CONTENTS

CHAPTER I.
Evolution of Pathology ........................................ 1
   Indian School—Western School—Makers of Pathology—
      Pathological technique.

CHAPTER II.
How to Study Pathology ........................................ 29

CHAPTER III.
Health and Disease ............................................ 32
   Scope of pathology—terms used to describe morbid process.

CHAPTER IV.
Etiology of Diseases ........................................... 35
   Hereditary causes—acquired causes—indirect or predisposing
      causes—direct causes—mechanical—thermal—electricity—
      light—sound—chemical factors—auto-intoxication.

CHAPTER V.
Infection ......................................................... 52
   Definition—adaptation.

CHAPTER VI.
Fungi—Moulds .................................................... 56
   Hyphomycetes—blastomycetes.

CHAPTER VII.
Schizomycetes or Bacteria .................................... 65
   Part played by bacteria in nature—products of bacteria—
      classification of bacteria—effects of various conditions
      on the growth and life of bacteria—the common nutrient
      media—special culture media—culture of anaerobic
      organisms.

CHAPTER VIII.
Study of the Bacteria .......................................... 86
   Morphology—biology—staining reactions—cultural reac-
      tions—sterilisation—incubation of culture—serological
      reactions—inoculation of animals.
CHAPTER IX.

Special Bacteriology—Cocci

Points to mention in describing the bacteria—staphylococcus—streptococcus—pneumococcus—micrococcus tetragena—gonococcus—meningococcus—micrococcus catarrhalis—micrococcus melitensis.

CHAPTER X.

Bacilli

CHAPTER XI.

Spirilla and Spirochætes

CHAPTER XII.

Viruses and Virus diseases

Filterable viruses—cell-inclusions—Diseases caused by the filterable viruses—considerations of some technical points.

CHAPTER XIII.

Characters used for confirmation of the most important pathogenic bacteria

CHAPTER XIV.

Protozoa

CHAPTER XV.

**Mastigophora** ... 195

CHAPTER XVI.

**Sporozoa and Ciliophora** ... 215

CHAPTER XVII.

**Helminthes or Worms** ... 233

CHAPTER XVIII.

**Arthropoda** ... 258

CHAPTER XIX.

**Snakes** ... 269
CHAPTER XX.

Incidence of Infectious Diseases ........................................ 272

Malaria—kala-azar—cholera—smallpox—tuberculosis—
leprosy—plague—hookworm.

CHAPTER XXI.

Examination of Urine ....................................................... 281

Collection—quantity—colour—consistence—odour—density—
reaction—albumen—blood—bile—sugar—acetone—diabetic
acid—oxybutyric acid—indican—chyle—pus—urea—
chlorides—total salts—Ehrlich’s diazo reaction—uric
acid—urates—phosphates—oxalates—carbonates—blood
corpuscles—epithelium—casts—bacteriological examination.

Examination of Blood ....................................................... 291

Enumeration of corpuscles—differential leucocyte count—
estimation of haemoglobin—parasites in blood—liquid
blood film—coagulation time of blood—bacteriological
examination of blood—biochemical examination—blood
chemistry in modern medicine—Widal reaction—deter-
mination of the opsonic index—Wassermann reaction—
Khan’s precipitation test—Test for blood groups.

Examination of Faeces ....................................................... 318

Collection of material—physical examination—chemical
examination—microscopical examination—bacteriological
examination—examination for protozoa.

Examination of Cerebrospinal Fluid ...................................... 323

Collection—physical—chemical—cytological—bacteriological
—serological examinations.

General Bacteriological Examination .................................... 325

Throat—sputum—urine—pus—smear for spirochaetes.
CONTENTS

CHAPTER XXII.

General Methods for Bacteriological Work . . . . 329
Preparation of wet film—dry film—methods of staining—cultural methods—inoculation to animals—agglutination tests—isolation of bacteria-characters used for confirmation of the most important pathogenic bacteria—laboratory diagnosis of infectious diseases.

CHAPTER XXIII.

Immunity . . . . . . . . . . . . . 336

CHAPTER XXIV.

Fever . . . . . . . . . . . . . . 368

CHAPTER XXV.

Inflammation . . . . . . . . . . . 371
Concept of inflammation—phenomenon of inflammation—inflammation of nonvascular structure—etiology—clinical manifestation of inflammation—classification of inflammation—inflammation of special tissues—suppuration—

CHAPTER XXVI.

Regenerative Tissue Changes . . . . . . . . . . . 396
The healing process—healing of special structures.

CHAPTER XXVII.

Specific Granulomata . . . . . . . . . . . . . . . . . 401
Tuberculosis—syphilis—leprosy—glanders—actinomycosis—mycetoma—lymphogranuloma—rhinoscleroma,
CHAPTER XXVIII.

Tumour

CHAPTER XXIX.

Epithelial Tumours

CHAPTER XXX.

The Teratomata and the Cysts

CHAPTER XXXI.

Disturbances of Circulation

Hyperæmia—anæmia—Hæmorrhage—Œdema or dropsy—Stasis—Thrombosis—embolism—Metastasis.

CHAPTER XXXII.

Disturbances of Nutrition and Metabolism

CONTENTS

CHAPTER XXXIII.

Diseases of the Blood . . . . . 575
General considerations—Pernicious anæmia—Aplastic anæmia—sickle-cell anæmia—chlorosis—lukæmia.

CHAPTER XXXIV.

Diseases of the Circulatory System . . . . . 582
Pericarditis—endocarditis—atherosclerosis—syphilitic aortitis aneurism.

CHAPTER XXXV.

Meningitis 596

CHAPTER XXXVI.

Diseases of the Respiratory System . . . . . 598
Anatomical and physiological considerations of the lungs—acute lobar pneumonia—broncho-pneumonia—Tuberculosis of the lung—pneumothorax.

CHAPTER XXXVII.

Diseases of the Kidney . . . . . 609
Nephritis—Arteriosclerotic kidney—cholera kidney.

CHAPTER XXXVIII.

Diseases of the Alimentary Tract . . . . . 623
Peptic ulcers—cholera—Typhoid ulcers—Tuberculous ulcers amœbic dysentery—bacillary dysentery.

CHAPTER XXXIX.

Cirrhosis of Liver . . . 635
CHAPTER XL.

Diseases of Unknown Causation

Beriberi—epidemic dropsy—pellagra.

LIST OF COLOURED PLATES.

Plate No.  I.—Pathogenic Bacteria.
Plate No. II.—(a) Tubercle bacillus in sputum.
          (b) Lepra bacillus in section of skin.
Plate No. III.—Leishman-Donovan bodies.
Plate No. IV.—Dermal leishmaniasis.
Plate No. V.—Dermal leishmaniasis.
Plate No. VI.—Malarial parasites.
Plate No. VII.—Capillary angioma of the face
Plate No. VIII.—Amoebic dysentery.
