INDEX.

ALU
ALUMINIUM
BRONZE, 97
Ash timber, 108

BARRITT'S METAL, 98
Beans and girders, 157, 159
- cylindrical, stiffness of, 181
- strength of, 170
- flexible, made rigid, 8
- of uniform strength, 172
- rectangular, deflection of, 130
- solid, 169
- stiffness of, 181
- strongest form of, 170
- rigid, 8
- secure fixing at ends of, 160
- square, strength of, 170
- stiffness of, 181
- trussed, counterbraces, 210
- diagram of, 209
- movable lead on, 209
- stress of, 209
Beech timber, 109
Bell-metal, 98
- preservation of, 98
Boilers, arrangement of plates in, 247
- copper for, 79
- strength of, 252, 256
- testing of, 251
- tubes, small, 270
- tubular, 257, 258
- fire-box, 260
- smoke-box, 261
- stays, 260
- strength of, 258
- weakened by improper arrangement, 257
- wear through restlessness of, 257
Brass, 97
- composition of, 88
- effect of lead in, 88
- fusibility of, 88

CANTILEVERS, FLANGED, 172
Carbon in cast iron, 37
- wrought iron, percentage of, 48
Cast-iron, 30
- carbon in, 37
- closeness of structure, 35
- columns, 200
- with flat ends, 202
- compared with wrought iron, 30
- crude metal, 30
- depending on temperature, 44
- effect of repeated deflection, 128
- elasticity of, 38
- experiments with, 38, 39
- fluxes of, 30

CAS
Brass—cont
- specific gravity of, 88
- tenacity of, 89
- bridges, testing, 17
Bronze aluminium, 97
- casting of, 97
- composition of, 97
- cost of, 97
- experiments with, 97
- and gun-metal, 8
- compression of, 87
- experiments with, at Woolwich, 86
- exposure of, in furnace, 84
- furnace, test of, 86
- fusibility of, 84
- Mu-chenbrock's experiments with, 85
- Rennie's experiments with, 85
- smelting, 84
- specific gravity of, 83
- Wade's experiments with, 83, 86
Butt joints, 267

COL
Cast-iron—cont
- fluidity of, 35
- for castings, 35
- girders, 35, 107
- guns, 32
- in dry mould, 35
- testing machine, 32
- limit of stress of, 33
- liquid, 31
- mixing of, 32, 36
- Nova Scotia, 38
- obscure points of, 30
- use refractory, 30
- permanent elongation of, 37
- set of, 33, 38, 39
- proportion of carbon in, 32
- remelting of, 44
- rigidity of, 35
- rough testing of, 35
- specific gravity of, 27
- specimen, short, crushing of, 44
- strength of, 32, 34, 45
- tensile strength of, 33
- test bars, 36
- beam, 37
- testing by hydraulic press, 36
- six-feet bars, 37
- tests of, 36
- under impact, 45
Chains, proof strains of, 53
- sorts of, 153
- strength of, rules for, 154
- wrought iron, 52
Collapse, 250
- experiments by Fairbairn, 263
- with butt joints, 672
- experiments with overlap do, 267
- of circular tubes, 267
- elliptical tubes, 269
- resistance to, 262
Columns, 198
- cast-iron, 200
- with flat ends, 201
- rounded ends, 201
DEFLECTION and strength, constants of, 176
— of columns, 198
Double riveting, 247
Dry mould, cast iron in, 35

EDGES, knife, 17
Effect of lead and tin in braze, 88
— of repeated deflection on cast iron, 128
— temperature, 249
Elastic flexibility, 13
Elasticity, 3
— of aeriform bodies, 5
— an advantage, 7
— Hooke's law of, 4
— imperfect, 4
— limit of, 9, 11, 12, 22
— of cast iron, 12, 38, 128
— of copper and tin, 12
— hard steel, 12
— liquids, 5
— plastic materials, 5
— solids, 6, 7
— watch-spring, 5
— wrought iron, 61
— perfect, 3, 4, 5, 11, 17
— used up, 7
Elliptical tubes, collapse of, 269
Elm timber, 109
Examples of constants, 174, 175
Expansion and contraction in boilers, 250
Experiments, collapse of butt joints, 267
— overlap joints, 267
— Fairbairn's, 261
— of Railway Commission, 11, 22
— with aluminium bronze, 97
— bending bar, 28
— cast iron, 38, 39
Extension at weak point, 7

FLANGED cantilevers, 173
Flexible beam made rigid, 8
Flexure of columns, 198
Fluidity of cast iron, 35
Fluxes of cast iron, 30
Forces, triangle of, 208
Formulæ, 158
Foundation, cast-iron cylinder, 232
— centre support of, 236
— concrete, 230, 232

GIRDER, overhanging bearing, 185
— strength of, 187
Girders, cast-iron, 35, 167
— considered as a cantilever, 161
— — lever, 161
— — practically, 165
— deflection of, 180, 182
— — examples of, 182, 183, 184
— — when uniformly loaded, 182
— disposal of material in, 165
— experiments on, by Hodgkinson, 179
— flanged, 167, 169, 177
— deflection of, 180
— — strains of, 177
— neutral axis of section, 166
— resilience of, 186
— semi, deflection of, 181
— square and round tube, strength of, 171
— stiffness of, 181
— strength of, 160
— stress on, 168
— tubular, 159
— under different conditions, 162, 163, 164
Girders and beams, 157, 159
— cylindrical, stiffness of, 181
— — strength of, 170
— — of uniform strength, 172
— rectangular, deflection of, 180

| Riveted structures, 241 |
| Rivets, strength of, 241 |
| Roof-trees, strength of, 207 |

| Ropes, experiments with, 8 |
| — strength of, 155 |
| Rectangular beams and girders, strongest form of, 170 |
| — — deflection of, 180 |
| — — stiffness of, 181 |
| — wrought-iron columns, 202 |
| Rules for strength of chains, 153 |

| **SCREW BOLT**, strength of, 150 |
| Screws, square threaded, 193 |
| — strength of, 192 |
Index.

**SCR**
- Screws, strength of—cont
  - angular thread, 192
- — round top and bottom, 193
- — thread of, right-angled triangle, 193

**STR**
- Steam crane—cont.
  - diagrams of, 216, 217, 219, 225
  - for 30-ton load, 215
  - girders, strength of, 223
  - jib, construction of, 218, 219
  - pinion overhung, 228
  - pressure on guide rail, 217
  - side frames, 214, 225
  - strain on centre pivot, 218
  - — chain, 229
  - — guide rail, 226
  - — jib and tension rods, 218, 221
  - strength of shafts, 226
  - stress on guide-wheel shaft, 227
  - — side frames, 226

**TIM**
- Strength—cont.
  - — surplus, effect of, 150
  - — torsional, 27

- Stress in proportion to stretch, 277
  - — limit of, 11
  - — on 50-feet bar, 11
  - — joints, 257
  - — theory of, 276

- Structures, complex,
  - — strength of, 200
  - — hooped and solid, 276
  — riveted, 241

- Tanks, cast-iron, 273
  — hooped, 275
  — strength of, 274

- Teak timber, 112

- Temperature, dependence of cast-iron on, 44

- Tenacity of brass, 89
  — cast iron, 34

- Tensile strength of brass, 89
  — cast iron, 33

- Test bars of cast iron, 36

- Beam of cast iron, 37

- Tests of cast iron, 36

- Testing boilers, 258
  — bridges, 17
  — by gauge, 21
  — impact, 12
  — lever, 15
  — torsion, 26

- Care necessary in, 18

- cast iron by hydraulic press, 36
  — Machine, 10, 17
  — adjustment of, 19, 26
  — American, 15
  — balance of, 17
  — cast iron in, 32
  — compound lever, 14
  — compression by, 23
  — lever, 14
  — simple, 29
  — single lever, 14
  — strength of, 13
  — Woolwich, 14, 16

- Rectangular bars, 29

- Ten-feet bars of cast iron, 37

- Time an important element in, 10

- Weights, 18

- Thrust on triangular structure, 208

- Tie beam, 159

- Riga, 88

- Timber, 101
  — age of, 102
  — ash, 108
Index.

TIM

Timber—cont.
- beams, strength of, 121
- beech, 109
- change in form of, 104
- commercial value of, 102
- density of, 102
- elm, 109
- hornbeam, 110
- mahogany, 111
- medullary rays in, 104
- oak, 111
- pine and fir, 110
- resistance to crushing, 114, 115
- seasoning of, 103
- shearing of, 116
- shrinking of, 103
- strength of, 102
- teak, 112
- tenacity of, 113
- transverse strength of, 117
- under compression, 115
- torsion and shearing, 132, 137
- experiments on, 132, 135
- resistance to, 131
- torsional elasticity, 133
- stiffness, 133
- strength, 27
- of cast steel, 123
- of copper, 133
- of shifting, 111
- wrought iron, 131

Transverse flexure, experiments on, 127
- strength, experiments on, 123
- of iron, 122
- ratio of, 125

Travelling crane, overhead, 209

Triangle of forces, 208

Trussed beam, counter-braces, 210
- diagram of, 209
- movable head of, 209
- wires of, 209

Tube boilers, small, 270
- circular, collapse of, 267
- elliptical, collapse of, 269

Tubular boilers, 257, 258
- fire-box of, 260
- smoke-box of, 261
- stays of, 260
- strength of, 258

UNDER-GIRDERS,
- conditions of load, 160
- uniformity of sectional area of screw bolt, 149, 150
- section in chains, 152
- strength of beams and girders, 172
- use of constants, 173

WATCH-SPRING,
- elasticity of, 5

Wheels for transmitting power, 191
- wheel teeth of, 187
- adjustment of, 189
- cast iron, 188, 190
- examples of, 189
- malleable cast-iron, 101
- steel, 101
- strength of, 183
- wrought iron, 131

Wires, bundle of, 28
- wrought-iron, 28, 46
- affected by temperature, 59
- annealing, 52, 67
- appearance of fracture, 51
- behaviour of, 54
- broken suddenly, 51
- butt-welding, 56
- bulging, 67
- carbon, percentage of, 48
- care required in manufacture, 47
- cementation of, 47
- chained, 52
- change from cast iron, 46
- cold rolling, 49
- cold-short, 53
- columns, 202
- compared with cast iron, 39, 54
- compression of, 40
- conditions for welding, 57
- deflection of, 67
- difference in quality of, 47

WRO

Wrought-iron—cont.
- ductile property of, 52
- effect of overheating, 49
- of tube on, 61
- elasticity of, 61
- elastic limit of, 47
- equilibrium in, 29
- experiments with, 56
- for compression, 64
- 50-foot bars, 57
- to 63
- extension of, 61
- fibre of, 28, 50
- for columns, 204
- forging of, 48
- fracture of, 52
- hard and soft, 55
- in bar, 49, 56
- cylinder, 56
- loss of strength of, 56
- made with charcoal, 47
- malleable, 46
- mechanical impurities of, 47
- modulus of elasticity, 62
- permanent set of, 54
- piling, 47
- puddling of, 46
- purity of welding surface of, 49
- rectangular columns, 202
- red-short, 53
- rigidity of, 53
- rolling of, 47
- safe load for, 53
- scarf joints, 56
- soft, 48
- specific gravity of, after compression, 67
- steely, 49
- strength at right angles to fibre, 50
- of, 47, 50, 204
- strength of thin plates, 5
- welds, 50
- testing for hardness of, 48
- ultimate strength of, 49
- under compression, 63
- unlike wood, 28
- welding of, 46
- when turned, 49
- wire-drawn, 54

London: Printed by Spottiswoode and Co., New-Street Square and Parliament Street
