vividness, 455; inattention leads to sleep, 457; minimal attention and spiritualism, 461; attention in animals, 462-3; aesthetics as attention-determined, ch. 11; variety, complexity, and unity in the beautiful as requirements of the attention, 470-1; the comic as attention-determined, 492-5; imagination as attention-determined, 496-9.

Attitude, as tending to actualise itself, 258-9.

Audible, meaning of the term, 195-7; the place of auditory systems in the memory, 197-205.

Automatic; does a habit ever become automatic? 99-101; automatic association, 152.

Average thought, its imperfection, 225, 422-5.

Awareness, meaning of the term, 82-3; mentioned, 243, 266, 293, 506; awareness and bodily processes, 249; awareness and needs, 297; awareness and attention, 317.

Awe, mentioned, 270; awe and effort, 317.

Beauty, in visual forms, 468-79; definition of the beautiful, 468; the beautiful as rudimentary curiosity, 468; effort and the beautiful, 469; disinterestedness, usefulness and pleasure and the beautiful, 470; variety, unity, and gentle effort in the beautiful, 470-2; familiarity and the beautiful, 473; size and novelty and the beautiful, 473, 483-4; things which are aesthetically indifferent, 477; the question of taste, 477; children and savages and the beautiful, 478; the borderland of the beautiful, 479; inference and the beautiful, 479-81; impressionist and realistic art, 479; misleading beliefs and the beautiful, 481-2; education and fashion and the beautiful, 482-3; skill, associations, interests and organised reaction and the beautiful, 484-5; the aesthetic standard, 485-6; the beautiful in prose and poetry, 487-91; the beautiful in the orator's art, 491; the beautiful in music, 491-2; the sense material in the beautiful, 492; the beautiful in the widest sense, 492; beauty in thought, 496-9. (See also: Esthetics.)

Belief, meaning of the term, 83n; mentioned, 164, 217, 312, 504; belief and possibility of achievement, 283, 287; its place in psychology, 320; misleading beliefs, 451-2.

Binocular and monocular vision, described, 211-3.

Bodily movements as independent of sensations, 57; bodily movements and ideas, 137; bodily movements and feelings, 233; bodily processes apart from awareness, 249; bodily activity and the nervous system, 309; the relation of mind and body, 323-4, 333-4; the examination of the body can tell us nothing about the outer world, 360; thought is impossible apart from bodily movements, 448.

Brain physiology, some of the more important facts of, 25-8.

Capacity, as distinguished from emotions, inclinations and disturbances, 268-70, 280; capacity and effort, 310; capacity in genius, 417; development in capacity, 42.

Caricature, nature of, 493.

Cause, mentioned, 326, 365; cause and effect, 349-51.

Central activity, nature and place of, 429-300.

Certainty, meaning of the term, 83n, mentioned, 217.

Change, as essential to sensing, 55; motion as change, 326; change as independent of senses, 355.

Character in the individual, 403-7, 417; character as a necessary product, 407; character as perennial, periodic, personal, peculiar, political and passing, 407-9.
INDEX OF SUBJECTS

Chickens do not peck and run on emerging from the shell, 405n.
Child, psychology of the child referred to, 31, 120, 165, 196; sensations in the child, 51, 56, 57; early education and the child, 107-8, 299; the evolution of habits in the child, 109, 110, 117; a child learning arithmetic, 115; childhood's memories, 186; evolution of memory in the child, 205-7; there is in the child a strong tendency to repeat, 206; child and adult as regards the memory, 229-30; callowness in children, 278n; imitation in the child as dependent on development, 293; the child and peri-

* needs, 294; the child and habits, 315; the child and the problem of mind, 332; the notion of space in infants, 338, 347; the station of cause and effect in children, 349; childhood and originality, 397; plasticity of childhood, 404, 408; child, the development of the child's mind, 400-12; a method of studying the child mind, 412; children's attitude towards toys, 427; children and play, 429, 498, 499; hallucinations in children, 435; dreams in children, 444, 452; instinct in child life, 465; reason in children, 466; love of food in infants, 499; children and the beautiful, 478, 480, 482n.
Choice, mentioned, 269, 273, 279, 310, 318; choice, as defined by Wundt, 291; choice from weaker motive, 305-7; de-liberate choice, 308; choice and character, 408.
Cognition, mentioned, 320.
Combination, meaning of the term, 39, 41, 504; combination as modified by the processes of attention, economisation and memory, 165-7.
Combination, feeling, meaning of the terms, 41; mentioned, 38, 197, 207, 233, 311; combination feelings are easy to re-develop, 109-9.
Comfort and localised sensations of pain, 242.
Comic, the, as rudimentary malice, 468n; the nature of the Comic, 402-6; definition of the Comit, 493; the Comic in Shakespeare, 493; the Comic reflects a likely situation, 493-4; malice and humour, 494; humour as explosive and not contemplative, 494; the Comic as attention-determined, 494-5; secondary factors in the Comic, 495.
Comparison, nature of, 161-3; comparison in dreams, 438.
Complementary image, described, 211.
Complication, meaning of the term, 39, 41, 504; complication of ideas, 141-3; primary and secondary complications, 143-4; relative age of complications, 144; complications in thought, 155-9; socially determined complications, 159; complications in the re-development of the unlike, 256.
Compound, meaning of the term, 39, 41, 504; compound and unit, 122n; percepts and ideas are compounds, 122n.
Conation or willing, as defined by Hamilton, 280; mentioned, 320.
Connection, meaning of the term, 39, 41, 207, 504.
Consciousness, meaning of the term, 82-3n; acting with and without consciousness, 100; consciousness and habit, 118; mentioned, 311, 504; consciousness and phenomena, 369.
Contemplation, as rudimentary curiosity, 468n.
Contiguity, association by, 141-52; mentioned, 285, 424.
Contrast, association by, 143-4.
Counter-connection, meaning of the term, 164.
Cross-classification of memories is thought, 167, 420.
DARK field of vision, mentioned, 222n.
(See also Vision.)
Death, as the end of life, 353.
De-development, the nature and process of, 190-1.
Definition, of hypothesis, 11; of experiment, 34-5; of psychology, 38, 296; of Weber's law, 53; of feeling, 59; of attention, 64, 89; of sub-consciousness, 82n; of knowing, 82-3n; of habit, 121; of the process of complication, 144, 146, 149; of thought, 151; of apprehension, by Wundt, 152; of a need, 160, 297; of generalisation, 165; of effort, 166, 315; of need-satisfying reaction, 172; of sensation, perception and image, by Sully, 174-5; of sensation, percept, image and idea, 175; of mood, by Sully, 179-81; of recency, 181-2; of knowing and connecting, 207; of primary and secondary systems, 209; of positive and negative after-images, by Helmholtz, 210n; of memory, by Gratacap, 215n; of the Present, 223; of feeling, by Sully, 243; of a disturbance or pleasure-pain, 251, 256; of the object of pleasure and pain, 275; of willing or volition, 288, 312; of choice, by Wundt, 291; of deliberation, 300; of desire, 302; of intellect or interconnection, 321; of systems or developments, 321; of force, 326; of motion, 326; of space, 337; of time, 348; of object, 367; of genius, 401; of a definition, 416; of hallucination, by Baldwin, 436; of dreams, 438; of dreams, by Sully, 456n; of aesthetic gratification in general, 468; of the beautiful, 468; of the Comic, 493; of imagination, 497, 498; of play, 503.
Deliberation, mentioned, 266, 295, 312; nature of deliberation, 299-301; definition of deliberation, 300; deliberate
INDEX OF SUBJECTS

action, speech and thought, 421-2; the
place of deliberation, 429.

Desire, as idea, 125, 243, 323; its place
in association, 145-6; our desires are
guided and determined by functional
tendencies and capacities, 247; desire
for pleasure and fear of pain are not
universal factors, 278; desiring as desiring
and willing, 287; mentioned, 298, 503;
the nature of desire, 301-2; desires do
not normally precede an act, 302; will-
ing and desiring distinguished, 302; de-
finition of desire, 302; the place of desire
in psychology, 320.

Detail, its relation to general fact, 23-5.

Development of ideas and sensations,
144-6; definition of a system or a de-
velopment, 321.

Discomfort and localised sensations of
pain, 242.

Discovery, the process of, 11-2.

Discrimination and sub-consciousness, 420.

Distribution of systems, meaning of the
word, 454.

Disturbance, meaning of the term, 42,
280; re-development of disturbances,
200; pain and pain are neither sen-
sations nor feelings, 240-6, 276, 303;
pleasure and pain are to be identified
with a central nervous disturbance, 242, 253,
275-6, 506-7; the nervous system and
disturbances, 246-50; the antecedents
in a disturbance, 250-1; disturbances
and aptitudes, 251; definition of a dis-
urbance, 251, 256; process of dealing
with disturbances, 253, 277; points of
view in relation to disturbances, 254;
opinion and pessimism, 254-5; dis-
urbances not connected with normal
needs are ignored, 254; outward ex-
pression in disturbances, 255; the
nature of pleasure, 255; undisturbed
activity, 256; disturbances are not
always present, 256; the suppression
of disturbances is hereditarily deter-
mined, 258; minimal disturbances are
indifferent, 258; methods of allaying
disturbances, 259-62; the suppression
of disturbances through the diversion
of the attention, 261; mistaken inter-
pretations of disturbances, 262; habit
largely decides what shall be regarded
as a disturbance, 263-4; inference as a
factor in disturbances, 264; normal de-
defensive activity is free from disturbances,
265-6; normal thought and action are
neutral as regards disturbances, 266-7;
disturbances and their relations to the
emotions, 267-71; inability and dis-
urbances, 267; disturbances as disingu-
ished from emotions, inclinations and
capacity, 268-70; feeling, pain, and
imaged pain, 271-3; the nature of grief,
272; principles of action are superior to
disturbances, 273-6; the object of plea-
sure and pain defined, 275; conclusions
as regards disturbances, 279-80; dis-
turbances and the process of willing,
283, 302-5; difficulties in tracing the
disturbance factor, 305; choice from
weaker motives, 305-7; action from
special motives, 307-8; the place of
effort in disturbance, 317; the nature of
disturbances, 320; disturbances as
imaged, 323; disturbances in animals,
464.

Division of labour, and monotony, 427.

Doubt, meaning of the term, 83; nature
of doubt, 163-4; mentioned, 217, 301,
312, 504; doubt, as imaged, 323.

Dozing, the state of, 68.

Dreams, nature of, 13, 456, 504, 509;
sense of position whilst dreaming, 56,
447; the state of dreaming, 68; men-
tioned, 74, 156n, 202, 204, 209, 221,
223, 225, 226, 428n, 500, 503; dreams
and disturbances, 254; whether dreaming
or waking we dwell in our own world, 431;
experiments in dreams, 434; 446-7; the
oneness of waking and non-waking
images, 433; the nature of dream-
pictures, 433; dreams as forming the
lowest plane of thought, 436; extra-
organic stimuli in dreams, 436-8; why
we do not dream about important
matters, 437-8; dreams and our waking
life, 438; intra-organic and effluent stimuli
in dreams, 438-41; dreams of
tastes and odours, 440; dreams, by day
and night, 440; the place of reason in
the dream-state, 441-3; influencing the
dream-state, 443-7; the ethics of dream-
life, 445; dreams reflect the waking
condition, 445; on the loss of muscular
power and sensibility in dreams, 447,
466-7; the source of dreams, 448-51;
the place of effort in dreams, 448-9;
do we always dream in sleep?, 450; 451;
the creation of, setting of dreams, 450-1;
the possible tends to become actual in
dreams, 450-1, 456; the history of
dream-life, 452; the rapidity of dreams,
452-3; the inanity of dreams, 453-4;
why most dreams are forgotten, 453;
dreams as prophetic and symbolic, 454;
dream books, 454; a misinterpreted
dream, 454; vividness of dreams, 454-
6; dreams as merely visual, 455; dis-
tinction between images and dream-
pictures, 455; memory, reflection,
reasoning and moralising in dreams,
456; provoked dreams and related
facts, 456-62.

Dualism, the problem of, 367-70; dualism
and duality in unity, 369.

Duration, as implied in sensing and in
memory, 174.

ECONOMISATION, meaning of the term,
48; science as due to the process of
economisation, 121n; some results of
economisation, 152-3; economisation
INDEX OF SUBJECTS

Evolution, the, of the senses, 356-7.
Excitement, persistence of, 74; excitement and the development of ideas, 144-6; neural excitement, 178-9; neural excitement implies neural momentum, 182-3; mentioned, 196, 274, 299; action under excitement, 197; excitement as absent from absorbing pursuits, 275; the place of excitement, 278, 280, 505.
Exercise, with accompanying effort, 97, 248; the place of exercise in the formation of habits, 102-3; special features in exercise, 103; exercise and the growth of the memory, 103; superiority of judgment over exercise, 103-5; exercise memory, 205-6.
Exhausted system, meaning of the terms, 41, 367, 504; mentioned, 176, 322, 324, 330, 331, 332, 351, 360, 366.
Existence, the unity of, 361.
Expectancy, the influence of, 263.
Experience, meaning of the term, 333.
Experiment, definition and description of, 34-5; experiment as essential in psychological inquiries, 35; as applied to pleasure and pain and volition, 35-6; a number of experiments suggested, 37; experiment and general fact, 211; experimental introspection as applied to the problem of free will, 285-6; experimental fallacies, 305; experiments during dreams, 433; experiments as essential in the study of dreams, 438, 443, 440-7; experiments as essential in the study of spiritualism, 462; experiments with animals, by Thorndike, 465.
Explanation, the nature of the process of, 365.
Extension, what has only extension is difficult to re-develop, 230-1.
Extensivity, the nature of, 53.

FACTOR, mentioned, 365.

Fainting, mentioned, 68.
Faith cures, mentioned, 257; the influence of faith cures, 258-9.
Familiarity and novelty, nature of, 217-8.
Farce, the nature of, 493.
Fascination, the nature of, 302.
Feeling, definition of, 59; feeling as a connecting link between ideas, 159; circumstance alone determines the interpretation of a feeling, 163; neural feelings, 175; feelings and images, 177-8; the place of feeling in the memory, 197-205; feelings in the muscles of articulation, 204-5; feelings as compared with bodily processes, 233; pleasure and pain are neither sensations nor feelings, 240-6, 276, 303; feelings as generally understood, 242-3; feeling as indifference, 243-6; feelings and the nervous system, 246-50, 423; feelings do not develop when the attention is diverted, 248; theory of innervation.
INDEX OF SUBJECTS

feelings, 293; feeling and willing, 305; warmth of feeling is no guide to the strength of a motive, 306; 255" sense of effort, 315-8; feeling as a department of psychology, 319-21, 503; the feeling of resistance and the thing which resists, 325; the bodily aspect of feelings, 334; the feeling of resistance as the unit of existence, 354; feeling and thought, 424; a single feeling as representing a thought, 425; feeling as present in sleep, 438; feelings as suggesting rapidity in dreams, 452.

Feeling tone, mentioned, 53; the nature of feeling tone, 242-3.

Felt strain, the nature of, 61-2.

Force, the nature of, 326; force, as defined by Clifford, 323n.

Forgetting, the nature and process of, 190-1.

Four-dimensional space, the problem of, 342-5.

Free-will, the problem of, experimentally investigated, 285-6; the problem of freedom discussed, 351-2.

Functional readjustment, mentioned, 152.

Functional tendencies, the influence of, 249-50, 284; functional tendencies as equivalent to needs, 247, 280, 321; functional tendencies as motives, 307.

Fury, the nature of, 270.

Future, the, as imaged, 356.

GENERAL facts, their relation to details, 23-5; as an aid to memory, 237; general facts and primitive science, 302.

General ideas, the nature of, 128-9, 193.

Generalisations, the nature of, 164-5, 305; their place in observation, memory and thought, 237, 463.

Generic ideas. (See General Ideas.)

Genius, obstacles to, 393-7; inherent limitations of genius, 393-4, 505; genius and process, 394; the genius theory as a useful social convention, 396; organised reaction in genius, 396; needs and genius, 396-7; men of genius, 397-405; genius in painting, architecture, machinery, astronomy, scientific method, religion and morality, 397-400; the ability of the man of genius, 400-1; genius and environment, 400-2; men of genius and imbeciles, 401; definition of genius, 401; insanity and genius, 402-3; the nature of genius, 417; congenital susceptibility in genius, 465.

Grief, the nature of, 256, 272.

HABIT, its nature yet unexamined, 8-9; mentioned, 74; the history of a habit, 91-2; equivalent terms for the word habit, 912; memorising the facts in establishing a habit, 92-3; casual difficulties, 92-3; the memorising of efforts, 93; the process of simplification in the formation of a habit, 93-7; the place of appropriate exercise in habit, 97; the liberation of attention energy in habit, 98-9; does a habit ever become automatic, 99-101; the absence of sensations in habit, 100; habit and memory, 101-2; the place of judgment in habit, 103-5; the slow growth of habit, 105; why it is difficult to influence a habit, 105-7; the prevention of bad habits, 107; early education and habit, 107-8; each habit is based on other habits, 108-10; the growth of ability, 110; each habit forms a basis for other habits, 110-1; the nature of a habit, 111-4, 505; transitory habits, 112n; the place of repetition in a habit, 113; all thought partakes of the nature of habit, 114-20; habits divided into specific and non-specific, 118-9; habits as yielding insight into the nature of thought, 119-20; habit and the method of inquiry in psychology, 120; the scope of habits, 120; the initiation of habits, 120-1; science is due to the process implied in habit, 121n; habits as the basis of thought, 167-9; organisms exemplify bundles of habits, 168; recency as a habit, 181-2; habit controls desires, 247; habit partly determines our lines of activity, 249; a mistaken interpretation of habits, 262; habit largely decides what shall be regarded as a disturbance, 263-4; habit as regarding and assisting activity, 267-8; inhibition as organised, 274; habit, needs, excitement and thought, 278; habit, belief and possibility, 283; the effect of our volitions is determined organically, 287; subtle thought and simple acts are both organised, 293; particular actions are a sign of particular habits, 293; habits and instincts, 306, 307; habits as unreal, 311; habit and effort, 313; habit and responsibility, 314-5; the place of habit in psychology, 320; habit and character, 329, 404, 417; habit and genius, 396; organised reaction and language, 413-7; the place of habit in aesthetics, 484-5.

Hallucinations, experimentally induced, 433-6; the natural history of hallucinations, 435; hallucinations and the state of wakefulness, 435-6; hallucinations in dreams, 449, 456; hallucinations discussed, 456-62.

Hereditary and attention, 74; heredity and evolution, 166; heredity and the processes implied in disturbances, 275; inherited inclinations, 280; hereditary tendencies and needs, 297, 431.

Horror, the nature of, 270.

Humour. (See Comic, etc.)

Hypnagogic hallucinations, mentioned, 433.

Hypnotism, mentioned, 69, 433.

Hypotheses, the uses and the limitations
INDEX OF SUBJECTS

of, 10-4, 370; definition of the term, by Volkman, 11; mentioned, 211.

Idea, its implications, 122-3; the time occupied in the development of an idea, 120; richness and poverty of detail in an idea, 123; the material of ideas, 124-5; desires, volitions, emotions and thoughts as ideas, 125; ideas which are generally overlooked, 125-6, 420, 422; word ideas as such, 126; why ideas tend to have little content, 127; ideas reflect individual situations, 127; the nature of general ideas, 128-9; ideas cannot be stored, 134; ideas are one with sensations, 136-7; ideas are one with bodily processes, 137; trains of ideas, 137-8; the scope of an idea, 139-40; the complication of ideas, 141-4; development and excitement, and ideas, 144-6; the classification of ideas, 145-6; ideas as conceived by associationists, 150, 174-5; we are not restricted to one idea at a time, 154-5; feelings as connecting links between ideas, 159; ideas and moods, 279; ideas are confused in the dream state, 448. (See also Images.)

Identity, its place in association, 145; the law of identity, 350.

Ideo-motor theory, referred to, 259, 305; as expounded by Bain, Féré and James, 289; criticism of the theory, 291.

Illusions and hallucinations, 436; the place of illusions, 504.

Images, their sources in nerve-endings, 49-50; the nature of an image, 174-5, 207-8; images do not resemble photographs, 192; images are «on exhausted», 193-5; simultaneous sensing and imaging, 199-9; motion as imaged, 203-4; third dimensional imaging, 203; well known and recent images, 220-1; vividness in images, 220-2, 455; complementary images, 211; dim and illusory images, 213-5, 305; images generally lack a setting, 221; pain as imaged, 272-3; aims as imaged, 292; minimal images, 316, 461; sight, as objective, reflected and imaged, 322-3; images as threedimensioned, 323; desires, volitions, thoughts, etc., as images, 323; images and nature, 356; the incompleteness of images in average thought, 424; single images as representing thought, 425; the study of dream-images, 433; the oneness of waking and non-waking images, 433; distinction between images and dream-pictures, 455. (See also Idea.)

Imagination, during the state of waking and dreaming, 13-4, 411, 466; its place in the world series, 209, 504; imagination regarded as unreal, 311; mentioned, 355, 503; imagination as transmuting sensations, 450-6; imagination and retinal vision, 446; imagination and dream-imagery, 450; the rapidity of the imagination explained, 452; imagination as rudimentary thought, 458; imagination as attention-determined, 496-9; the business of the practical imagination, 496-7; definition of imagination, 497, 498; imagination as a play of thought, 497-9; novels, biography, history and poetry, 497-8; imagination follows the line of normal activity, 497-8; the value of imagination, 498; the power of imagination, 499.

Immortality, the problem of, discussed, 363-4.

Impulse, meaning of the term, 42.

Inability and disturbances, 251, 267-8, 276; inability and effort, 314.

Inattention and attention, 45; inattention as leading to sleep, 457.

Inclination, meaning of the term, 42; mentioned, 250, 279, 286, 282, 308, 505; inclinations distinguished from emotions, capacities and disturbances, 268-70; inclinations and disturbances, 274; the incline are disturbances, 277; irrational organised inclinations, 298; inclinations and motives, 306; inclinations in animals, 464.

Indifference, feeling as, 243-6; normal activity is free from disturbances, 266-7.

Indifferent, mentioned, 196.

Individual, his relation to his environment, 373, 417; individual character, 403-7; the evolution of the individual, 499-12.

Infan. (See Child.)

Inference, as a factor in disturbances, 264; in aesthetics, 479-81.

Inhibition, the place of, in disturbances, 253-4, 266, 280; the nature of inhibition, 256-7; the influence of inhibition, 258, 263, 265; inhibition as paralysed, 268; inhibition as organised, 274.

Inner and outer, meaning of terms, 333.

Innervation, the theory of, 293.

Insanity and control, 427; insanity and the ego, 328; insanity and genius, 402-3; nature of insanity, 433; dreams and insanity, 437.

Instinct in children and animals, 465.

Integral, meaning of the term, 39, 40, 503.

Intelect, meaning of the term, 319-21.

Intellellection, definition of, 321.

Intensity, the nature of, 51; rejection of the word, and the proposed substitutes, 52; intensity in attention, 60; intensity in feelings and sensations, 264; intensity in disturbances, 273, 303; intensity of effort, 313.

Interconnecting or reasoning, mentioned, 96, 166.

Interest, and attention, 86; interest in habit, 95; the nature of interest, 250; interest and disturbances, 261; mention, 275, 279; the effort factor in interest, 317; interest and memory, 403-4; interest and the environment, 405.
INDEX OF SUBJECTS

Introspection, the problem of, 15-20; introspection is practicable, and essential to a science of mind, 15; introspection and retrospection are one, 19; conditions of easy introspection, 19, 23; passions and dreams are open to introspection, 19; rules of introspection, "be normal," 21; "be minutely observant," 23; introspection under excitement, 22; introspection is only a form of observation, 23; the nature of experimental introspection, 34-7; experimental introspection, 152, 171-2; experimental introspection and a free will, 285-6; mentioned, 286.

Intuitions, the nature of, 213-5.

Involuntariness in bodily and mental work, 73, 294, 296, 310.

Judgment, its place in habit, 103-5, 248; the growth of judgment, 115; its relation to disturbances, 262; its place in choice, 308; its place in psychology, 320, 504; judgment as imaged, 323; its place in dreams, 452, 456, 466.

Kinesthetic equivalents, mentioned, 292.

Knowing, meaning of the term, 82-3n, 504; knowing as distinguished from re-developing, 207.

Knowledge, the method of its growth, 76-7; knowledge is mostly a social product, 159, 295, 420, 420, 426, 464, 480.

Language; word ideas as such, 126; words rich and poor in meaning, 126-7; speech and thought, 130-1; words are only visual, audible, or motile images, 131; the nature of language, 138-9; the language of the adult, 153-4; words are readily re-instated, 165; thinking in words, 204-5; why sentences are difficult to re-collect, 231; words and volitions, 202, 283-4, 294, 300; the presence of verbal images in re-developing what is unlike, 286; verbal aims, 292; growth of language in the child, 410-2; the acquisition of language, 413-7; the building up of sentences, 414-6; deliberateness in speech, 421-2.

Leisure, only rational as the complement of work, 497-8.

Life and no life, 361-3; life as an organic whole, 501.

Listening, as a case of effort, 317.

Localisation of systems, mentioned, 178n, 201, 203; description of the process, 209.

Localised sensations and comfort and discomfort, 242.

Logic, as a matter of temperament, 351.

Man, as primarily a social being, 405-6.

Matter and mind, the relation of, 324-6, 367-70, 504; mentioned, 365.

Memory, as a poor copy of observation, 19; as dependent on attention, 81-2; instantaneous memory, 920; memory is always the outcome of teleological effort, 950; memory is assisted by interconnection in thought, 96; difficulties as regards the memory in habits, 101-2; memory and exercise, 103; memory tests, 103; re-production of motion and detail, 131-3; the memory contents dwindle, 134; memory and recency, 142; words as easily remembered, 165; the process of combining as a form of memory, 167, 496; primary systems imply re-collection, 173-6; the memory continues faithful and complete for some time, 176-8; the case of sudden re-collection, 179-81; recency, neural excitement and neural momentum as factors in memory, 178-83; the memory fades slowly but surely, 184-5; the slow growth of the memory, 185; cramming, 185-6; we forget most things, 186-90; our earliest re-collections, 180; re-collections of a life time, 186-7; memories survive by repeated revival, 188, 505; memories live for about two years, 189; the process of forgetting, 190-1; memory is attention to surviving traces, 191-2; recognition is easier than re-collection, 192; there are no fixed and complete images, 192-3; the time taken in re-developing, 193; classes of memories, 195-6; the matter of memory, 197-205; the matter of memory and sensation is one, 200; motion as imaged, 203-4; thinking in words, 204-5; the growth of the memory, 205-7; re-developing distinguished from knowing, 207; the elements of memory, 207-8; the nature of a perfect memory, 208-9; recognition without re-collection, 209-14; memory and reality distinguished, 209, 335; after-images, 210-1; the superiority of after-images over ordinary images, 210; dim and illusory images, and intuitions, 213-5, 420, 422; memory as organised, 215-7; novelty and familiarity, 217-8; imperfect re-collection, 218-9; re-collection is partial, 219; why the memory leans forward, 219-20; vividness is no test of objectivity, 220-2; well known and recent images, 220-1; images generally lack a setting, 221; the waning of the images, 222; the Present distinguished, 222-4; we do not re-develop everything, 224; effort is an essential in memory, 224-5; monotonous activity and memory, 225; a general memory scarcely exists outside a developed society, 226; the evolution of the memory, 226; repetition and memory, 226; effort in re-collection must be intermittent, 226-7; the old in the new, 228; the advantage of direct observation, 228; what has only extension is difficult to re-develop, 230-1;
INDEX OF SUBJECTS

...determine the drift of thought, 276-9; depressing and spirited moods, 278; moods and the various stages of life, 279; mentioned, 420, 505.

Motion, meaning of the term, 195-7; the place of motile systems in the memory, 197-205.

Motion, as sensed, 203; as imaged, 203-4; the nature of motion, 326-7; the "sense" of motion, 327.

Motives, the nature of, 250; mentioned, 252, 266, 312; choice from weaker motives, 305-7; needs are the real motives, 307; action from special motives, 307-8.

Motor aspect in emotion, 270.

Muscular activity as a part of brain functioning, 233n; the muscular strain as an essential in sensing and thinking, 428, 499; the muscular tone is lowered in dreams, 456, 466; motor activity as attention-determined, 499-500.

Music, the aesthetic aspect of, 492; the music of birds, 492.

Necessity, mentioned, 326, 349-51.

Needs, meaning of the term, 42, 297; satisfaction of a need, meaning of the phrase, 42; the pressure of needs, 57; mentioned, 82, 109, 127, 168-9, 280, 308, 420, 429, 431; needs in habits, 101; thought represents the satisfaction of needs, 151-2, 463; continuity of thought as due to needs, 159; the origin of needs and their classification, 160-1; only a strong need overcomes obstacles, 166; secondary needs, 169-70; needs determine our lines of activity, 249, 505, 506; needs, and not disturbances, account for activity, 250-1, 252; pains which are not connected with normal needs are ignored, 254n; the suppression of disturbances is due to hereditary needs, 254; minimal disturbances do not interfere with needs, 258; needs as supported by excitement and by the necessity for being active, 278-9; needs, belief and possibility, 283; periodic needs, 284, 294, 329-30, 407-8; the classification of needs, 284, 294-5, 408-9; needs determine the will, 286; the nature of needs, 296-7, 506; we are not necessarily aware of our needs, 297; definition of needs, 297; needs are the real motives, 307; needs and values, 310; psychology only knows of needs, 319; psychology is the science of needs, 381; the self as the centre of needs, 392; the bodily aspect of needs, 334; needs and genius, 396-7; needs and character, 407-9; needs and association, 424; needs in dream-life, 449; distinctive needs in men and animals, 462-4; obstacles to the satisfaction of needs,
INDEX OF SUBJECTS

466; the place of needs in attention-determined activity, 468, 469.
Negative case, the, meaning of the phrase, 238.
Nervous system, the, and bodily activity, 309.
Neural, appertaining to the brain.
Neutral activity, nature of, 266-7.
Notion, meaning of the term, 41, 367.
Nonmna, the nature of, 327-8, 352, 356n, 369-70.
Novels, why they are read, 497.
Novelty and familiarity, the nature of, 217-8; their place in aesthetics, 473, 844.

OBJECT, meaning of the term, 41, 367.
Observation, the nature of the process of, 20; observation as systematically applied, 25-30; observation and attention, 75; observation is teleologically determined, 133, 193; observation as essentially organised, 192-3; correct observation is the art of the specialist, 194; observation is guided by previous observation, 194; the primary and secondary field of observation are alike in extent, 203, 428; the advantage of direct observation in the storing of the memory, 228-9; the value of direct observation, 235; observation of the process of thought, 423-4; observation of familiar thoughts, 424n.

Old age, mentioned, 196, 294.
Opposed disturbance, meaning of the phrase, 280; mentioned, 303, 318.
Oppositive case, the, meaning of the phrase, 237.

Optimism and pessimism, discussed, 254-5.
Orator, the art of the, and the beautiful, 401.
Order, the nature of, 348-9.
Organised activity, meaning of the phrase, 91.
Organised reaction, meaning of the phrase, 91. (See also Habit.)
Organised systems, meaning of the phrase, 42; sensations as always given in organised systems, 56.
Organised trend, meaning of the phrase, 91.

Other minds, 357-9.

PAIN. (See Disturbance.)
Pain nerves, alleged existence of, 245.
Rain sensations and other sensations, 242.
Parallelism, theory of, criticised, 172, 331, 332-3, 369, 370.
Parrots, as talking unconnectedly, 284n.
Part-connection, or belief, meaning of the term, 164, 217.
Pasing needs, described, 284, 295, 409, 505.
Past, as imaged, mentioned, 356.
Peculiar needs, described, 284, 295, 505; mentioned, 409.
Percept, or to perceive, meaning of the terms, 41, 122n.
Perception, the nature of, 174-5, 504.
Perennial needs, described, 284, 294, 329-30, 407-8, 505.
Persistence in nature, 355-6.
Personal needs, 284, 295, 408-9, 505.
Personality and the freedom of the will, 267n.
Pessimism and optimism, discussed, 254-5.
Phantasm, the nature of, 433-6; discussed, 450-62.
Phenomena, the nature of, 327-8, 352, 356, 369.
Physical science and matter, 324; the reconstruction of physical science, 330; physical science and psychology, 366-7.
Physiological psychology, its present state, 9.
Physiology, yet of little use to psychology, 45n; attention as physiologically defined, 64; the physiology of attention, 71, 428; the physiology of thought, 145; the physiological aspect of memory, 231-4; the physiology of pleasure-pain, 244n.
Play, nature of, 499-500; motor activity as essential to thought and action, 499; definition of play, 500; work and play, 501.

Pleasure. (See Disturbance.)
Points of view, their relation to needs and disturbances, 254-5.
Political needs, described, 284, 295, 505; mentioned, 409.
Power, meaning of the term, 353; mentioned, 365.
Present, the nature of the, 222-4.
Presentations, criticism of the theory of, 134-6, 332-3; mentioned, 173, 369, 428, 429.
Primary systems, meaning of the terms, 40, 203; the matter of primary and secondary systems is one, 200-1; primary and secondary systems distinguished, 209.
Principles of action as overruling disturbances, 273-6.
Prose and poetry, the aesthetics of, 487-91; prose and poetry distinguished, 490-1.
Psychical and physical, distinction between, 356.
Psychology, recent employment of the term, 38; the foundations of present-day psychology examined, 3-10; reflexive and physiological psychology are unsatisfactory, 9; approaches to the study of psychology, 14-5; psychology as a practical subject, 20-3; definition of psychology, 38, 296, 366; the extent of the literature of psychology consulted, 38; a new psychological terminology, 39-42; psychology and analysis, 275; psychology and a free will, 286; what psychology treats of, 297, 507; is psychology individualistic? 311; the
INDEX OF SUBJECTS 519

dangers of a popular psychology, 313; the tripartite division in psychology examined, 318-21; psychology as the science of needs, 321; psychology and physical science, 366-7; general psychology, 368.

Psycho-physics, referred to, 9, 722, 259; the theory of psycho-physical parallelism discussed, 333-5; psycho-physical methods criticised, 447.

QUALITY, the nature of, 53.
Quantitative psychology, 31-4; criticism of, 32-4, 447; quantitative and qualitative psychology, 447.

RACES, psychology of, referred to, 3, 261; Raco, mentioned, 270.
295, 407, 478, 482, 491.
Read, the process in learning to, 220.
Reality, the place of, in the world series, 209; vividness is no test of reality, 220-2; appearance and reality, 324, 327-8, 353-6.
Reason, objection to the term, 353; the place of reasoning in the dream-state, 441-3; reason in animals, 465; reason in children, 466; the nature of reason, 466, 503; reasoning as need-determined re-development, 481.
Recency, mentioned, 141, 144, 149, 153, 279, 283, 420, 505; the problem of recency, 142-3; the nature of, 181-2; recency memory, 206; recency in dreams, 439-40, 449-50, 456.
Recognition, its superiority over re-collection, 192; mentioned, 194, 207; recognition memory, 206; recognition without re-collection, 308, 463; recognition as dependent on stability of character, 406; primary and secondary recollection distinguished, 403.
Relations, the nature of, 365.
Repetition, tendency to, in children, 206; its place in the process of re-collection, 226, 234; mentioned, 232.
Representation, the term as used by Ward, 175.
Resolutions, the nature of, 95n; mentioned, 305.
Resolves, mentioned, 246, 312; the limitations to resolves, 247; resolves, as an item in an organised series, 299; the nature of resolves, 301.
Rest, as excluding all sensations, 55.
Retrospection as a psychological method, 15; retrospection is introspection, 19.
Rules, to be applied in observation, re-collection and thought: opposite case, negative case, rule of degree and rule of variety, 237-8.

SCIENCE, as due to the process of economisation, 127; the attitude of science, 364; our notions of existence, 593-4.
Secondary systems, meaning of the phrase, 40, 203; the matter of primary and secondary systems is one, 200-1, 324n; primary and secondary systems distinguished, 209, 343; the primary and the secondary field alike in extent, 222.
Self, the nature of, 310-1, 328-30, 504.
Self-determined change, meaning of the phrase, 42.
Semi-advanced systems, meaning of the phrase, 41, 59, 503.
Semi-connection, the nature of, 163-4.
Semi-opposed disturbance, meaning of the phrase, 280; mentioned, 303, 318.
Sensations, the beginning or the threshold of, 47-9; passing effects of casual sensations, 48; sensations are absent when the attention is diverted, 49; the sources in nerve-endings of sensations and images, 49; the sense problem, 50-7; sensations in the child, 51, 409-10; sensations are said to possess intensity, quality, feeling tone, extensity and duration, 51; the term intensity is not easily applied to sensations, 512; the common factor in sensations, 53; sensations have no primitive quality of extensity, 55; six important conclusions as to the nature of sensations, 55-7; classification of sensations into elementary, semi-advanced and advanced systems, 57-9, 249, 503; absence of sensations in habits, 100; sensations are one with images, 136-7; sensations do not come first in psychology, 173; sensations, as defined by Sully, 174; the nature of sensations, 174-5, 207-8, 503; the matter of sensation and memory is one, 200; pleasure and pain are neither sensations nor feelings, 240-6, 276, 303; sensations and feeling tone, 242; localised pain sensations and comfort and discomfort, 242; minimal sensations, 316n, 461; feelings, emotions and sensations are fundamentally one, 319; the "sense" of sensation, 337; indirect factors in sensations, 335; discrimination and subconscious as regards sensations, 420; thought is dependent on sensory stimuli, 426; muscular strain as an essential in sensation, 428; the moulding of sensations, 430-6; sight sensations with closed eyes, 432-3. (See also Sense problem.)
Sense apparatus, the, explains nothing, 504.
"Sense" of effort is absent when the attention is diverted, 50-7.
"Sense" of motion, mentioned, 327.
Sense problem, the, 50-7; there are more than five senses, 50; the current classification of sensations is unsatisfactory, 50; all the senses except those of sight and hearing constitute one group, 50; the last two form a separate group in the adult, 51; attempts at unifying the senses, 51, 342; the senses shade into one another, 53; the classification of systems, 57; simultaneous sensing
INDEX OF SUBJECTS

and imaging, 196-7; “sensory” and “physical” material, 331; the sense material is fundamentally one, 353-4; the close relation of the various sensations, 354-5; the sensory tone is lowered in dreams, 456, 466. (See also Sensations.)

Sentience, meaning of the term, 82n.

Setting, in dreams, 204, 450-1, 456; as a means of classifying systems, 14, 209; a setting is usually absent in images, 221.

Sight, its place among other sensations, 50-1, 58-9, 353-5; as objective, reflected and imagined, 322-3; the space of sight and touch, 347.

Similarity, association by, 141-52, 285, 424.

Similars, suggestion of, mentioned, 147.

Simplest case, its place in observation, memory and thought, 236-8.

Sleep, dreamless, 67, 450, 451; sleep is induced through rest or monotony, 425; sleep as due to absence of effort, 426; the state between waking and sleeping, 430-6; inattention leads to sleep, 457.

Smells, their place among other sensations, 50-1, 58-9, 353-5; smell imagery, mentioned, 188; the nature of, 197-205; smells are difficult to re-develop, 198; smells in dreams, 440.

Somnambulism, mentioned, 433.

Sonnets, the, of Shakespeare analysed, 373-88.

Space, as a relation, 209; space remains the same whether objective, reflected or imagined, 323; the nature of space, 336-47; the narrow range of vision, 339; the suggested size of objects, 336-7; three-dimensional space, 337-40; the notion of space in infants, 338; movement and the sense of space, 338n; the looking-glass, monocular and binocular vision, the stereoscope and shadows, 339; pictures and the three dimensions, 339-40; two-dimensional space, 340-2; the development of the sense of space, 342; what is meant by three dimensions? 342; the problem of a fourth dimension, 342; empty space, 343; space as a relation between systems, 343; the space of touch, sound, etc., 343-4; imagined space, 344; space as a single expanse, 345; minor characteristics as to space, 345-6; the space of sight and touch, 347.

Speculation, and investigation, 10, 370; speculation as an unsatisfactory method, 428; speculation in animal psychology, 465.

Spiritualism, mentioned, 259, 433; spiritualism and hallucinations, 435; spiritualism discussed, 456-62; the method of going into trance, 457-8; the claims of “mediums,” 459-60; incorrect revelations, 459; the effects of minimal attention, 461; “physical manifestations,” 461; the mediumistic type, 461; experience necessary in this subject, 462.

Spontaneity, the doctrine of, criticized, 418.

Standpoint, its place in observation, memory and thought, 235-8.

Stereoscope, the, and binocular vision, 212.

Stigmata, mentioned, 257.

Strain, as felt, 61.

Sub-combination, meaning of the term, 175.

Sub-conscious activity, process of, 82-4; mentioned, 153, 293; sub-conscious influence, 215; its nature and limitations, 420.

Subject. (See Ego.)

Subjective, feelings as, 242-3; disturbances are not subjective, 257, 260; subjective states and the will, 303; subjective activity, mentioned, 333, 352.

Sublime, the beautiful and, 499-70, 482-3; Burke, on the sublime, 470; Ruskin, on the sublime in architecture, 478-9.

Summary of the whole work, 503-7.

Summary feeling, meaning of the phrase, 41; mentioned, 162, 177, 193, 197, 207, 452.

Surprise, as determined organically to some extent, 263-4; mentioned, 270; the effort factor in surprise, 317.

Syllogism, the nature of the, 157; mentioned, 300.

System, meaning of the term, 39, 40, 503; the term includes also desires, emotions, volitions and thoughts, 125; primary and secondary systems distinguished, 209; psychology only reveals systems in various combinations, 243.

Systems, as distributed, ch. 2; as organised, ch. 3; as need-satisfying, ch. 4; as re-developed, ch. 5; as disturbed, ch. 6; as need-determined, ch. 7; as unified, ch. 8; as individualised, ch. 9; as classified, ch. 10; as attention-determined, ch. 11.

Tastes, their place among other sensations, 50-1, 58-9, 353-5; as difficult to re-develop, 198; taste-dreams, 440.

Telepathy, mentioned, 436.

Terminology, psychological, 39-42; the chief pillars of a solid terminology, 40.

Terror, its relation to effort, 317.

Thinghood, meaning of the term, 243, 503.

Third dimension, as imaged, 209-4; as three-dimensional space, 337-40; what is meant by three dimensions? 342.

Thoughts all thought is organised, 56, 57, 114-20; thought and speech, 130-1, 424; thought represents the satisfaction of needs, 151-2, 462, 405; the thought currency has no standard value, 154; general methods in thought, 155-9; thought as need-determined, 161; thought is the reproduction of what is relevant, 167, 496; habits as the basis of thought, 167-9; interdependence and
INDEX OF SUBJECTS

interaction in thought, 169-70; the matter of thought, 197-205; the matter of thought and action is one, 200-1; the normal thought process is distinguished by a low degree and restricted range of activity, 201; thinking in words, 204-5; the imperfectness of average thought, 225; thought as tending to actualise itself, 258-9; mentioned, 266, 283, 503; moods largely determine the drift of thought, 276-9; thought as compulsory, 278; subtle thoughts and simple acts are both organised, 293; thought and effort, 314, 466; normal thinking requires effort, 316-7; thought as imaged, 323; the highest class of thought, 418-20; sub-conscious thought analysed, 420; deliberateness in thought, 421-2; the nature of average thought, 422-5; solitary feelings and images as representing thought, 425; thought as dependent on afferent activity, 425-8; muscular strain as an essential in thought, 428; efferent activity and thought, 428-9; central activity and thought, 429-30; thought in dreaming, 448-9, 450; thought in trance, 453; thought as attention-determined, 499-9.

Thought reading, the principle of, 259; its explanation, 491.

Tickling, the psychology of, 251, 495.

Time, as a relationship between systems, 209, 348.

Touch systems, their place among other systems, 50-1, 58-9, 353-5, 503; as difficult to re-develop, 198; touch systems in dreams, 440.

Transformed systems, meaning of the phrase, 41.

Travel, why it fascinates, 427.

Trial and error, as a method of thought, 419.

Tripartite division in psychology, 318-21.

Ugliness, the nature of, 471.

Unconscious activity, discussed, 82-4, 100, 420.

Unconscious mind, mentioned, 84.

Understanding, the objection to the term, 353.

Unexhausted systems, meaning of the phrase, 41, 367, 504; mentioned, 135, 176, 297, 329, 331.

Unitary conception of things, 355, 369.

Units of various degrees, their nature, 175.

Unlike, the re-collection of what is, 143, 286.

Vision, the physiology of, 345-6; the nature of closed-eye vision, 431-3; vividness in closed-eye vision, 454-6; closed-eye vision in mediums, 458.

Visual, meaning of the term, 195-7; the place of visual systems in the memory, 197-205.

Vividness is no test of reality, 220-2.

Volutition. (See Will.)

Waking; the state between waking and sleeping, 430-6.

Why, meaning of the terms, 365.

Will, and effort, their relation, 61-2; the supposed omnipotence of the will, 247; mentioned, 266, 503; personality and the freedom of the will, 267; experimental results, 282-6; the question of a free will, 285-6, 351-2; effort and will, 285; psychology and a free will, 286; the effect of volitions, 286-7; the will is limited by capacity, 286-7; the will as absolute, 289-8; the process in willing, 287-8; definition of willing, 288, 312; movement follows when a need flows into muscular channels, 289-90; criticism of the ideo-motor theory, 291; uniqueness in willing, 291; degrees in willing, 291; keen willing may have no effect, 291; to succeed, we must will continuously, arduously and repeatedly, 291; the purity of the will, 292; willing and aiming, 292-3; voluntary, involuntary and non-voluntary activity, 293-6; actions cannot be divided into voluntary and involuntary, 294; strenuous willing and awareness or deliberation, 295; contradictory needs, 295-6, 302; involuntary action, 296; deprecating and appreciating the will value, 297-9; volitions and their results, 299; the rule for the training of the will, 299; the nature of deliberation, 299-301; the nature of resolves, 301; will and desire distinguished, 302; neural disturbances and willing, 302-5; acts of will are frequently absent, 305; choice from weaker motive, 305-7; action from special motives, 307-8; the self as willing, 309-11; will as assertion of a need, 311-3; all willing is organised, 313; felt effort, 313-5; the "sense" of effort, 315-8; the will as a department of psychology, 319-21; volitions as imaged, 323; volitions in dreams, 438.

Witchcraft, mentioned, 433.

Wonder, the state of, 270.

Work, mentioned, 64; as a prime necessity of our being, 429; leisure and work, 498; imagining as a preparation for work, 498; the child's work consists principally in play, 499; work and play, 501.
INDEX OF AUTHORS.

The letter "n" added to the number of a page indicates that the reference is to a footnote.

ABBOTT, on the nature of space, 337.
Abercrombie, mentioned, 136, 337, 443, 445n, 454.
Adam, mentioned, 14n.
Addison, mentioned, 491.
Alison, on the nature of the beautiful, 485.
Allen, on the nature of pleasure-pain, 243.
on the nature of genius, 395, 401; mentioned, 400, 501, 502; on the nature of the beautiful, 487.
Allin, 207, 502.
Angeil, mentioned, 89, 121, 197.
Angeley, Michael, mentioned, 396n.
Anonymous, mentioned, 374, 375n, 381.
Anonymous (Hall, G. S.), 462.
Aristotle, mentioned, 6, 170; on the value of good habits, 92n.
Arrêt, mentioned, 239, 501.
Arter, mentioned, 346.
Aschaffenburg, mentioned, 150.
Ashley, mentioned, 346.
Aubert, mentioned, 197.
Avenarius, mentioned, 121n.

BALON, on unscientific methods, 12; mentioned, 170, 490, 491; Bacon and Shakespeare, 393.
Bailey, on introspection, 18; on attention, 62; on the nature of space, 337.
Bain, on the principles of association, 6-7; on writing one's signature with eyes closed, 21n; mentioned, 34, 64, 114, 146, 147, 151, 171, 174, 197, 243n, 267, 281, 283n, 301, 321, 425n, 501-2; on attention, 62; on the recollection of what is salient, 148; on the method of trial and error, 149; on recency, 181; on ideas as copies of past experiences, 196; on the improvement of the memory, 238; on the nature of pleasure-pain, 243; on the nature of emotions, 271; on the process of willing, 288; on the nature of desire, 302; on disturbances as motives, 305; on the distinction between the object world and the subject world, 336; on sight as dependent on touch, 346, 347; on the study of the subject as a purely individual, 359; on matter and mind, 368; on the highest beauty of visible objects as obtained by lustre, 471-2; on the nature of the Comic, 495.
Baldwin, on the principles of association, 7; on the importance of theories, 13; on the defects of introspection, 18; on the nature of attention, 62; on attention as voluntary, 66; mentioned, 197, 234, 403; on the process of willing, 288-9; on the nature of hallucinations, 339; on the rapidity of dreams, 453; on unity and variety in the beautiful, 472; on a characteristic in the beautiful, 486; on the nature of the Comic, 495-6.
Ballet, mentioned, 205.
Barnes, mentioned, 374, 375n, 387; quoted, 380, 381, 382.
Barnfield, mentioned, 374, 375n, 387.
Bastian, mentioned, 9, 64, 321.
Baynes, mentioned, 389.
Beaumont, mentioned, 393.
Beaussis, mentioned, 121, 261n; on the nature of pleasure-pain, 243-4; on extreme forms of pain, 255.
Beethoven, as a man of genius, 401.
Bénard, mentioned, 502.

Spitta, on dreams as isolating men, 431; on feelings as present in sleep, 438; on the ethics of dreams, 445; on the rapidity of dreams, 453; mentioned, 454.
Stanley, mentioned, 90, 281; on the nature of pleasure-pain, 246.
Stein, mentioned, 462.
Stephen, mentioned, 308.
Sternberg, mentioned, 50n.
Stetson, mentioned, 234.
Stevens, mentioned, 348n.
Stewart, on the field of attention, 60n; on attending to one thing at a time, 79; on attention in habits, 80n; on the nature of habit, 102; mentioned, 128; on monody as leading to sleep, 427-8n; on the rapidity of dreams, 453; on engrossment as producing liveliness, 455.
Storr, mentioned, 281.
Stout, on the principles of association, 7, 147; mentioned, 15n, 65, 94n, 126, 129, 135, 149, 150, 152, 175, 170, 226, 281n, 321, 370n; on introspection, 17; on the nature of experiment, 35; on the sphere of attention, 61; on what characterises attention proper, 63; on attention as self-direction, 66; on sensory stimulation by attention, 69n; on attending to one thing at a time, 79n, 79, 99n; on absence of attention in habits, 80n; on attending to habits, 80n; on sub-consciousness as one with sentience, 82n; on factors producing changes in the attention, 88n; on the effects of habit, 92n; on habit as automatic action, 103n; on the effect of repetition, 103n; on the term "meaning," 123n; on the association of feelings, 125; on economisation, 127; on what constitutes an idea, 138; on sequence determined by associations, 140n; on the collection of what is salient, 143; on ideas and general trends, 156; on the aggressiveness of the percept, 222; on the nature of pleasure-pain, 246; on interest as attention, 250n; on the process in willing, 290; on the essence of will, 293; on
INDEX OF AUTHORS

experienced transition, 366n: his view on consciousness and phenomena, 369; on centres of practical interest, 431; on perceptual, ideational and conceptual process, 464.

Stratton, mentioned, 281, 347.

Stirner, on the localization of sensations, 55n; on the principles of association, 147: mentioned, 197; on motion as imaged, 204; on word images, 204-5; on pleasure-pain, 246; on the nature of space, 346n.

Strong, mentioned, 281.

Stumpf, on interest as attention, 250n, mentioned, 281, 347.

Sully, on the principle of association, 7; on the defects in introspection, 17; mentioned, 46n, 51n, 53n, 65, 114, 146, 150, 163n, 175, 242, 243n, 255, 257, 281, 293, 301, 311, 321, 347, 405n, 454, 450, 502; on the nature of attention, 63; on voluntary attention, 66; on the term "sub-consciousness," 82n; on the nature of dualism, 92n; on the nature of general ideas, 129; on perception, 140; on the fundamental law of association, 147; on the suggestion of similars, 147; on contiguous association, 147; on the conflict of suggestive tendencies, 148; attention and association, 150; on assimilation, 150; on sensations, perceptions and images, 174; on what characterizes a mood, 179n; on cramming, 186; on feelings as the subjective side of our experience, 243; on the nature of pleasure-pain, 246; on functional dispositions, 249n; on illusions of introspection, 262n; on anger as pleasurable, 278n; on the nature of emotion, 278; on the process in willing, 290-1; on the meaning of desire, 302; on conation as due to a disturbance, 305; on effort as an altering factor, 318; on the distinction between the external and the internal world, 336; on genius and precocity, 394; on genius and insanity, 402; on dreams as fanciful, 442; on the source of dream-materials, 455; on engrossment as intensifying liveliness in dreams, 455; on the nature of dreams, 456n; on congenital susceptibility in genius, 465; on the contemplative character of aesthetic enjoyment, 468n; on the beautiful and the useful, 470; on the place of pleasure in aesthetics, 470; on variety and unity in the beautiful, 472; on the nature of the Comic, 496.

Surrey, Earl of, quoted, 315.

Swift, mentioned, 90.

Sykes, mentioned, 456.

Symonds, mentioned, 388n.

Taine, on word ideas, 126: mentioned, 129, 390; on the principles of association, 147.

Talbot, mentioned, 89, 197, 234.

Tannery, mentioned, 456.

Tawney, mentioned, 347.

Tennyson, mentioned, 487.

Thackeray, mentioned, 491.

Thiey, mentioned, 46n.

Thompson, on the process in willing, 291.

Thorndike, his experiments with animals, 33, 485; on memory in animals, 463n; on the effect of experience in animals, 466; on the actions of animals, 466.

Tissié, on dreams as provoked by sensory impressions, 428n; on dreams and the abnormal state of the different organs, 438; on a curious dream, 454.

Titchener, on introspection as impossible, 18; mentioned, 24, 46n, 114, 178, 213, 440, 447; on the nature of experiments, 34; on the effect of attention, 63.

Tolstoj, mentioned, 374, 375n.

Tonnies, on philosophical terminology, 40.

Trawschohld, mentioned, 151.

Travis, mentioned, 286n.

Turner, mentioned, 175.

Twardowsky, mentioned, 136, 239.

Tycho Brahe, mentioned, 399.

Tyler, mentioned, 399.

Tyndall, on the use of hypotheses, 14; mentioned, 31.

Usherhorst, mentioned, 90.

Uhl, mentioned, 90.

Uphues, mentioned, 239.

Urbantschitsch, mentioned, 70n.

Vascilde, mentioned, 209n, 234n.

Venn, mentioned, 14, 347.

Verdon, on the growth and decay of memory, 124n; on the necessity of forgetting, 186; on the effect of time on our memories, 190n; on forgetting quickly, 225.

Vierordt, mentioned, 348n.

Vinci, Leonardo da, mentioned, 396n.

Vogt, mentioned, 121.

Voig, mentioned, 456.

Volkelt, on the nature of introspection, 20n; on dreams and the bodily organs, 438; mentioned, 438n.

Volkmann, mentioned, 4n, 8, 11, 37; on the definition of the term "hypothesis," 11; on the defects of the introspective method, 16; his psychology, 16n; on the meaning of attention, 63.

Voltaire, as a man of genius, 401.

Waitz, on introspection as only revealing what is past, 16.

Wallace, mentioned, 461.

Waller, mentioned, 65.

Walshe, mentioned, 403.

Ward, A. W., mentioned, 390; on the date of Marston's Antonio and Mellida, 391n.

Ward, James, mentioned, 15n, 30n, 129, 150, 151, 169, 171, 175, 207, 209n,
INDEX OF AUTHORS

220n, 242, 333, 335, 3350, 347; on introspection, 17; on extensity, 53; on animal habits, 74n; on the threshold of consciousness, 84; on use as blunting feeling and favouring intellection, 114; on infinitesimal presentations, 135; on the distinction between sensation and representation, 175; on the process of observation, 195n; on the process in willing, 291; on mind as explaining the unity, activity and regularity of nature, 325-6; on the principle of life as mental, 362-3; on Subject and Object, 369; on art as eschewing the abstract and speculative, 489n.

Ward, mentioned, 454.
Warren, mentioned, 234.
Washburn, mentioned, 65, 207, 213.
Watson, mentioned, 374, 375n, 384n; quoted, 377, 382, 386.
Weber, mentioned, 199n; his law defined by Fechner, 53.
Webster, mentioned, 393.
Wedd, mentioned, 440.
Whately, mentioned, 157.
Wheatstone, mentioned, 212.
Whewell, on an art of discovery, 13.
Whitehead, on matter as memorised aurally and visually, 234.

Whitaker, mentioned, 16n.
Wirth, mentioned, 281.
Wittaele, mentioned, 151.
Witmer, mentioned, 102.
Wolfe, on some experiments on memory, 234.
Woodworth, mentioned, 321; on the rapidity of dreams, 453.
Wordsworth, quoted, 376; mentioned, 379, 487.
Wren, mentioned, 398.
Wundt, on self-observation as affecting psychic processes, 16; on the nature of observation, 20; mentioned, 31, 34, 46n, 60n, 150, 151, 169, 175, 281, 311, 335n, 347, 462; on the nature of attention, 66; on the complexity of ideas, 135; on the principles of association, 144n; on apperception, 152; on a characteristic of memory, 193; on localisation in time, 209n; on theoretical interests as falsifying introspection, 285; on willing and choosing, 291.
Wyndham, mentioned, 388, 389.

Ziegler, mentioned, 281.
Ziehen, mentioned, 222; on the nature of what is psychical, 325n.
Zoroaster, mentioned, 840.
Zwaardemaker, mentioned, 198n.
