QUESTIONS AND ANSWERS
in
BOOK-KEEPING AND ACCOUNTING
(Second Edition)

The work embodies (within 600 pages) an authentic and most comprehensive exposition of the Science of Accounting—Elementary and Advanced—in the shape of Questions and Answers. The questions are arranged and graded in their natural line of order and the answers give definite and plain guidance on every conceivable point likely to occasion doubt or difficulty to students. It covers the entire range of the subject in its theoretical and practical aspects and is thoroughly up-to-date.

As a Professor and Examiner of Accounting for a period extending over twenty-seven years, the author has had innumerable opportunities of coming in close contact with several thousands of students, and has always been impressed with the fact that the failure on the part of a large majority of students arises not from want of any knowledge of the subject, but from inability to give expression to such knowledge in appropriate language. Besides, the method of acquiring and imparting knowledge in the form of questions and answers has stood the test of time, and experience has shown that a technical subject like Accounting, if presented in this shape, is capable of being more readily grasped than in the form of an ordinary text-book.

The present work is, therefore, designed in its entirety in questions and answers with a two-fold purpose in view, firstly, to enable any student or businessman to acquire a thorough practical insight into the science of Accounting, in all its varied phases, within a short space of time without the aid of a teacher and with the least possible labour, and, secondly, to serve as an aid to expression.

Whereas the work commences with a discussion of the fundamentals of Book-keeping, the advanced phase of Accounting including Branch Accounts, Bank Accounts, Insurance Accounts, Bankruptcy Accounts, Liquidation Accounts, Holding Companies’ Accounts and Factory Organization and Cost Accounting have been most exhaustively dealt with. It serves as an invaluable link between the author’s “First Steps in Double-Entry Book-Keeping” and his “Advanced Accounting”.

THE STANDARD ACCOUNTANCY PUBLICATIONS, LTD.
ADVANCED ACCOUNTING
(Fifteenth Edition)

The Work is a thoroughly comprehensive and complete Text-Book embodying a most lucid, practical, and concise exposition of all the varied problems in Accounting, from the elementary to the most advanced. The order and method of treatment follow the plan adopted by the Author with conspicuous success in lecturing to large classes of Businessmen and Accounting Students during the last three decades. An important feature of this Work is the method of dealing with each point of doubt or difficulty by means of a short Illustration.

The Accounts of Indian Partnerships, Indian Joint Stock Companies, Indian Insurance Companies and Indian Bankruptcies form a special feature of this Work.

CONTENTS

CHAPTER
I. Fundamentals of Double-Entry.
