THE SAVAGE'S DREAD OF INCEST

And now, finally, we must consider that peculiarity of the totemic system which attracts the interest of the psychoanalyst. Almost everywhere where the totem prevails, there also exists the law that the members of the same totem are not allowed to enter into sexual relations with each other; that is, that they cannot marry each other. This represents the exogamy which is associated with the totem.

This sternly maintained prohibition is very remarkable. There is nothing to account for it in anything that we have hitherto learned from the conception of the totem or from any of its attributes; that is, we do not understand how it happened to enter the system of totemism. We are therefore not astonished if some investigators simply assume that at first exogamy—both as to its origin and to its meaning—had nothing to do with totemism, but that it was added to it at some time without any deeper association, when marriage restrictions proved necessary. However that may be, the association of totemism and exogamy exists, and proves to be very strong.

Let us elucidate the meaning of this prohibition through further discussion.

(a) The violation of the prohibition is not left to what is, so to speak, an automatic punishment, as is the case with other violations of the pro-

for having recognized the significance of totemism for the ancient history of man belongs to the Scotchman, J. Ferguson MacLennan (Fortnightly Review, 1869-70). Exterior to Australia, totemic institutions were found and are still observed among North American Indians, as well as among the races of the Polynesian Islands group, in East India, and in a large part of Africa. Many traces and survivals otherwise hard to interpret lead to the conclusion that totemism also once existed among the aboriginal Aryan and Semitic races of Europe, so that many investigators are inclined to recognize in totemism a necessary phase of human development through which every race has passed.

How then did prehistoric man come to acquire a totem; that is, how did he come to make his descent from this or that animal foundation of his social duties and, as we shall hear, of his sexual restrictions as well? Many different theories have been advanced to explain this, a review of which the reader may find in Wundt's Voelkerpsychologie (Vol. II: Mythus und Religion).

I promise soon to make the problem of totemism a subject of special study in which an effort will be made to solve it by applying the psychoanalytic method. (Cf. The fourth chapter of this work.)

Not only is the theory of totemism controversial, but the very facts concerning it are hardly to be expressed in such general statements as were attempted above. There is hardly an assertion to which one would not have to add exceptions and contradictions. But it must not be forgotten that even the most primitive and conservative races are, in a certain sense, old, and have a long period behind them during which whatsoever was aboriginal with them has undergone much development and distortion. Thus among those races who still evince it, we find totemism today in the most manifold states of decay and disintegration; we observe that fragments of it have passed over to other social and religious institutions; or it may exist in fixed forms but far removed from its original nature. The difficulty then consists in the fact that it is not altogether easy to decide what in the actual conditions is to be taken as a faithful copy of the significant past and what is to be considered as a secondary distortion of it.
hitions of the totem (e.g., not to kill the totem animal), but is most energetically avenged by the whole tribe as if it were a question of warding off a danger that threatens the community as a whole or a guilt that weighs upon all. A few sentences from Frazer’s book \(^1\) will show how seriously such trespasses are treated by these savages who, according to our standard, are otherwise very immoral.

“In Australia the regular penalty for sexual intercourse with a person of a forbidden clan is death. It matters not whether the woman is of the same local group or has been captured in war from another tribe; a man of the wrong clan who uses her as his wife is hunted down and killed by his clansmen, and so is the woman; though in some cases, if they succeed in eluding capture for a certain time, the offense may be condoned. In the Ta-Ta-thi tribe, New South Wales, in the rare cases which occur, the man is killed, but the woman is only beaten or speared, or both, till she is nearly dead; the reason given for not actually killing her being that she was probably coerced. Even in casual amours the clan prohibitions are strictly observed; any violations of these prohibitions ‘are regarded with the utmost abhorrence and are punished by death’ (Howitt).”

(b) As the same severe punishment is also meted out for temporary love affairs which have not resulted in childbirth, the assumption of other motives, perhaps of a practical nature, becomes improbable.

(c) As the totem is hereditary and is not changed by marriage, the results of the prohibition, for instance in the case of maternal heredity, are easily perceived. If, for example, the man belongs to a clan with the totem of the Kangaroo and marries a woman of the Emu totem, the children, both boys and girls, are all Emu. According to the totem law incestuous relations with his mother and his sister, who are Emu like himself, are therefore made impossible for a son of this marriage.\(^2\)

(d) But we need only a reminder to realize that the exogamy connected with the totem accomplishes more; that is, aims at more than the prevention of incest with the mother or the sisters. It also makes it impossible for the man to have sexual union with all the women of his own group, with a number of females, therefore, who are not consanguineously related to him, by treating all these women like blood relations. The psychological justification for this extraordinary restriction, which far exceeds anything comparable to it among civilized races, is not, at first, evident. All

---

1 Frazer, *I.C.* p. 54.
2 But the father, who is a Kangaroo, is free—at least under this prohibition—to commit incest with his daughters, who are Emu. In the case of paternal inheritance of the totem the father would be Kangaroo as well as the children; then incest with the daughters would be forbidden to the father and incest with the mother would be left open to the son. These consequences of the totem prohibition seem to indicate that the maternal inheritance is older than the paternal one, for there are grounds for assuming that the totem prohibitions are directed first of all against the incestuous desires of the son.
we seem to understand is that the rôle of the totem (the animal) as ancestor is taken very seriously. Everybody descended from the same totem is consanguineous; that is, of one family; and in this family the most distant grades of relationship are recognized as an absolute obstacle to sexual union.

Thus, these savages reveal to us an unusually high grade of incest dread or incest sensitiveness, combined with the peculiarity, which we do not very well understand, of substituting the totem relationship for the real blood relationship. But we must not exaggerate this contradiction too much, and let us bear in mind that the totem prohibitions include real incest as a special case.

In what manner the substitution of the totem group for the actual family has come about remains a riddle, the solution of which is perhaps bound up with the explanation of the totem itself. Of course it must be remembered that with a certain freedom of sexual intercourse, extending beyond the limitations of matrimony, the blood relationship, and with it also the prevention of incest, becomes so uncertain that we cannot dispense with some other basis for the prohibition. It is, therefore, not superfluous to note that the customs of Australians recognize social conditions and festive occasions at which the exclusive conjugal right of a man to a woman is violated.

The linguistic customs of these tribes, as well as of most totem races, reveal a peculiarity which undoubtedly is pertinent in this connection. For the designations of relationship of which they make use do not take into consideration the relationship between two individuals, but between an individual and his group; they belong, according to the expression of L. H. Morgan, to the "classifying" system. That means that a man not only calls his begetter "father," but also every other man who, according to the tribal regulations, might have married his mother and thus, become his father; he calls "mother" not only the woman who bore him, but also every other woman who might have become his mother without violation of the tribal laws; he calls "brothers" and "sisters" not only the children of his real parents, but also the children of all the persons named who stand in the parental group relation with him, and so on. The kinship names which two Australians give each other do not, therefore, necessarily point to a blood relationship between them, as they would have to according to the custom of our language; they signify much more the social than the physical relations. An approach to this classifying system is perhaps to be found in our nursery, when the child is induced to greet every male and female friend of the parents as "uncle" and "aunt," or it may be found in a transferred sense when we speak of "Brothers in Apollo," or "Sisters in Christ."

The explanation of this linguistic custom, which seems so strange to us,
is simple if looked upon as a remnant and indication of those marriage institutions which the Rev. L. Fison has called "group marriage," characterized by a number of men exercising conjugal rights over a number of women. The children of this group marriage would then rightly look upon each other as brothers and sisters although not born of the same mother, and would take all the men of the group for their fathers.

Although a number of authors, as, for instance, B. Westermarck in his *History of Human Marriage*, oppose the conclusions which others have drawn from the existence of group-relationship names, the best authorities on the Australian savages are agreed that the classificatory relationship names must be considered as survivals from the period of group marriages. And, according to Spencer and Gillen, a certain form of group marriage can be established as still existing today among the tribes of the Urabunna and the Dieri. Group marriage therefore preceded individual marriage among these races, and did not disappear without leaving distinct traces in language and custom.

But if we replace individual marriage, we can then grasp the apparent excess of cases of incest shunning which we have met among these same races. The totem exogamy, or prohibition of sexual intercourse between members of the same clan, seemed the most appropriate means for the prevention of group incest; and this totem exogamy then became fixed and long survived its original motivation.

Although we believe we understand the motives of the marriage restrictions among the Australian savages, we have still to learn that the actual conditions reveal a still more bewildering complication. For there are only a few tribes in Australia which show no other prohibition besides the totem barrier. Most of them are so organized that they fall into two divisions which have been called marriage classes, or phratries. Each of these marriage groups is exogamous and includes a majority of totem groups. Usually each marriage group is again divided into two subclasses (subphratries), and the whole tribe is therefore divided into four classes; the subclasses thus standing between the phratries and the totem groups.

The typical and very often intricate scheme of organization of an Australian tribe is shown in the diagram opposite:

The twelve totem groups are brought under four subclasses and two main classes. All the divisions are exogamous. The subclass forms an exogamous unit with e, and the subclass d with f. The success or the tendency of these arrangements is quite obvious; they serve as a further restriction on the marriage choice and on sexual freedom. If there were only these twelve totem groups—assuming the same number of people in each group—every member of a group would have $\frac{1}{12}$ of all the women

---

1 *The Native Tribes of Central Australia* (London, 1899).
2 The number of totems is arbitrarily chosen.
of the tribe to choose from. The existence of the two phratries reduces this number to $\frac{3}{12}$ or $\frac{1}{2}$; a man of the totem a can only marry a woman from groups 1 to 6. With the introduction of the two subclasses the selection sinks to $\frac{3}{12}$ or $\frac{1}{4}$; a man of the totem a must limit his marriage choice to a woman of the totems 4, 5, 6.

The historical relations of the marriage classes—of which there are found as many as eight in some tribes—are quite unexplained. We only see that these arrangements seek to attain the same object as the totem exogamy, and even strive for more. But whereas the totem exogamy makes the impression of a sacred statute which sprang into existence, no one knows how, and is therefore a custom, the complicated institutions of the marriage classes, with their subdivisions and the conditions attached to them, seem to spring from legislation with a definite aim in view. They have perhaps taken up afresh the task of incest prohibition because the influence of the totem was on the wane. And while the totem system is, as we know, the basis of all other social obligations and moral restrictions of the tribe, the importance of the phratries generally ceases when the regulation of the marriage choice at which they aimed has been accomplished.

In the further development of the classification of the marriage system there seems to be a tendency to go beyond the prevention of natural and group incest, and to prohibit marriage between more distant group relations, in a manner similar to the Catholic church, which extended the marriage prohibitions always in force for brothers and sisters, to cousins, and invented for them the grades of spiritual kinship.\(^1\)

It would hardly serve our purpose to go into the extraordinarily intricate and unsettled discussion concerning the origin and significance of the marriage classes, or to go more deeply into their relation to totemism. It is sufficient for our purposes to point out the great care expended by

---

\(^1\) Article Totemism in Encyclopedia Britannica, eleventh edition, 1911 (A. Lang).
the Australians as well as by other savage people to prevent incest. We must say that these savages are even more sensitive to incest than we, perhaps because they are more subject to temptations than we are, and hence, require more extensive protection against it.

But the incest dread of these races does not content itself with the creation of the institutions described, which, in the main, seem to be directed against group incest. We must add a series of "customs" which watch over the individual behaviour to near relatives in our sense, which are maintained with almost religious severity and of whose object there can hardly be any doubt. These customs or custom prohibitions may be called "avoidances." They spread far beyond the Australian totem races. But here again I must ask the reader to be content with a fragmentary excerpt from the abundant material.

Such restrictive prohibitions are directed in Melanesia against the relations of boys with their mothers and sisters. Thus, for instance, on Leper Island, one of the New Hebrides, the boy leaves his maternal home at a fixed age and moves to the "clubhouse," where he regularly sleeps and takes his meals. He may still visit his home to ask for food, but if his sister is at home he must go away before he has eaten; if no sister is about, he may sit down to eat near the door. If brother and sister meet by chance in the open, she must run away or turn aside and conceal herself. If the boy recognizes certain footprints in the sand as his sister’s, he is not to follow them, nor is she to follow his. He will not even mention her name and will guard against using any current word if it forms part of her name. This avoidance, which begins with the ceremony of puberty, is strictly observed for life. The reserve between mother and son increases with age and generally is more obligatory on the mother’s side. If she brings him something to eat she does not give it to him herself but puts it down before him, nor does she address him in the familiar manner of mother and son, but uses the formal address. Similar customs obtain in New Caledonia. If brother and sister meet, she flees into the bush and he passes by without turning his head toward her.

On the Gazelle Peninsula in New Britain a sister, beginning with her marriage, may no longer speak with her brother, nor does she utter his name but designates him by means of a circumlocution.

In New Mecklenburg some cousins are subject to such restrictions, which also apply to brothers and sisters. They may neither approach each

---

1 Storfer has recently drawn special attention to this point in his monograph: *Parricide as a Special Case. Papers on Applied Psychic Investigation*, No. 12 (Vienna, 1911).
other, shake hands, nor give each other presents, though they may talk
to each other at a distance of several paces. The penalty for incest with
a sister is death through hanging.\footnote{Frazer, \textit{i.e.}, II, p. 131, referring to P. G. Peckel in \textit{Anthropos}, 1908.}

These rules of avoidance are especially severe in the Fiji Islands where
they concern not only consanguineous sisters but group sisters as well.

To hear that these savages hold sacred orgies in which persons of just
these forbidden degrees of kinship seek sexual union would seem still more
peculiar to us, if we did not prefer to make use of this contradiction to
explain the prohibition instead of being astonished at it.\footnote{Frazer, \textit{i.e.}, II, p. 147, referring to the Rev. L. Fison.}

Among the Battas of Sumatra these laws of avoidance affect all near
relationships. For instance, it would be most offensive for a Battan to
accompany his own sister to an evening party. A brother will feel most
uncomfortable in the company of his sister even when other persons are
also present. If either comes into the house, the other prefers to leave.
Nor will a father remain alone in the house with his daughter any more
than the mother with her son. The Dutch missionary who reported these
customs added that unfortunately he had to consider them well founded.
It is assumed without question by these races that a man and a woman left
alone together will indulge in the most extreme intimacy, and as they
expect all kinds of punishments and evil consequences from consanguin-
eous intercourse they do quite right to avoid all temptations by means
of such prohibitions.\footnote{Frazer, \textit{i.e.}, II, p. 189.}

Among the Barongos in Delagoa Bay, in Africa, the most rigorous
precautions are directed, curiously enough, against the sister-in-law, the
wife of the brother of one’s own wife. If a man meets this person who is
so dangerous to him, he carefully avoids her. He does not dare to eat out
of the same dish with her; he speaks only timidly to her, does not dare
to enter her hut, and greets her only with a trembling voice.\footnote{Frazer, \textit{i.e.}, II, p. 388, referring to Junod.}

Among the Akamba (or Wakamba) in British East Africa, a law of
avoidance is in force which one would have expected to encounter more
frequently. A girl must carefully avoid her own father between the time
of her puberty and her marriage. She hides herself if she meets him on
the street and never attempts to sit down next to him, behaving in this
way right up to her engagement. But after her marriage no further ob-
stacle is put in the way of her social intercourse with her father.\footnote{Frazer, \textit{i.e.}, II, p. 424.}

The most widespread and strictest avoidance, which is perhaps the
most interesting one for civilized races is that which restricts the social
relations between a man and his mother-in-law. It is quite general in
Australia, but it is also in force among the Melanesian, Polynesian and
Negro races of Africa as far as the traces of totemism and group relationship reach, and probably further still. Among some of these races similar prohibitions exist against the harmless social intercourse of a wife with her father-in-law, but these are by far not so constant or so serious. In a few cases both parents-in-law become objects of avoidance.

As we are less interested in the ethnographic dissemination than in the substance and the purpose of the mother-in-law avoidance, I will here also limit myself to a few examples.

On the Banks Islands these prohibitions are very severe and painfully exact. A man will avoid the proximity of his mother-in-law as she avoids his. If they meet by chance on a path, the woman steps aside and turns her back until he is passed, or he does the same.

In Vanna Lava (Port Patterson) a man will not even walk behind his mother-in-law along the beach until the rising tide has washed away the trace of her footsteps. But they may talk to each other at a certain distance. It is quite out of the question that he should ever pronounce the name of his mother-in-law, or she his.1

On the Solomon Islands, beginning with his marriage, a man must neither see nor speak with his mother-in-law. If he meets her he acts as if he did not know her and runs away as fast as he can in order to hide himself.2

Among the Zulu Kaffirs custom demands that a man should be ashamed of his mother-in-law and that he should do everything to avoid her company. He does not enter a hut in which she is and when they meet, he or she goes aside, she perhaps hiding behind a bush while he holds his shield before his face. If they cannot avoid each other and the woman has nothing with which to cover herself, she at least binds a bunch of grass around her head in order to satisfy the ceremonial requirements. Communication between them must either be made through a third person or else they may shout at each other at a considerable distance if they have some barrier between them as, for instance, the enclosure of a kraal. Neither may utter the other's name.3

Among the Basogas, a Negro tribe living in the region of the Nile sources, a man may talk to his mother-in-law only if she is in another room of the house and is not visible to him. Moreover, this race abominiates incest to such an extent as not to let it go unpunished even among domestic animals.4

Whereas all observers have interpreted the purpose and meaning of the avoidances between near relatives as protective measures against incest,

1 Frazer, l.c., II, p. 76.
2 Frazer, l.c., II, p. 113, referring to C. Ribbie: *Two Years among the Cannibals of the Solomon Islands*, 1905.
3 Frazer, l.c., II, p. 385.
4 Frazer, l.c., II, p. 461.
different interpretations have been given for those prohibitions which concern the relationship with the mother-in-law. It was quite incomprehensible why all these races should manifest such great fear of temptation on the part of the man for an elderly woman, old enough to be his mother.¹

The same objection was also raised against the conception of Fison who called attention to the fact that certain marriage class systems show a gap in that they make marriage between a man and his mother-in-law theoretically not impossible and that a special guarantee was therefore necessary to guard against this possibility.

Sir J. Lubbock, in his book The Origin of Civilization, traces back the behaviour of the mother-in-law toward the son-in-law to the former “marriage by capture.” “As long as the capture of women actually took place, the indignation of the parents was probably serious enough. When nothing but symbols of this form of marriage survived, the indignation of the parents was also symbolized and this custom continued after its origin had been forgotten.” Crawley has found it easy to show how little this tentative explanation agrees with the details of actual observation.

E. B. Tylor thinks that the treatment of the son-in-law on the part of the mother-in-law is nothing more than a form of “cutting” on the part of the woman’s family. The man counts as a stranger, and this continues until the first child is born. But even if no account is taken of cases in which this last condition does not remove the prohibition, this explanation is subject to the objection that it does not throw any light on the custom dealing with the relation between mother-in-law and son-in-law, thus overlooking the sexual factor, and that it does not take into account the almost sacred loathing which finds expression in the laws of avoidance.²

A Zulu woman who was asked about the basis for this prohibition showed great delicacy of feeling in her answer: “It is not right that he should see the breasts which nursed his wife.” ³

It is known that also among civilized races the relation of son-in-law and mother-in-law belongs to one of the most difficult sides of family organization. Although laws of avoidance no longer exist in the society of the white races of Europe and America, much quarrelling and displeasure would often be avoided if they did exist and did not have to be re-established by individuals. Many a European will see an act of high wisdom in the laws of avoidance which savage races have established to preclude any understanding between two persons who have become so closely related. There is hardly any doubt that there is something in the psychological situation of mother-in-law and son-in-law which furthers hostilities

² Crawley, i.e., p. 407.
³ Crawley, i.e., p. 401, referring to Leslie: Among the Zulus and Amatongas, 1875.
between them and renders living together difficult. The fact that the wit-
ticisms of civilized races show such a preference for this very mother-in-
law theme seems to me to point to the fact that the emotional relations
between mother-in-law and son-in-law are controlled by components
which stand in sharp contrast to each other. I mean that the relation is
really "ambivalent"; that is, it is composed of conflicting feelings of
tenderness and hostility.

A certain part of these feelings is evident. The mother-in-law is unwill-
ing to give up the possession of her daughter; she distrusts the stranger to
whom her daughter has been delivered, and shows a tendency to maintain
the dominating position, to which she became accustomed at home. On
the part of the man, there is the determination not to subject himself any
longer to any foreign will, his jealousy of all persons who preceded him in
the possession of his wife's tenderness, and, last but not least, his aversion
to being disturbed in his illusion of sexual over-valuation. As a rule such
a disturbance emanates for the most part from his mother-in-law who
reminds him of her daughter through so many common traits but who
lacks all the charm of youth, such as beauty and that psychic spontaneity
which makes his wife precious to him.

The knowledge of hidden psychic feelings which psychoanalytic in-
vestigation of individuals has given us, makes it possible to add other
motives to the above. Where the psycho-sexual needs of the woman are
to be satisfied in marriage and family life, there is always the danger of
dissatisfaction through the premature termination of the conjugal rela-
tion, and the monotony in the wife's emotional life. The ageing mother
protects herself against this by living through the lives of her children,
by identifying herself with them and making their emotional experiences
her own. Parents are said to remain young with their children, and this is,
in fact, one of the most valuable psychic benefits which parents derive
from their children. Childlessness thus eliminates one of the best means
to endure the necessary resignation imposed upon the individual through
marriage. This emotional identification with the daughter may easily go
so far with the mother that she also falls in love with the man her daughter
loves, which leads, in extreme cases, to severe forms of neurotic ailments
on account of the violent psychic resistance against this emotional pre-
disposition. At all events the tendency to such infatuation is very frequent
with the mother-in-law, and either this infatuation itself or the tendency
opposed to it joins the conflict of contending forces in the psyche of the
mother-in-law. Very often it is just this harsh and sadistic component of
the love emotion which is turned against the son-in-law in order better to
suppress the forbidden tender feelings.

The relation of the husband to his mother-in-law is complicated through
similar feelings which, however, spring from other sources. The path of
object selection has normally led him to his love object through the image of his mother and perhaps his sister; in consequence of the incest barriers his preference for these two beloved persons of his childhood has been deflected and he is then able to find their image in strange objects. He now sees the mother-in-law taking the place of his own mother and of his sister's mother, and there develops a tendency to return to the primitive selection, against which everything in him resists. His incest dread demands that he should not be reminded of the genealogy of his love selection; the actuality of his mother-in-law, whom he had not known all his life like his mother so that her picture can be preserved unchanged in his unconscious, facilitates this rejection. An added mixture of irritability and animosity in his feelings leads us to suspect that the mother-in-law actually represents an incest temptation for the son-in-law, just as it not infrequently happens that a man falls in love with his subsequent mother-in-law before his inclination is transferred to her daughter.

I see no objection to the assumption that it is just this incestuous factor of the relationship which motivates the avoidance between son- and mother-in-law among savages. Among the explanations for the "avoidances" which these primitive races observe so strictly, we would therefore give preference to the opinion originally expressed by Fison, who sees nothing in these regulations but a protection against possible incest. This would also hold good for all the other avoidances between those related by blood and by marriage. There is only one difference, namely, in the first case the incest is direct, so that the purpose of the prevention might be conscious; in the other case, which includes the mother-in-law relation, the incest would be a phantasy temptation brought about by unconscious intermediary links.

We have had little opportunity in this exposition to show that the facts of folk-psychology can be seen in a new light through the application of the psychoanalytic point of view, for the incest dread of savages has long been known as such, and is in need of no further interpretation. What we can add to the further appreciation of incest dread is the statement that it is a subtle infantile trait and is in striking agreement with the psychic life of the neurotic. Psychoanalysis has taught us that the first object selection of the boy is of an incestuous nature and that it is directed to the forbidden objects, the mother and the sister; psychoanalysis has taught us also the methods through which the maturing individual frees himself from these incestuous attractions. The neurotic, however, regularly presents to us a piece of psychic infantilism; he has either not been able to free himself from the childish conditions of psycho-sexuality, or else he has returned to them (inhibited development and regression). Hence, the incestuous fixations of the libido still play or again are playing the main rôle in his unconscious psychic life. We have gone so far
as to declare that the relation to the parents instigated by incestuous longings is the central complex of the neurosis. This discovery of the significance of incest for the neurosis naturally meets with the most general incredulity on the part of the grown-up, normal man; a similar rejection will also meet the researches of Otto Rank, which show in even larger scope to what extent the incest theme stands in the centre of poetical interest and how it forms the material of poetry in countless variations and distortions. We are forced to believe that such a rejection is above all the product of man's deep aversion to his former incest wishes which have since succumbed to repression. It is, therefore, of importance to us to be able to show that man's incest wishes, which later are destined to become unconscious, are still felt to be dangerous by savage races who consider them worthy of the most severe defensive measures.
II

TABOO AND THE AMBIVALENCE OF EMOTIONS

I

Taboo is a Polynesian word, the translation of which provides difficulties for us because we no longer possess the idea which it connotes. It was still current with the ancient Romans: their word “sacer” was the same as the taboo of the Polynesians. The ἀγος of the Greeks and the Kodaush of the Hebrews must also have signified the same thing which the Polynesians express through their word taboo and what many races in America, Africa (Madagascar), North and Central Asia express through analogous designations.

For us the meaning of taboo branches off into two opposite directions. On the one hand it means to us, sacred, consecrated: but on the other hand it means, uncanny, dangerous, forbidden, and unclean. The opposite for taboo is designated in Polynesian by the word noa and signifies something ordinary and generally accessible. Thus something like the concept of reserve inheres in taboo; taboo expresses itself essentially in prohibitions and restrictions. Our combination of “holy dred” would often express the meaning of taboo.

The taboo restrictions are different from religious or moral prohibitions. They are not traced to a commandment of a god, but really they themselves impose their own prohibitions; they are differentiated from moral prohibitions by failing to be included in a system which declares abstinences in general to be necessary and gives reasons for this necessity. The taboo prohibitions lack all justification and are of unknown origin. Though incomprehensible to us they are taken as a matter of course by those who are under their dominance.

Wundt \(^1\) calls taboo the oldest unwritten code of law of humanity. It is generally assumed that taboo is older than the gods and goes back to the pre-religious age.

\(^{1}\) Voelkerpsychologie, II. Band: Mythus und Religion, 1906, II, p. 308.
TOTEM AND TABOOS

As we are in need of an impartial presentation of the subject of taboo before subjecting it to psychoanalytic consideration I shall now cite an excerpt from the article Taboo in the Encyclopaedia Britannica written by the anthropologist Northcote W. Thomas:

"Properly speaking, taboo includes only (a) the sacred (or unclean) character of persons or things, (b) the kind of prohibition which results from this character, and (c) the sanctity (or uncleanness) which results from a violation of the prohibition. The converse of taboo in Polynesia is 'noa' and allied forms which mean 'general' or 'common.' . . ."

"Various classes of taboo in the wider sense may be distinguished: 1. natural or direct, the result of 'mana' mysterious (power) inherent in a person or thing; 2. communicated or indirect, equally the result of 'mana' but (a) acquired or (b) imposed by a priest, chief or other person; 3. intermediate, where both factors are present, as in the appropriation of a wife to her husband. The term taboo is also applied to ritual prohibitions of a different nature; but its use in these senses is better avoided. It might be argued that the term should be extended to embrace cases in which the sanction of the prohibition is the creation of a god or spirit, i.e., to religious interdictions as distinguished from magical, but there is neither automatic action nor contagion in such a case, and a better term for it is religious interdiction.

"The objects of the taboo are many: 1. direct taboos aim at (a) protection of important persons—chiefs, priests, etc.—and things against harm; (b) safeguarding of the weak—women, children and common people generally—from the powerful mana (magical influence) of chiefs and priests; (c) providing against the dangers incurred by handling or coming in contact with corpses, by eating certain food, etc.; (d) guarding the chief acts of life—births, initiation, marriage and sexual functions—against interference; (e) securing human beings against the wrath or power of gods and spirits; 2 (f) securing unborn infants and young children, who stand in a specially sympathetic relation with their parents, from the consequence of certain actions, and more especially from the communication of qualities supposed to be derived from certain foods. 2. Taboos are imposed in order to secure against thieves the property of an individual, his fields, tools, etc."

Other parts of the article may be summarized as follows. Originally the punishment for the violation of a taboo was probably left to an inner, automatic arrangement. The violated taboo avenged itself. Wherever the taboo was related to ideas of gods and demons an automatic punishment was expected from the power of the godhead. In other cases, probably as a result of a further development of the idea, society took over the punish-

1. Eleventh Edition; this article also gives the most important references.

2. This application of the taboo can be omitted as not originally belonging in this connection.
ment of the offender, whose action has endangered his companions. Thus
man's first systems of punishment are also connected with taboo.

"The violation of a taboo makes the offender himself taboo." The
author goes on to say that certain dangers resulting from the violation of
a taboo may be exercised through acts of penance and ceremonies of puri-

A peculiar power inherent in persons and ghosts, which can be trans-
mitted from them to inanimate objects is regarded as a source of the ta-
boo. This part of the article reads as follows: "Persons or things which
are regarded as taboo may be compared to objects charged with elec-
tricity; they are the seat of tremendous power which is transmissible by
contact, and may be liberated with destructive effect if the organisms
which provoke its discharge are too weak to resist it; the result of a vo-
lution of a taboo depends partly on the strength of the magical influence
inherent in the taboo object or person, partly on the strength of the op-
posing mana of the violator of the taboo. Thus, kings and chiefs are pos-
sessed of great power, and it is death for their subjects to address them
directly; but a minister or other person of greater mana than common, can
approach them unharmed, and can in turn be approached by their in-
fieriors without risk. . . . So, too, indirect taboos depend for their
strength on the mana of him who opposes them; if it is a chief or a priest,
they are more powerful than those imposed by a common person."

The fact that a taboo is transmissible has surely given rise to the effort
of removing it through expiatory ceremonies.

The author states that there are permanent and temporary taboos. The
former comprise priests and chiefs as well as the dead and everything that
has belonged to them. Temporary taboos attach themselves to certain
conditions such as menstruation and child-bed, the status of the warrior
before and after the expedition, the activities of fishing and of the chase,
and similar activities. A general taboo may also be imposed upon a large
district like an ecclesiastical interdict, and may then last for years.

If I judge my readers' impressions correctly, I dare say that after hear-
ing all that was said about taboo they are far from knowing what to un-
derstand by it and where to store it in their minds. This is surely due to
the insufficient information I have given and to the omission of all dis-
cussions concerning the relation of taboo to superstition, to belief in the
soul, and to religion. On the other hand I fear that a more detailed de-
scription of what is known about taboo would be still more confusing; I
can therefore assure the reader that the state of affairs is really far from
clear. We may say, however, that we deal with a series of restrictions
which these primitive races impose upon themselves; this and that is for-
bidden without any apparent reason; nor does it occur to them to ques-
tion this matter, for they subject themselves to these restrictions as a
matter of course and are convinced that any transgression will be punished automatically in the most severe manner. There are reliable reports that innocent transgressions of such prohibitions have actually been punished automatically. For instance, the innocent offender who had eaten from a forbidden animal became deeply depressed, expected his death and then actually died. The prohibitions mostly concern matters which are capable of enjoyment such as freedom of movement and unrestrained intercourse; in some cases they appear very ingenious, evidently representing obstinences and renunciations; in other cases their content is quite incomprehensible, they seem to concern themselves with trifles and give the impression of ceremonial. Something like a theory seems to underlie all these prohibitions, it seems as if these prohibitions are necessary because some persons and objects possess a dangerous power which is transmitted by contact with the object so charged, almost like a contagion. The quantity of this dangerous property is also taken into consideration. Some persons or things have more of it than others and the danger is precisely in accordance with the charge. The most peculiar part of it is that any one who has violated such a prohibition assumes the nature of the forbidden object as if he had absorbed the whole dangerous charge. This power is inherent in all persons who are more or less prominent, such as kings, priests and the newly born, in all exceptional physical states such as menstruation, puberty and birth, in everything sinister like illness and death and in everything connected with these conditions by virtue of contagion or dissemination.

However, the term “taboo” includes all persons, localities, objects and temporary conditions which are carriers or sources of this mysterious attribute. The prohibition derived from this attribute is also designated as taboo, and lastly taboo, in the literal sense, includes everything that is sacred, above the ordinary, and at the same time dangerous, unclean and mysterious.

Both this word and the system corresponding to it express a fragment of psychic life which really is not comprehensible to us. And indeed it would seem that no understanding of it could be possible without entering into the study of the beliefs in spirits and demons which is so characteristic of these low grades of culture.

Now why should we take any interest at all in the riddle of taboo? Not only, I think, because every psychological problem is well worth the effort of investigation for its own sake, but for other reasons as well. It may be surmised that the taboo of Polynesian savages is after all not so remote from us as we were at first inclined to believe; the moral and customary prohibitions which we ourselves obey may have some essential relation to this primitive taboo the explanation of which may in the end throw light upon the dark origin of our own “categorical imperative.”
TABOO AND THE AMBIVALENCE OF EMOTIONS

We are, therefore, inclined to listen with keen expectations when an investigator like W. Wundt gives his interpretation of taboo, especially as he promises to go back to the very roots of the taboo concepts.¹

Wundt states that the idea of taboo "includes all customs which express dread of particular objects connected with cultic ideas or of actions having reference to them." ²

On another occasion he says: "In accordance with the general sense of the word we understand by taboo every prohibition laid down in customs or manners or in expressly formulated laws, not to touch an object or to take it for one's own use, or to make use of certain proscribed words. . . ." Accordingly there would not be a single race or stage of culture which had escaped the injurious effects of taboo.

Wundt then shows why he finds it more practical to study the nature of taboo in the primitive states of Australian savages rather than in the higher culture of the Polynesian races. In the case of the Australians he divides taboo prohibitions into three classes according as they concern animals, persons or other objects. The animal taboo, which consists essentially of the taboo against killing and eating, forms the nucleus of Totemism.³ The taboo of the second class, which has human beings for its object, is of an essentially different nature. To begin with, it is restricted to conditions which bring about an unusual situation in life for the person tabooed. Thus young men at the feast of initiation, women during menstruation and immediately after delivery, newly born children, the diseased and especially the dead, are all taboo. The constantly used property of any person, such as his clothes, tools and weapons, is permanently taboo for everybody else. In Australia the new name which a youth receives at his initiation into manhood becomes a part of his most personal property, it is taboo and must be kept secret. The taboos of the third class, which apply to trees, plants, houses and localities, are more variable and seem only to follow the rule that anything which for any reason arouses dread or is mysterious, becomes subject to taboo.

Wundt himself has to acknowledge that the changes which taboo undergoes in the richer culture of the Polynesians and in the Malayan Archipelago are not very profound. The greater social differentiation of these races manifests itself in the fact that chiefs, kings and priests exercise an especially effective taboo and are themselves exposed to the strongest taboo compulsion.

But the real sources of taboo lie deeper than in the interests of the privileged classes: "They begin where the most primitive and at the same time the most enduring human impulses have their origin, namely,

¹ Voelkerpsychologie, Religion und Mythus, p. 300.
² loc. cit. p. 237.
³ Cf. Chapter I.
in the fear of the effect of demonic powers.” ¹ "The taboo, which originally was nothing more than the objectified fear of the demonic power thought to be concealed in the tabooed object, forbids the irritation of this power and demands the placation of the demon whenever the taboo has been knowingly or unknowingly violated."

The taboo then gradually became an autonomous power which has detached itself from demonism. It becomes the compulsion of custom and tradition and finally the law. "But the commandment concealed behind taboo prohibitions which differ materially according to place and time, had originally the meaning: Beware of the wrath of the demons."

Wundt therefore teaches that taboo is the expression and evolution of the belief of primitive races in demonic powers, and that later taboo has dissociated itself from this origin and has remained a power simply because it was one by virtue of a kind of a psychic persistence and in this manner it became the root of our customs and laws. As little as one can object to the first part of this statement I feel, however, that I am only voicing the impression of many of my readers if I call Wundt’s explanation disappointing. Wundt’s explanation is far from going back to the sources of taboo concepts or to their deepest roots. For neither fear nor demons can be accepted in psychology as finalities defying any further deduction. It would be different if demons really existed; but we know that, like gods, they are only the product of the psychic powers of man; they have been created from and out of something.

Wundt also expresses a number of important though not altogether clear opinions about the double meaning of taboo. According to him the division between sacred and unclean does not yet exist in the first primitive stages of taboo. For this reason these conceptions entirely lack the significance which they could only acquire later on when they came to be contrasted. The animal, person or place on which there is a taboo is demonic, that is, not sacred, and therefore not yet, in the later sense, unclean. The expression taboo is particularly suitable for this undifferentiated and intermediate meaning of the demonic, in the sense of something which may not be touched, since it emphasizes a characteristic which finally adheres both to what is sacred and to the unclean, namely, the dread of contact. But the fact that this important characteristic is permanently held in common points to the existence of an original agreement here between these two spheres which gave way to a differentiation only as the result of further conditions through which both finally developed into opposites.

The belief associated with the original taboo, according to which a demonic power concealed in the object avenges the touching of it or its forbidden use by bewitching the offender was still an entirely objectified

¹ I. C., p. 307.
fear. This had not yet separated into the two forms which it assumed at a more developed stage, namely, awe and aversion.

How did this separation come about? According to Wundt, this was done through the transference of taboo prohibitions from the sphere of demons to that of theistic conceptions. The antithesis of sacred and unclean coincides with the succession of two mythological stages, the first of which did not entirely disappear when the second was reached but continued in a state of greatly lowered esteem which gradually turned into contempt. It is a general law in mythology that a preceding stage, just because it has been overcome and pushed back by a higher stage, maintains itself next to it in a debased form so that the objects of its veneration become objects of aversion.¹

Wundt's further elucidations refer to the relation of taboo to lustration and sacrifice.

He who approaches the problem of taboo from the field of psychoanalysis, which is concerned with the study of the unconscious part of the individual's psychic life, needs but a moment's reflection to realize that these phenomena are by no means foreign to him. He knows people who have individually created such taboo prohibitions for themselves, which they follow as strictly as savages observe the taboos common to their tribe or society. If he were not accustomed to call these individuals "compulsion neurotics" he would find the term "taboo disease" quite appropriate for their malady. Psychoanalytic investigation has taught him the clinical etiology and the essential part of the psychological mechanism of this compulsion disease, so that he cannot resist applying what he has learnt there to explain corresponding manifestations in folk psychology.

There is one warning to which we shall have to give heed in making this attempt. The similarity between taboo and compulsion disease may be purely superficial, holding good only for the manifestations of both without extending into their deeper characteristics. Nature loves to use identical forms in the most widely different biological connections as, for instance, for coral stems and plants and even for certain crystals or for the formation of certain chemical precipitates. Assuredly would it be both premature and unprofitable to base conclusions relating to inner relationships upon the correspondence of merely mechanical conditions. We shall bear this warning in mind without, however, giving up our intended comparison on account of the possibility of such confusions.

The first and most striking correspondence between the compulsion prohibitions of neurotics and taboo lies in the fact that the origin of ¹I.e., p. 313.
these prohibitions is just as unmotivated and enigmatic. They have appeared at some time or other and must now be retained on account of an unconquerable anxiety. An external threat of punishment is superfluous, because an inner certainty (a conscience) exists that violation will be followed by unbearable disaster. The very most that compulsion patients can tell us is the vague premonition that some person of their environment will suffer harm if they should violate the prohibition. Of what the harm is to consist is not known, and this inadequate information is more likely to be obtained during the later discussions of the expiatory and defensive actions than when the prohibitions themselves are being discussed.

As in the case of taboo, the nucleus of the neurotic prohibition is the act of touching, whence we derive the name “touching phobia” or délire de toucher. The prohibition extends not only to direct contact with the body but also to the figurative use of the phrase as “to come into contact” or “be in touch with some one or something.” Anything that leads the thoughts to what is prohibited and thus calls forth mental contact is just as much prohibited as immediate bodily contact; this same extension is also found in taboo.

Some prohibitions are easily understood from their purpose but others strike us as incomprehensible, foolish and senseless. We designate such commands as “ceremonials” and we find that taboo customs show the same variations.

Obsessive prohibitions possess an extraordinary capacity for displacement; they make use of almost any form of connection to extend from one object to another and then in turn make this new object “impossible,” as one of my patients aptly puts it. This impossibility finally lays an embargo upon the whole world. The compulsion neurotics act as if the “impossible” persons and things were the carriers of a dangerous contagion which is ready to displace itself through contact to all neighbouring things. We have already emphasized the same characteristics of contagion and transference in the description of taboo prohibitions. We also know that any one, who has violated a taboo by touching something which is taboo, becomes taboo himself, and no one may come into contact with him.

I shall put side by side two examples of transference or, to use a better term, displacement, one from the life of the Maori, and the other from my observation of a woman suffering from a compulsion neurosis:

“For a similar reason a Maori chief would not blow on a fire with his mouth; for his sacred breath would communicate its sanctity to the fire, which would pass it on to the meat in the pot, which would pass it on to the man who ate the meat which was in the pot, which stood on the fire, which was breathed on by the chief; so that the eater, infected by
the chief's breath conveyed through these intermediaries, would surely die.'

My patient demanded that a utensil which her husband had purchased and brought home should be removed lest it make the place where she lived impossible. For she had heard that this object was bought in a store which was situated, let us say, in Stag Street. But as the word "stag" was the name of a friend now in a distant city, whom she had known in her youth under her maiden name and whom she now found "impossible," that name was taboo, and the object bought in Vienna was just as taboo as this friend with whom she did not want to come in contact.

Compulsion prohibitions, like taboo prohibitions, entail the most extraordinary renunciations and restrictions of life, but a part of these can be removed by carrying out certain acts which now also must be done because they have acquired a compulsive character (obsessive acts); there is no doubt that these acts are in the nature of penances, expiations, defence reactions, and purifications. The most common of these obsessive acts is washing with water (washing obsession). A part of the taboo prohibitions can also be replaced in this way, that is to say, their violation can be made good through such a "ceremonial," and here too lustration through water is the preferred way.

Let us now summarize the points in which the correspondence between taboo customs and the symptoms of compulsion neurosis are most clearly manifested: 1. In the lack of motivation of the commandments, 2. in their enforcement through an inner need, 3. in their capacity for displacement and in the danger of contagion from what is prohibited, 4. and in the causation of ceremonial actions and commandments which emanate from the forbidden.

However, psychoanalysis has made us familiar with the clinical history as well as the psychic mechanism of compulsion neurosis. Thus, the history of a typical case of touching phobia reads as follows: In the very beginning, during the early period of childhood, the person manifested a strong pleasure in touching himself, the object of which was much more specialized than one would be inclined to suspect. Presently the carrying out of this very pleasurable act of touching was opposed by a prohibition from without. The prohibition was accepted because it was supported by strong inner forces; it proved to be stronger than the impulse which wanted to manifest itself through this act of touching. But due to the primitive psychic constitution of the child this prohibition did not succeed in abolishing the impulse. Its only success lay in repressing the impulse (the pleasure of touching) and banishing it into the un-

2 Both the pleasure and the prohibition referred to touching one's own genitals.
3 The relation to beloved persons who impose the prohibition.
conscious. Both the prohibition and the impulse remained; the impulse because it had only been repressed and not abolished, the prohibition, because if it had ceased, the impulse would have broken through into consciousness and would have been carried out. An unsolved situation, a psychic fixation, had thus been created and now everything else emanated from the continued conflict between prohibition and impulse.

The main characteristic of the psychic constellation which has thus gone under fixation lies in what one might call the ambivalent behaviour of the individual to the object, or rather to an action regarding it. The individual constantly wants to carry out this action (the act of touching), he sees in it the highest pleasure, but he may not carry it out, and he even abominates it. The opposition between these two streams cannot be easily adjusted because—there is no other way to express it—they are so localized in the psychic life that they cannot meet. The prohibition becomes fully conscious, while the surviving pleasure of touching remains unconscious, the person knowing nothing about it. If this psychological factor did not exist the ambivalence could neither maintain itself so long nor lead to such subsequent manifestations.

In the clinical history of the case we have emphasized the appearance of the prohibition in early childhood as the determining factor, but for the further elaboration of the neurosis this rôle is played by the repression which appears at this age. On account of the repression which has taken place, which is connected with forgetting (amnesia), the motivation of the prohibition that has become conscious remains unknown, and all attempts to unravel it intellectually must fail, as the point of attack cannot be found. The prohibition owes its strength—its compulsive character—to its association with its unknown counterpart, the hidden and unabated pleasure, that is to say, to an inner need into which conscious insight is lacking. The transferability and reproductive power of the prohibition reflect a process which harmonizes with the unconscious pleasure and is very much facilitated through the psychological determinants of the unconscious. The pleasure of the impulse constantly undergoes displacement in order to escape the blocking which it encounters and seeks to acquire surrogates for the forbidden in the form of substitutive objects and actions. For the same reason the prohibition also wanders and spreads to the new aims of the proscribed impulse. Every new advance of the repressed libido is answered by the prohibition with a new severity. The mutual inhibition of these two contending forces creates a need for discharge and for lessening the existing tension, in which we may recognize the motivation for the compulsive acts. In the neurosis there are distinctly acts of compromise which on the one hand may be regarded as proofs of remorse and efforts to expiate and

---

1 To use an excellent term coined by Bleuler.
similiar actions; but on the other hand they are at the same time sub-
tutive actions which recompense the impulse for what has been forbid-
den. It is a law of neurotic diseases that these obsessive acts serve the
impulse more and more and come nearer and nearer to the original and
forbidden act.

We may now make the attempt to study taboo as if it were of the
same nature as the compulsive prohibitions of our patients. It must
naturally be clearly understood that many of the taboo prohibitions
which we shall study are already secondary, displaced and distorted, so
that we shall have to be satisfied if we can shed some light upon the
earliest and most important taboo prohibitions. We must also remember
that the differences in the situation of the savage and of the neurotic may
be important enough to exclude complete correspondence and prevent
a point by point transfer from one to the other such as would be possible
if we were dealing with exact copies.

First of all it must be said that it is useless to question savages as
to the real motivation of their prohibitions or as to the genesis of taboo.
According to our assumption they must be incapable of telling us any-
thing about it since this motivation is "unconscious" to them. But fol-
lowing the model of the compulsive prohibition we shall construct the
history of taboo as follows: Taboos are very ancient prohibitions which
at one time were forced upon a generation of primitive people from
without, that is, they probably were forcibly impressed upon them by
an earlier generation. These prohibitions concerned actions for which
there existed a strong desire. The prohibitions maintained themselves
from generation to generation, perhaps only as the result of a tradition
set up by paternal and social authority. But in later generations they
have perhaps already become "organized" as a piece of inherited psychic
property. Whether there are such "innate ideas" or whether these have
brought about the fixation of the taboo by themselves or by co-operating
with education no one could decide in the particular case in question.
The persistence of taboo teaches, however, one thing, namely, that the
original pleasure to do the forbidden still continues among taboo races.
They therefore assume an ambivalent attitude toward their taboo pro-
hibitions; in their unconscious they would like nothing better than to
transgress them but they are also afraid to do it; they are afraid just
because they would like to transgress, and the fear is stronger than the
pleasure. But in every individual of the race the desire for it is uncon-
scious, just as in the neurotic.

The oldest and most important taboo prohibitions are the two basic
laws of totemism: namely, not to kill the totem animal, and to avoid
sexual intercourse with totem companions of the other sex.

It would, therefore, seem that these must have been the oldest and
strongest desires of mankind. We cannot understand this and therefore we cannot use these examples to test our assumptions as long as the meaning and the origin of the totemic system is so wholly unknown to us. But the very wording of these taboos and the fact that they occur together will remind any one who knows the results of the psychoanalytic investigation of individuals, of something quite definite which psychoanalysts call the central point of the infantile wish life and the nucleus of the later neurosis.¹

All other varieties of taboo phenomena which have led to the attempted classifications noted above become unified if we sum them up in the following sentence: The basis of taboo is a forbidden action for which there exists a strong inclination in the unconscious.

We know, without understanding it, that whoever does what is prohibited and violates the taboo, becomes himself taboo. But how can we connect this fact with the other, namely that the taboo adheres not only to persons who have done what is prohibited, but also to persons who are in exceptional circumstances, as well as to these circumstances themselves and to impersonal things? What can this dangerous attribute be which always remains the same under all these different conditions? Only one thing, namely, the propensity to arouse the ambivalence of man and to tempt him to violate the prohibition.

An individual, who has violated a taboo, becomes himself taboo because he has the dangerous property of tempting others to follow his example. He arouses envy; why should he be allowed to do what is prohibited to others? He is therefore really contagious, in so far as every example incites to imitation and, therefore, he himself must be avoided.

But a person may become permanently or temporarily taboo without having violated any taboos, for the simple reason that he is in a condition which has the property of inciting the forbidden desires of others and of awakening the ambivalent conflict in them. Most of the exceptional positions and conditions have this character and possess this dangerous power. The king or chieftain arouses envy of his prerogatives; everybody would perhaps like to be king. The dead, the newly born, and women when they are incapacitated, all act as incitements because of their peculiar helplessness, while the individual who has just reached sexual maturity tempts through the promise of a new pleasure. Therefore, all these persons and all these conditions are taboo, for one must not yield to the temptations which they offer.

Now, too, we understand why the forces inherent in the "mana" of various persons can neutralize one another so that the mana of one individual can partly cancel that of the other. The taboo of a king is too strong for his subject because the social difference between them

¹ See Chapter IV: Totemism, etc.
is too great. But a minister, for example, can become the harmless mediator between them. Translated from the language of taboo into the language of normal psychology this means: the subject who shrinks from the tremendous temptation which contact with the king creates for him can brook the intercourse of an official, whom he does not have to envy so much and whose position perhaps seems attainable to him. The minister, on his part, can moderate his envy of the king by taking into consideration the power that has been granted to him. Thus, smaller differences in the magic power that lead to temptation are less to be feared than exceptionally big differences.

It is equally clear how the violation of certain taboo prohibitions becomes a social danger which must be punished or expiated by all the members of society lest it harm them all. This danger really exists if we substitute the known impulses for the unconscious desires. It consists in the possibility of imitation, as a result of which society would soon be dissolved. If the others did not punish the violation they would pelforce become aware that they want to imitate the evil doer.

Though the secret meaning of a taboo prohibition cannot possibly be of so special a nature as in the case of a neurosis, we must not be astonished to find that touching plays a similar rôle in taboo prohibition as in the délire de toucher. To touch is the beginning of every act of possession, of every attempt to make use of a person or thing.

We have interpreted the power of contagion which inheres in the taboo as the property of leading into temptation, and of inciting to imitation. This does not seem to be in accord with the fact that the contagiousness of the taboo is above all manifested in the transference to objects which thus themselves become carriers of the taboo.

This transferability of the taboo reflects what is found in the neurosis, namely, the constant tendency of the unconscious impulse to become displaced through associative channels upon new objects. Our attention is thus drawn to the fact that the dangerous magic power of the mana corresponds to two real faculties, the capacity of reminding man of his forbidden wishes, and the apparently more important one of tempting him to violate the prohibition in the service of these wishes. Both functions reunite into one, however, if we assume it to be in accord with a primitive psychic life that with the awakening of a memory of a forbidden action there should also be combined the awakening of the tendency to carry out the action. Memory and temptation then again coincide. We must also admit that if the example of a person who has violated a prohibition leads another to the same action, the disobedience of the prohibition has been transmitted like a contagion, just as the taboo is transferred from a person to an object, and from this to another.

If the violation of a taboo can be condoned through expiation or pen-
ance, which means, of course, a renunciation of a possession or a liberty, we have the proof that the observance of a taboo regulation was itself a renunciation of something really wished for. The omission of one renunciation is cancelled through a renunciation at some other point. This would lead us to conclude that, as far as taboo ceremonials are concerned, penance is more primitive than purification.

Let us now summarize what understanding we have gained of taboo through its comparison with the compulsive prohibition of the neurotic. Taboo is a very primitive prohibition imposed from without (by an authority) and directed against the strongest desires of man. The desire to violate it continues in the unconscious; persons who obey the taboo have an ambivalent feeling toward what is affected by the taboo. The magic power attributed to taboo goes back to its ability to lead man into temptation; it behaves like a contagion, because the example is contagious, and because the prohibited desire becomes displaced in the unconscious upon something else. The expiation for the violation of a taboo through a renunciation proves that a renunciation is at the basis of the observance of the taboo.

We may ask what we have gained from the comparison of taboo with compulsion neurosis and what value can be claimed for the interpretation we have given on the basis of this comparison? Our interpretation is evidently of no value unless it affords an advantage not to be had in any other way and unless it affords a better understanding of taboo than was otherwise possible. We might claim that we have already given proof of its usefulness in what has been said above; but we shall have to try to strengthen our proof by continuing the explanation of taboo prohibitions and customs in detail.

But we can avail ourselves of another method. We can shape our investigation so as to ascertain whether a part of the assumptions which we have transferred from the neurosis to the taboo, or the conclusions at which we have thereby arrived can be demonstrated directly in the phenomena of taboo. We must decide, however, what we want to look for. The assertion concerning the genesis of taboo, namely, that it was derived from a primitive prohibition which was once imposed from without, cannot, of course, be proved. We shall therefore seek to confirm those psychological conditions for taboo with which we have become acquainted in the case of compulsion neurosis. How did we gain our knowledge of these psychological factors in the case of neurosis? Through the analytical study of the symptoms, especially the compulsive actions, the defense reactions and the obsessive commands. These mechanisms gave every indication of having been derived from ambivalent
impulses or tendencies, they either represented simultaneously the wish and counter-wish or they served preponderantly one of the two contrary tendencies. If we should now succeed in showing that ambivalence, \textit{i.e.}, the sway of contrary tendencies, exists also in the case of taboo regulations or if we should find among taboo mechanisms some which like neurotic obsessions give simultaneous expression to both currents, we would have established what is practically the most important point in the psychological correspondence between taboo and compulsion neurosis.

We have already mentioned that the two fundamental taboo prohibitions are inaccessible to our analysis because they belong to totemism; another part of the taboo rules is of secondary origin and cannot be used for our purpose. For among these races taboo has become the general form of law giving and has helped to promote social tendencies which are certainly younger than taboo itself, as for instance, the taboos imposed by chiefs and priests to insure their property and privileges. But there still remains a large group of laws which we may undertake to investigate. Among these I lay stress on those taboos which are attached \textit{(a)} to enemies, \textit{(b)} to chiefs, and \textit{(c)} to the dead; the material for our investigation is taken from the excellent collection of J. G. Frazer in his great work, \textit{The Golden Bough}.\textsuperscript{1}

\textbf{(a) The Treatment of Enemies}

Inclined as we may have been to ascribe to savage and semi-savage races uninhibited and remorseless cruelty towards their enemies, it is of great interest to us to learn that with them, too, the killing of a person compels the observation of a series of rules which are associated with taboo customs. These rules are easily brought under four groups; they demand 1. reconciliation with the slain enemy, 2. restrictions, 3. acts of expiation, and purifications of the manslayer, and 4. certain ceremonial rites. The incomplete reports do not allow us to decide with certainty how general or how isolated such taboo customs may be among these races, but this is a matter of indifference as far as our interest in these occurrences is concerned. Still, it may be assumed that we are dealing with widespread customs and not with isolated peculiarities.

The reconciliation customs practised on the island of Timor, after a victorious band of warriors has returned with the severed heads of the vanquished enemy, are especially significant because the leader of the expedition is subject to heavy additional restrictions. "At the solemn entry of the victors, sacrifices are made to conciliate the souls of the enemy; otherwise one would have to expect harm to come to the victors. A dance is given and a song is sung in which the slain enemy is mourned\textsuperscript{1}.

\textsuperscript{1} Third Edition, Part II: \textit{Taboo and the Perils of the Soul}, 1911.
and his forgiveness is implored: 'Be not angry,' they say, 'because your head is here with us; had we been less lucky, our heads might have been exposed in your village. We have offered the sacrifice to appease you. Your spirit may now rest and leave us at peace. Why were you our enemy? Would it not have been better that we should remain friends? Then your blood would not have been spilt and your head would not have been cut off.'"

Similar customs are found among the Palu in Celebes; the Gallas sacrifice to the spirits of their dead enemies before they return to their home villages.

Other races have found methods of making friends, guardians and protectors out of their former enemies after they are dead. This consists in the tender treatment of the severed heads, of which many wild tribes of Borneo boast. When the See-Dayaks of Sarawak bring home a head from a war expedition, they treat it for months with the greatest kindness and courtesy and address it with the most endearing names in their language. The best morsels from their meals are put into its mouth, together with titbits and cigars. The dead enemy is repeatedly entreated to hate his former friends and to bestow his love upon his new hosts because he has now become one of them. It would be a great mistake to think that any derision is attached to this treatment, horrible though it may seem to us.

Observers have been struck by the mourning for the enemy after he is slain and scalped, among several of the wild tribes of North America. When a Choctaw had killed an enemy he began a month’s mourning during which he submitted himself to serious restrictions. The Dakota Indians mourned in the same way. One authority mentions that the Osaga Indians after mourning for their own dead mourned for their foes as if they had been friends.

Before proceeding to the other classes of taboo customs for the treatment of enemies, we must define our position in regard to a pertinent objection. Both Frazer as well as other authorities may well be quoted against us to show that the motive for these rules of reconciliation is quite simple and has nothing to do with "ambivalence." These races are dominated by a superstitious fear of the spirits of the slain, a fear which was also familiar to classical antiquity, and which the great British dramatist brought upon the stage in the hallucinations of Macbeth and Richard the Third. From this superstition all the reconciliation rules as well as the restrictions and expiations which we shall discuss

---

2 Paulitschke, *Ethnography of North-east Africa*.
4 J. O. Dorsay, see Frazer, *Taboo*, etc., p. 181.
later can be logically deduced; moreover, the ceremonies included in
the fourth group also argue for this interpretation, since the only explana-
tion of which they admit is the effort to drive away the spirits of the
slain which pursue the manslayers.¹ Besides, the savages themselves
directly admit their fear for the spirits of their slain foes and trace back
the taboo customs under discussion to this fear.

This objection is certainly pertinent and if it were adequate as well
we would gladly spare ourselves the trouble of our attempt to find a
further explanation. We postpone the consideration of this objection
until later and for the present merely contrast it to the interpretation
derived from our previous discussion of taboo. All these rules of taboo
lead us to conclude that other impulses besides those that are merely
hostile find expression in the behaviour towards enemies. We see in
them manifestations of repentance, of regard for the enemy, and of a
bad conscience for having slain him. It seems that the commandment,
Thou shalt not slay, which could not be violated without punishment,
existed also among these savages, long before any legislation was received
from the hands of a god.

We now return to the remaining classes of taboo rules. The restrictions
laid upon the victorious manslayer are unusually frequent and are
mostly of a serious nature. In Timor (compare the reconciliation cus-
toms mentioned above) the leader of the expedition cannot return to his
house under any circumstances. A special hut is erected for him in
which he spends two months engaged in the observance of various rules
of purification. During this period he may not see his wife or nourish
himself; another person must put his food in his mouth.² Among some
Dayak tribes warriors returning from a successful expedition must
remain sequestered for several days and abstain from certain foods;
they may not touch iron and must remain away from their wives. In
Logea, an island near New Guinea, men who have killed an enemy or
have taken part in the killing, lock themselves up in their houses for a
week. They avoid every intercourse with their wives and friends, they
do not touch their victuals with their hands, and live on nothing but
vegetable foods which are cooked for them in special dishes. As a reason
for this last restriction it is alleged that they must smell the blood of
the slain, otherwise they would sicken and die. Among the Toaripi- or
Motumotu-tribes in New Guinea a manslayer must not approach his
wife and must not touch his food with his fingers. A second person must
feed him with special food. This continues until the next new moon.

¹ Frazer, Taboo, pp. 166–174. These ceremonies consist of hitting shields, shouting,
bellowing and making noises with various instruments, etc.
² Frazer, Taboo, p. 166, referring to S. Mueller, Reisen en Onderzoekingen in den
Indischen Archipel. (Amsterdam, 1857).
victorious slayer mentioned by Frazer, and emphasize only such cases in which the character of taboo is especially noticeable or where the restriction appears in connection with expiation, purification and ceremonial.

Among the Monumbos in New Guinea a man who has killed an enemy in combat becomes "unclean," the same word being employed which is applied to women during menstruation or confinement. For a considerable period he is not allowed to leave the men's club-house, while the inhabitants of his village gather about him and celebrate his victory with songs and dances. He must not touch any one, not even his wife and children; if he did so they would be afflicted with boils. He finally becomes clean through washing and other ceremonies.

Among the Natchez in North America young warriors who had procured their first scalp were bound for six months to the observance of certain renunciations. They were not allowed to sleep with their wives or to eat meat, and received only fish and maize pudding as nourishment. When a Choctaw had killed and scalped an enemy he began a period of mourning for one month, during which he was not allowed to comb his hair. When his head itched he was not allowed to scratch it with his hand but used a small stick for this purpose.

After a Pima Indian had killed an Apache he had to submit himself to severe ceremonies of purification and expiation. During a fasting period of sixteen days he was not allowed to touch meat or salt, to look at a fire or to speak to any one. He lived alone in the woods, where he was waited upon by an old woman who brought him a small allowance of food; he often bathed in the nearest river, and carried a lump of clay on his head as a sign of mourning. On the seventeenth day there took place a public ceremony through which he and his weapons were solemnly purified. As the Pima Indians took the manslayer taboo much more seriously than their enemies and, unlike them, did not postpone expiation and purification until the end of the expedition, their prowess in war suffered very much through their moral severity or what might be called their piety. In spite of their extraordinary bravery they proved to be unsatisfactory allies to the Americans in their wars against the Apaches.

The detail and variations of these expiatory and purifying ceremonies after the killing of an enemy would be most interesting for purposes of a more searching study, but I need not enumerate any more of them here because they cannot furnish us with any new points of view. I might mention that the temporary or permanent isolation of the professional executioner, which was maintained up to our time, is a case in point. The position of the "free-holder" in mediæval society really conveys a good idea of the "taboo" of savages.¹

¹ For these examples see Frazer, *Taboo*, pp. 165–170, "Manslayers Tabooed."
The current explanation of all these rules of reconciliation, restriction, expiation and purification, combines two principles, namely, the extension of the taboo of the dead to everything that has come into contact with him, and the fear of the spirit of the slain. In what combination these two elements are to explain the ceremonial, whether they are to be considered as of equal value or whether one of them is primary and the other secondary, and which one, is nowhere stated, nor would this be an easy matter to decide. In contradistinction to all this we emphasize the unity which our interpretation gains by deducing all these rules from the ambivalence of the emotion of savages towards their enemies.

(h) The Taboo of Rulers

The behaviour of primitive races towards their chiefs, kings, and priests, is controlled by two principles which seem rather to supplement than to contradict each other. They must both be guarded and be guarded against.¹

Both objects are accomplished through innumerable rules of taboo. Why one must guard against rulers is already known to us; because they are the bearers of that mysterious and dangerous magic power which communicates itself by contact, like an electric charge, bringing death and destruction to any one not protected by a similar charge. All direct or indirect contact with this dangerous sacredness is therefore avoided, and where it cannot be avoided a ceremonial has been found to ward off the dreaded consequences. The Nubas in East Africa, for instance, believe that they must die if they enter the house of their priest-king, but that they escape this danger if, on entering, they bare the left shoulder and induce the king to touch it with his hand. Thus we have the remarkable case of the king's touch becoming the healing and protective measure against the very dangers that arise from contact with the king; but it is probably a question of the healing power of the intentional touching on the king's part in contradistinction to the danger of touching him, in other words, of the opposition between passivity and activity towards the king.

Where the healing power of the royal touch is concerned we do not have to look for examples among savages. In comparatively recent times the kings of England exercised this power upon scrofula, whence it was called "The King's Evil." Neither Queen Elizabeth nor any of her successors renounced this part of the royal prerogative. Charles I is said to have healed a hundred sufferers at one time, in the year 1633. Under his dissolute son Charles II, after the great English revolution had passed, royal healings of scrofula attained their greatest vogue.

¹ Frazer, Taboo, p. 132. "He must not only be guarded, he must also be guarded against."
This king is said to have touched close to a hundred thousand victims of scrofula in the course of his reign. The crush of those seeking to be cured used to be so great that on one occasion six or seven patients suffered death by suffocation instead of being healed. The skeptical king of Orange, William III, who became king of England after the banishment of the Stuarts, refused to exercise the spell; on the one occasion when he consented to practise the touch, he did so with words: "May God give you better health and more sense." \(^1\)

The following account will bear witness to the terrible effect of touching by virtue of which a person, even though unintentionally, becomes active against his king or against what belongs to him. A chief of high rank and great holiness in New Zealand happened to leave the remains of his meal by the roadside. A young slave came along, a strong healthy fellow, who saw what was left over and started to eat it. Hardly had he finished when a horrified spectator informed him of his offence in eating the meal of the chief. The man had been a strong, brave warrior, but as soon as he heard this he collapsed and was afflicted by terrible convulsions, from which he died towards sunset of the following day.\(^2\) A Maori woman ate a certain fruit and then learned that it came from a place on which there was a taboo. She cried out that the spirit of the chief whom she had thus offended would surely kill her. This incident occurred in the afternoon, and on the next day at twelve o'clock she was dead.\(^3\) The tinder box of a Maori chief once cost several persons their lives. The chief had lost it, and those who found it used it to light their pipes. When they learned whose property the tinder box was they all died of fright.\(^4\)

It is hardly astonishing that the need was felt to isolate dangerous persons like chiefs and priests, by building a wall around them which made them inaccessible to others. We surmise that this wall, which originally was constructed out of taboo rules, still exists to-day in the form of court ceremony.

But probably the greater part of this taboo of the rulers cannot be traced back to the need of guarding against them. The other point of view in the treatment of privileged persons, the need of guarding them from dangers with which they are threatened, has had a distinct share in the creation of taboo and therefore of the origin of court etiquette.

The necessity of guarding the king from every conceivable danger arises from his great importance for the weal and woe of his subjects. Strictly speaking, he is a person who regulates the course of the world; his people have to thank him not only for rain and sunshine, which

\(^2\) *Old New Zealand*, by a Pakeha Maori (London, 1884), see Frazer, *Taboo*, p. 135.
\(^4\) Frazer, l.c.
allow the fruits of the earth to grow, but also for the wind which brings the ships to their shores and for the solid ground on which they set their feet.¹

These savage kings are endowed with a wealth of power and an ability to bestow happiness which only gods possess; certainly in later stages of civilization none but the most servile courtiers would play the hypocrite to the extent of crediting their sovereigns with the possession of attributes similar to these.

It seems like an obvious contradiction that persons of such perfection of power should themselves require the greatest care to guard them against threatening dangers, but this is not the only contradiction revealed in the treatment of royal persons on the part of savages. These races consider it necessary to watch over their kings to see that they use their powers in the right way; they are by no means sure of their good intentions or of their conscientiousness. A strain of mistrust is mingled with the motivation of the taboo rules for the king. "The idea that early kingdoms are despotisms," says Frazer,² "in which the people exist only for the sovereign, is wholly inapplicable to the monarchies we are considering. On the contrary, the sovereign in them exists only for his subjects: his life is only valuable so long as he discharges the duties of his position by ordering the course of nature for his people's benefit. So soon as he fails to do so, the care, the devotion, the religious homage which they had hitherto lavished on him cease and are changed into hatred and contempt; he is ignominiously dismissed and may be thankful if he escapes with his life. Worshipped as a god one day, he is killed as a criminal the next. But in this changed behaviour of the people there is nothing capricious or inconsistent. On the contrary, their conduct is quite consistent. If their king is their god he is, or should be, also their preserver; and if he will not preserve them he must make room for another who will. So long, however, as he answers their expectations, there is no limit to the care which they take of him, and which they compel him to take of himself. A king of this sort lives hedged in by ceremonious etiquette, a network of prohibitions and observances, of which the intention is not to contribute to his dignity, much less to his comfort, but to restrain him from conduct which, by disturbing the harmony of nature, might involve himself, his people, and the universe in one common catastrophe. Far from adding to his comfort, these observances, by trammelling his every act, annihilate his freedom and often render the very life, which it is their object to preserve, a burden and sorrow to him."

One of the most glaring examples of thus fettering and paralysing a

¹ Frazer, Taboo. The Burden of Royalty, p. 7.
² I.e., p. 7.
holy ruler through taboo ceremonial seems to have been reached in the life routine of the Mikado of Japan, as it existed in earlier centuries. A description which is now over two hundred years old 1 relates: "He thinks that it would be very prejudicial to his dignity and holiness to touch the ground with his feet; for this reason when he intends to go anywhere, he must be carried thither on men's shoulders. Much less will they suffer that he should expose his sacred person to the open air, and the sun is not thought worthy to shine on his head. There is such a holiness ascribed to all the parts of his body that he dares to cut off neither his hair, nor his beard, nor his nails. However, lest he should grow too dirty, they may clean him in the night when he is asleep; because they say that what is taken from his body at that time, hath been stolen from him, and that such a theft does not prejudice his holiness or dignity. In ancient times, he was obliged to sit on the throne for some hours every morning, with the imperial crown on his head; but to sit altogether like a statue without stirring either hands or feet, head or eyes, nor indeed any part of his body, because by this means it was thought that he could preserve peace and tranquillity in his empire; for if unfortunately, he turned himself on one side or other, or if he looked a good while towards any part of his dominion, it was apprehended that war, famine, fire or some other great misfortune was near at hand to desolate the country."

Some of the taboos to which barbarian kings are subject vividly recall the restrictions placed on murderers. On Shark Point at Cape Padron in Lower Guinea (West Africa), a priest-king called Kukulu lives alone in a woods. He is not allowed to touch a woman or to leave his house and cannot even rise out of his chair, in which he must sleep in a sitting position. If he should lie down the wind would cease and shipping would be disturbed. It is his function to keep storms in check, and in general, to see to an even, healthy condition of the atmosphere. 2 The more powerful a king of Loango is, says Bastian, the more taboos he must observe. The heir to the throne is also bound to them from childhood on; they accumulate about him while he is growing up, and by the time of his accession he is suffocated by them.

Our interest in the matter does not require us to take up more space to describe more fully the taboos that cling to royal and priestly dignity. We merely add that restrictions as to freedom of movement and diet play the main rôle among them. But two examples of taboo ceremonial taken from civilized nations, and therefore from much higher stages of

1 Kaempfer, History of Japan, see in Frazer, l.c., p. 3.
2 Bastian, The German Expedition to the Coast of Loango (Jena 1874), cited by Frazer, l.c., p. 5.
culture, will indicate to what an extent association with these privileged persons tends to preserve ancient customs.

The *flamen Dialis*, the high-priest of Jupiter in Rome, had to observe an extraordinarily large number of taboo rules. He was not allowed to ride, to see a horse or an armed man, to wear a ring that was not broken, to have a knot in his garments, to touch wheat flour or leaven, or even to mention by name a goat, a dog, raw meat, beans and ivy; his hair could only be cut by a free man and with a bronze knife, his hair combings and nail parings had to be buried under a lucky tree; he could not touch the dead, go into the open with bare head, and similar prohibitions. His wife, the *flaminica*, also had her own prohibitions: she was not allowed to ascend more than three steps on a certain kind of stairs and on certain holidays she could not comb her hair; the leather for her shoes could not be taken from any animal that had died a natural death but only from one that had been slaughtered or sacrificed; when she heard thunder she was unclean until she had made an expiatory sacrifice.¹

The old kings of Ireland were subject to a series of very curious restrictions, the observance of which was expected to bring every blessing to the country while their violation entailed every form of evil. The complete description of these taboos is given in the *Book of Rights*, of which the oldest manuscript copies bear the dates 1390 and 1418. The prohibitions are very detailed and concern certain activities at specified places and times; in some cities, for instance, the king cannot stay on a certain day of the week, while at some specified hour this or that river may not be crossed, or again there is a plain on which he cannot camp a full nine days, etc.²

Among many savage races the severity of the taboo restrictions for the priest-kings has had results of historic importance which are especially interesting from our point of view. The honour of being a priest-king ceased to be desirable; the person in line for the succession often used every means to escape it. Thus, in Cambodia, where there is a fire and water king, it is often necessary to use force to compel the successor to accept the honour. On Niue or Savage Island, a coral island in the Pacific Ocean, monarchy actually came to an end because nobody was willing to undertake the responsible and dangerous office. In some parts of West Africa a general council is held after the death of the king to determine upon the successor. The man on whom the choice falls is seized, tied and kept in custody in the fetish house until he has declared himself willing to accept the crown. Sometimes the presumptive successor to the throne finds ways and means to avoid the intended honour; thus it is related of a certain chief that he used to go armed day and night

¹ *Frazer, l.c., p. 135.*
² *Frazer, l.c., p. 11.*
and resist by force every attempt to place him on the throne. Among the Negroes of Sierra Leone the resistance against accepting the kingly honour was so great that most of the tribes were compelled to make strangers their kings.

Frazer makes these conditions responsible for the fact that in the development of history a separation of the original priest-kingship into a spiritual and a secular power finally took place. Kings, crushed by the burden of their holiness, became incapable of exercising their power over real things and had to leave this to inferior but executive persons who were willing to renounce the honours of royal dignity. From these there grew up the secular rulers, while the spiritual over-lordship, which was now of no practical importance, was left to the former taboo kings. It is well known to what extent this hypothesis finds confirmation in the history of old Japan.

A survey of the picture of the relations of primitive peoples to their rulers gives rise to the expectation that our advance from description to psychoanalytic understanding will not be difficult. These relations are of an involved nature and are not free from contradictions. Rulers are granted great privileges which are practically cancelled by taboo prohibitions in regard to other privileges. They are privileged persons, they can do or enjoy what is withheld from the rest through taboo. But in contrast to this freedom they are restricted by other taboos which do not affect the ordinary individual. Here, therefore, is the first contrast, which amounts almost to a contradiction, between an excess of freedom and an excess of restriction as applied to the same persons. They are credited with extraordinary magic powers, and contact with their person or their property is therefore feared, while on the other hand the most beneficial effect is expected from these contacts. This seems to be a second and an especially glaring contradiction; but we have already learned that it is only apparent. The king's touch, exercised by him with benevolent intention, heals and protects; it is only when a common man touches the king or his royal effects that the contact becomes dangerous, and this is probably because the act may recall aggressive tendencies. Another contradiction which is not so easily solved is expressed in the fact that great power over the processes of nature is ascribed to the ruler and yet the obligation is felt to guard him with especial care against threatening dangers, as if his own power, which can do so much, were incapable of accomplishing this. A further difficulty in the relation arises because there is no confidence that the ruler will use his tremendous power to the advantage of his subjects as well as for his own protection; he is therefore distrusted and surveillance over him is considered to be justi-

1 A. Bastian, The German Expedition to the Coast of Loango, cited by Frazer, I.c., p. 18.
fied. The taboo etiquette, to which the life of the king is subject, simultaneously serves all these objects of exercising a tutelage over the king, of guarding him against dangers and of guarding his subjects against danger which he brings to them.

We are inclined to give the following explanation of the complicated and contradictory relation of the primitive peoples to their rulers. Through superstition as well as through other motives, various tendencies find expression in the treatment of kings, each of which is developed to the extreme without regard to the other. As a result of this, contradictions arise at which the intellect of savages takes no more offence than a highly civilized person would as long as it is only a question of religious matters or of "loyalty."

That would be so far so good; but the psychoanalytic technique may enable us to penetrate more deeply into the matter and to add something about the nature of these various tendencies. If we subject the facts as stated to analysis, just as if they formed the symptoms of a neurosis, our first attention would be directed to the excess of anxious worry which is said to be the cause of the taboo ceremonial. The concurrence of such excessive tenderness is very common in the neurosis and especially in the compulsion neurosis upon which we are drawing primarily for our comparison. We now thoroughly understand the origin of this tenderness. It occurs wherever, besides the predominant tenderness, there exists a contrary but unconscious stream of hostility, that is to say, wherever the typical case of an ambivalent affective attitude is realized.

The hostility is then cried down by an excessive increase of tenderness which is expressed as anxiety and becomes compulsive because otherwise it would not suffice for its task of keeping the unconscious opposition in a state of repression. Every psychoanalyst knows how infallibly this anxious excess of tenderness can be resolved even under the most improbable circumstances, as for instance, when it appears between mother and child, or in the case of affectionate married people. Applied to the treatment of privileged persons this theory of an ambivalent feeling would reveal that their veneration, their very deification, is opposed in the unconscious by an intense hostile tendency, so that, as we had expected, the situation of an ambivalent feeling is here realized. The distrust which certainly seems to contribute to the motivation of the royal taboo, would be another direct manifestation of the same unconscious hostility. Indeed the ultimate issues of this conflict show such a diversity among different races that we would not be at a loss for examples in which the proof of such hostility would be much easier. We learn from Frazer\(^1\) that the savage Timmes of Sierra Leone reserve the right to administer a beating to their elected king on the evening before his coro-

\(^1\) Lc., p. 18, citing Zwefel et Monstier, Voyage aux Sources du Niger, 1880.
nation, and that they make use of this constitutional right with such thoroughness that the unhappy ruler sometimes does not long survive his accession to the throne; for this reason the leaders of the race have made it a rule to elect some man against whom they have a particular grudge. Nevertheless, even in such glaring cases the hostility is not acknowledged as such, but is expressed as if it were a ceremonial.

Another trait in the attitude of primitive races towards their rulers recalls a mechanism which is universally present in mental disturbances, and is openly revealed in the so-called delusions of persecution. Here the importance of a particular person is extraordinarily heightened and his omnipotence is raised to the improbable in order to make it easier to attribute to him the responsibility for everything painful which happens to the patient. Savages really do not act differently towards their rulers when they ascribe to them power over rain and shine, wind and weather, and then dethrone or kill them because nature has disappointed their expectation of a good hunt or a ripe harvest. The prototype which the paranoiac reconstructs in his persecution mania, is found in the relation of the child to its father. Such omnipotence is regularly attributed to the father in the imagination of the son, and distrust of the father has been shown to be intimately connected with the highest esteem for him. When a paranoiac names a person of his acquaintance as his “persecutor,” he thereby elevates him to the paternal succession and brings him under conditions which enable him to make him responsible for all the misfortune which he experiences. Thus this second analogy between the savage and the neurotic may allow us to surmise how much in the relation of the savage to his ruler arises from the infantile attitude of the child to its father.

But the strongest support for our point of view, which seeks to compare taboo prohibitions with neurotic symptoms, is to be found in the taboo ceremonial itself, the significance of which for the status of kinship has already been the subject of our previous discussion. This ceremonial unmistakably reveals its double meaning and its origin from ambivalent tendencies if only we are willing to assume that the effects it produces are those which it intended from the very beginning. It not only distinguishes kings and elevates them above all ordinary mortals, but it also makes their life a torture and an unbearable burden and forces them into a thraldom which is far worse than that of their subjects. It would thus be the correct counterpart to the compulsive action of the neurosis, in which the suppressed impulse and the impulse which suppresses it meet in mutual and simultaneous satisfaction. The compulsive action is nominally a protection against the forbidden action; but we would say that actually it is a repetition of what is forbidden. The word “nominally” is here applied to the conscious whereas the word “actually”
applies to the unconscious instance of the psychic life. Thus also the taboo ceremonial of kings is nominally an expression of the highest veneration and a means of guarding them; actually it is the punishment for their elevation, the revenge which their subjects take upon them. The experiences which Cervantes makes Sancho Panza undergo as governor on his island have evidently made him recognize this interpretation of courtly ceremonial as the only correct one. It is very possible that this point would be corroborated if we could induce kings and rulers of today to express themselves on this point.

Why the emotional attitude towards rulers should contain such a strong unconscious share of hostility is a very interesting problem which, however, exceeds the scope of this book. We have already referred to the infantile father-complex; we may add that an investigation of the early history of kingship would bring the decisive explanations. Frazer has an impressive discussion of the theory that the first kings were strangers who, after a short reign, were destined to be sacrificed at solemn festivals as representatives of the deity; but Frazer himself does not consider his facts altogether convincing. Christian myths are said to have been still influenced by the after-effects of this evolution of kings.

(c) The Taboo of the Dead

We know that the dead are mighty rulers: we may be surprised to learn that they are regarded as enemies.

Among most primitive people the taboo of the dead displays, if we may keep to our infection analogy, a peculiar virulence. It manifests itself in the first place, in the consequences which result from contact with the dead, and in the treatment of the mourners for the dead. Among the Maori any one who had touched a corpse or who had taken part in its interment, became extremely unclean and was almost cut off from intercourse with his fellow beings; he was, as we say, boycotted. He could not enter a house, or approach persons or objects without infecting them with the same properties. He could not even touch his food with his own hands, which were now unclean and therefore quite useless to him. His food was put on the ground and he had no alternative except to seize it as best he could, with his lips and teeth, while he held his hands behind on his back. Occasionally he could be fed by another person who helped him to his food with outstretched arms so as not to touch the unfortunate one himself, but this assistant was then in turn subjected to almost equally oppressive restrictions. Almost every village contained some altogether disreputable individual, ostracized by society, whose wretched existence depended upon people’s charity. This creature

alone was allowed within arm's length of a person who had fulfilled the last duty towards the deceased. But as soon as the period of segregation was over and the person rendered unclean through the corpse could again mingle with his fellow-beings, all the dishes which he had used during the dangerous period were broken and all his clothing was thrown away.

The taboo customs after bodily contact with the dead are the same all over Polynesia, in Melanesia, and in a part of Africa; their most constant feature is the prohibition against handling one's food and the consequent necessity of being fed by somebody else. It is noteworthy that in Polynesia, or perhaps only in Hawaii, priest-kings were subject to the same restrictions during the exercise of holy functions. In the taboo of the dead on the Island of Tonga the abatement and gradual abolition of the prohibitions through the individual's own taboo power are clearly shown. A person who touched the corpse of a dead chieftain was unclean for ten months; but if he was himself a chief, he was unclean for only three, four, or five months, according to the rank of the deceased; if it was the corpse of the idolized head-chief even the greatest chiefs become taboo for ten months. These savages are so certain that any one who violates these taboo rules must become seriously ill and die, that according to the opinion of an observer, they have never yet dared to convince themselves of the contrary.

The taboo restrictions imposed upon persons whose contact with the dead is to be understood in the transferred sense, namely the mourning relatives such as widows and widowers, are essentially the same as those mentioned above, but they are of greater interest for the point we are trying to make. In the rules hitherto mentioned we see only the typical expression of the virulence and power of diffusion of the taboo; in those about to be cited we catch a gleam of the motives, including both the ostensible ones and those which may be regarded as the underlying and genuine motives.

Among the Shuswap in British Columbia widows and widowers have to remain segregated during their period of mourning; they must not use their hands to touch the body or the head and all utensils used by them must not be used by any one else. No hunter will want to approach the hut in which such mourners live, for that would bring misfortune; if the shadow of one of the mourners should fall on him he would become ill. The mourners sleep on thorn bushes, with which they also surround their beds. This last precaution is meant to keep off the spirit of the deceased; plainer still is the reported custom of other North American tribes where the widow, after the death of her husband, has to wear a

---

1 Frazer, *Taboo*, p. 148, etc.
kind of trousers of dried grass in order to make herself inaccessible to the approach of the spirit. Thus it is quite obvious that touching "in the transferred sense" is after all understood only as bodily contact, since the spirit of the deceased does not leave his kin and does not desist from "hovering about them," during the period of mourning.

Among the Agutainos, who live on Palawan, one of the Philippine Islands, a widow may not leave her hut for the first seven or eight days after her husband's death, except at night, when she need not expect encounters. Whoever sees her is in danger of immediate death and therefore she herself warns others of her approach by hitting the trees with a wooden stick with every step she takes; these trees all wither. Another observation explains the nature of the danger inherent in a widow. In the district of Mekeo, British New Guinea, a widower forfeits all civil rights and lives like an outlaw. He may not tend a garden, or show himself in public, or enter the village or go on the street. He slinks about like an animal, in the high grass or in the bushes, and must hide in a thicket if he sees anybody, especially a woman, approaching. This last hint makes it easy for us to trace back the danger of the widower or widow to the danger of temptation. The husband who has lost his wife must evade the desire for a substitute; the widow has to contend with the same wish, and besides this, she may arouse the desire of other men because she is without a master. Every such satisfaction through a substitute runs contrary to the intention of mourning and would cause the anger of the spirit to flare up.1

One of the most surprising, but at the same time one of the most instructive taboo customs of mourning among primitive races is the prohibition against pronouncing the name of the deceased. This is very widespread, and has been subjected to many modifications with important consequences.

Aside from the Australians and the Polynesians, who usually show us taboo customs in their best state of preservation, we also find this prohibition among races so far apart and unrelated to each other as the Samojedes in Siberia and the Todas in South India, the Mongolians of Tartary and the Tuaregs of the Sahara, the Aino of Japan and the Akamba and Nandi in Central Africa, the Tinguane in the Philippines and the inhabitants of the Nikobari Islands and of Madagascar and Borneo.2 Among some of these races the prohibition and its consequences hold good only for the period of mourning while in others it remains per-

1 The same patient whose "impossibilities" I have correlated with taboo (see above, p. 829) acknowledged that she always became indignant when she met anybody on the street who was dressed in mourning. "Such people should be forbidden to go out!" she said.

2 Frazer, I.c., p. 353.
manent; but in all cases it seems to diminish with the lapse of time after the death.

The avoidance of the name of the deceased is as a rule kept up with extraordinary severity. Thus, among many South American tribes, it is considered the gravest insult to the survivors to pronounce the name of the deceased in their presence, and the penalty set for it is no less than that for the slaying itself. At first it is not easy to guess why the mention of the name should be so abominated, but the dangers associated with it have called into being a whole series of interesting and important expedients to avoid this. Thus the Masai in Africa have hit upon the evasion of changing the name of the deceased immediately upon his death; he may now be mentioned without dread by this new name, while all the prohibitions remain attached to the old name. It seems to be assumed that the ghost does not know his new name and will not find it out. The Australian tribes on Adelaide and Encounter Bay are so consistently cautious that when a death occurs almost every person who has the same name as the deceased or a very similar one, exchanges it for another. Sometimes by a further extension of the same idea as seen among several tribes in Victoria and in North America all the relatives of the deceased change their names regardless of whether their names resemble the name of the deceased in sound. Among the Guaycuru in Paraguay the chief used to give new names to all the members of the tribe, on such sad occasions, which they then remembered as if they had always had them.2

Furthermore, if the deceased had the same name as an animal or object, etc., some of the races just enumerated thought it necessary to give these animals and objects new names, in order not to be reminded of the deceased when they mentioned them. Through this there must have resulted a never ceasing change of vocabulary, which caused a good deal of difficulty for the missionaries, especially where the interdiction upon a name was permanent. In the seven years which the missionary Dobrizhofer spent among the Abipons in Paraguay, the name for jaguar was changed three times and the words for crocodile, thorns and animal slaughter underwent a similar fate.3 But the dread of pronouncing a name which has belonged to a deceased person extends also to the mention of everything in which the deceased had any part, and a further important result of this process of suppression is that these races have no tradition or any historical reminiscences, so that we encounter the greatest difficulties in investigating their past history. Among a number of these primitive races compensating customs have also been estab-

1 Frazer, I.c., p. 352, etc.
2 Frazer, I.c., p. 357, citing an old Spanish observer, 1732.
3 Frazer, I.c., p. 360.
lished in order to re-awaken the names of the deceased after a long period of mourning; they are bestowed upon children who were regarded as reincarnations of the dead.

The strangeness of this taboo on names diminishes if we bear in mind that the savage looks upon his name as an essential part and an important possession of his personality, and that he ascribes the full significance of things to words. Our children do the same, as I have shown elsewhere, and therefore they are never satisfied with accepting a meaningless verbal similarity, but consistently conclude that when two things have identical names a deeper correspondence between them must exist. Numerous peculiarities of normal behaviour may lead civilized man to conclude that he too is not yet as far removed as he thinks from attributing the importance of things to mere names and feeling that his name has become peculiarly identified with his person. This is corroborated by psychoanalytic experiences, where there is much occasion to point out the importance of names in unconscious thought activity. As was to be expected, the compulsion neurotics behave just like savages in regard to names. They show the full "complex sensitiveness" towards the utterance and hearing of special words (as do also other neurotics) and derive a good many, often serious, inhibitions from their treatment of their own name. One of these taboo patients whom I knew, had adopted the avoidance of writing down her name for fear that it might get into somebody's hands who thus would come into possession of a piece of her personality. In her frenzied faithfulness, which she needed to protect herself against the temptations of her phantasy, she had created for herself the commandment, "not to give away anything of her personality." To this belonged first of all her name, then by further application her handwriting, so that she finally gave up writing.

Thus it no longer seems strange to us that savages should consider a dead person's name as a part of his personality and that it should be subjected to the same taboo as the deceased. Calling a dead person by name can also be traced back to contact with him, so that we can turn our attention to the more inclusive problem of why this contact is visited with such a severe taboo.

The nearest explanation would point to the natural horror which a corpse inspires, especially in view of the changes so soon noticeable after death. Mourning for a dead person must also be considered as a sufficient motive for everything which has reference to him. But horror of the corpse evidently does not cover all the details of taboo rules, and mourning can never explain to us why the mention of the dead is a severe insult to his survivors. On the contrary, mourning loves to preoccupy itself with the deceased, to elaborate his memory, and preserve

1 Stekel, Abraham.
it for the longest possible time. Something besides mourning must be made responsible for the peculiarities of taboo customs, something which evidently serves a different purpose. It is this very taboo on names which reveals this still unknown motive, and if the customs did not tell us about it we would find it out from the statements of the mourning savages themselves.

For they do not conceal the fact that they fear the presence and the return of the spirit of a dead person; they practise a host of ceremonies to keep him off and banish him. They look upon the mention of his name as a conjuration which must result in his immediate presence. They, therefore, consistently do everything to avoid conjuring and awakening a dead person. They disguise themselves in order that the spirit may not recognize them, they distort either his name or their own, and become infuriated when a ruthless stranger incites the spirit against his survivors by mentioning his name. We can hardly avoid the conclusion that they suffer, according to Wundt's expression, from the fear of "his soul now turned into a demon." 

With this understanding we approach Wundt's conception who, as we have heard, sees the nature of taboo in the fear of demons.

The assumption which this theory makes, namely, that immediately after death the beloved member of a family becomes a demon, from whom the survivors have nothing but hostility to expect, so that they must protect themselves by every means from his evil desires, is so peculiar that our first impulse is not to believe it. Yet almost all competent authors agree as to this interpretation of primitive races. Westermarck, who, in my opinion, gives altogether too little consideration to taboo, makes this statement: "On the whole facts lead me to conclude that the dead are more frequently regarded as enemies than as friends and that Jevons and Grant Allen are wrong in their assertion that it was formerly believed that the malevolence of the dead was as a rule directed only against strangers, while they were paternally concerned

5 The Origin and Development of Moral Conceptions, see section entitled "Attitude Towards the Dead," Vol. II, p. 424. Both the notes and the text show an abundance of corroborating and often very characteristic testimony, e.g., the Maori believed that "the nearest and most beloved relatives changed their nature after death and bore ill-will even to their former favourites." The Austral Negroes believe that every dead person is for a long time malevolent; the closer the relationship the greater the fear. The Central Eskimos are dominated by the idea that the dead come to rest very late and that at first they are to be feared as mischievous spirits who frequently hover about the village to spread illness, death and other evils. (Boas.)
about the life and welfare of their descendants and the members of their clan."

R. Kleinpaul has written an impressive book in which he makes use of the remnants of the old belief in souls among civilized races to show the relation between the living and the dead.¹ According to him too, this relation culminates in the conviction that the dead, thirsting for blood, draw the living after them. The living did not feel themselves safe from the persecutions of the dead until a body of water had been put between them. That is why it was preferred to bury the dead on islands or to bring them to the other side of a river: the expressions "here" and "beyond" originated in this way. Later moderation has restricted the malevolence of the dead to those categories where a peculiar right to feel rancour had to be admitted, such as the murdered who pursue their murderer as evil spirits, and those who, like brides, had died with their longings unsatisfied. Kleinpaul believes that originally, however, the dead were all vampires, who bore ill-will towards the living, and strove to harm them and deprive them of life. It was the corpse that first furnished the conception of an evil spirit.

The hypothesis that those whom we love best turn into demons after death obviously allows us to put a further question. What prompted primitive races to ascribe such a change of sentiment to the beloved dead? Why did they make demons out of them? According to Westermarck this question is easily answered.² "As death is usually considered the worst calamity that can overtake man, it is believed that the deceased are very dissatisfied with their lot. Primitive races believe that death comes only through being slain, whether by violence or by magic, and this is considered already sufficient reason for the soul to be vindictive and irritable. The soul presumably envies the living and longs for the company of its former kin; we can therefore understand that the soul should seek to kill them with diseases in order to be re-united with them. . . .

". . . A further explanation of the malevolence ascribed to souls lies in the instinctive fear of them, which is itself the result of the fear of death."

Our study of psychoneurotic disturbances points to a more comprehensive explanation, which includes that of Westermarck.

When a wife loses her husband, or a daughter her mother, it not infrequently happens that the survivor is afflicted with tormenting scruples, called "obsessive reproaches" which raise the question whether she herself has not been guilty through carelessness or neglect, of the death of the beloved person. No recalling of the care with which she nursed the

¹ R. Kleinpaul: The Living and the Dead in Folklore, Religion and Myth, 1898.
² l.c., p. 426.
invalid, or direct refutation of the asserted guilt can put an end to the
torture, which is the pathological expression of mourning and which in
time slowly subsides. Psychoanalytic investigation of such cases has
made us acquainted with the secret mainsprings of this affliction. We
have ascertained that these obsessive reproaches are in a certain sense
justified and therefore are immune to refutation or objections. Not that
the mourner has really been guilty of the death or that she has really been
careless, as the obsessive reproach asserts; but still there was something
in her, a wish of which she herself was aware, which was not displeased
with the fact that death came, and which would have brought it about
sooner had it been strong enough. The reproach now reacts against this
unconscious wish after the death of the beloved person. Such hostility,
hidden in the unconscious behind tender love, exists in almost all cases
of intensive emotional allegiance to a particular person, indeed it repre-
sents the classic case, the prototype of the ambivalence of human emo-
tions. There is always more or less of this ambivalence in everybody’s
disposition; normally it is not strong enough to give rise to the obsessive
reproaches we have described. But where there is abundant predisposi-
tion for it, it manifests itself in the relation to those we love most, pre-
cisely where you would least expect it. The disposition to compulsion
neurosis which we have so often taken for comparison with taboo prob-
lems, is distinguished by a particularly high degree of this original
ambivalence of emotions.

We now know how to explain the supposed demonism of recently de-
parted souls and the necessity of being protected against their hostility
through taboo rules. By assuming a similar high degree of ambivalence
in the emotional life of primitive races such as psychoanalysis ascribes
to persons suffering from compulsion neurosis, it becomes comprehen-
sible that the same kind of reaction against the hostility latent in the
unconscious behind the obsessive reproaches of the neurotic should also
be necessary here after the painful loss had occurred. But this hostility,
which is painfully felt in the unconscious in the form of satisfaction
with the demise, experiences a different fate in the case of primitive
man: the defence against it is accomplished by displacement upon the
object of hostility, namely, the dead. We call this defence process, fre-
quent both in normal and diseased psychic life, a projection. The sur-
vivor will deny that he has ever entertained hostile impulses toward the
beloved dead; but now the soul of the deceased entertains them and
will try to give vent to them during the entire period of mourning. In
spite of the successful defence through projection, the punitive and
remorseful character of this emotional reaction manifests itself in being
afraid, in self-imposed renunciations and in subjection to restrictions
which are partly disguised as protective measures against the hostile
demon. Thus we find again that taboo has grown out of the soil of an ambivalent emotional attitude. The taboo of the dead also originates from the opposition between the conscious grief and the unconscious satisfaction at death. If this is the origin of the resentment of spirits it is self-evident that just the nearest and formerly most beloved survivors have to fear it most.

As in neurotic symptoms, the taboo regulations also evince opposite feelings. Their restrictive character expresses mourning, while they also betray very clearly what they are trying to conceal, namely, the hostility towards the dead, which is now motivated as self-defence. We have learnt to understand part of the taboo regulations as temptation fears. A dead person is defenceless, which must act as an incitement to satisfy hostile desires entertained against him; this temptation has to be opposed by the prohibition.

But Westermarck is right in not admitting any difference in the savage’s conception between those who have died by violence and those who have died a natural death. As will be shown later,¹ in the unconscious mode of thinking even a natural death is perceived as murder; the person was killed by evil wishes. Any one interested in the origin and meaning of dreams dealing with the death of dear relatives such as parents and brothers and sisters will find that the same feeling of ambivalence is responsible for the fact that the dreamer, the child, and the savage all have the same attitude towards the dead.²

A little while ago we challenged Wundt’s conception, which explains the nature of taboo through the fear of demons, and yet we have just agreed with the explanation which traces back the taboo of the dead to a fear of the soul of the dead after it has turned into a demon. This seems like a contradiction, but it will not be difficult for us to explain it. It is true that we have accepted the idea of demons, but we know that this assumption is not something final which psychology cannot resolve into further elements. We have, as it were, exposed the demons by recognizing them as mere projections of hostile feelings which the survivor entertains toward the dead.

The double feeling—tenderness and hostility—against the deceased, which we consider well founded, endeavours to assert itself at the time of bereavement as mourning and satisfaction. A conflict must ensue between these contrary feelings, and as one of them, namely the hostility, is altogether or for the greater part unconscious, the conflict cannot result in a conscious difference in the form of hostility or tenderness as, for instance, when we forgive an injury inflicted upon us by some one we love. The process usually adjusts itself through a special psychic

¹ Cf. Chap. III.
² See: Freud The Interpretation of Dreams.
mechanism, which is designated in psychoanalysis as projection. This unknown hostility, of which we are ignorant and of which we do not wish to know, is projected from our inner perception into the outer world and is thereby detached from our own person and attributed to the other. Not we, the survivors, rejoice because we are rid of the deceased, on the contrary, we mourn for him; but now, curiously enough, he has become an evil demon who would rejoice in our misfortune and who seeks our death. The survivors must now defend themselves against this evil enemy; they are freed from inner oppression, but they have only succeeded in exchanging it for an affliction from without.

It is not to be denied that this process of projection, which turns the dead into malevolent enemies, finds some support in the real hostilities of the dead which the survivors remember and with which they really can reproach the dead. These hostilities are harshness, the desire to dominate, injustice, and whatever else forms the background of even the most tender relations between men. But the process cannot be so simple that this factor alone could explain the origin of demons by projection. The offences of the dead certainly motivate in part the hostility of the survivors, but they would have been ineffective if they had not given rise to this hostility and the occasion of death would surely be the least suitable occasion for awakening the memory of the reproaches which justly could have been brought against the deceased. We cannot dispense with the unconscious hostility as the constant and really impelling motive. This hostile tendency towards those nearest and dearest could remain latent during their lifetime, that is to say, it could avoid betraying itself to consciousness either directly or indirectly through any substitutive formation. However, when the person who was simultaneously loved and hated died, this was no longer possible, and the conflict became acute. The mourning originating from the enhanced tenderness, became on the one hand more intolerant of the latent hostility, while on the other hand it could not tolerate that the latter should not give origin to a feeling of pure gratification. Thus there came about the repression of the unconscious hostility through projection, and the formation of the ceremonial in which fear of punishment of demons finds expression. With the termination of the period of mourning, the conflict also loses its acuteness so that the taboo of the dead can be abated or sink into oblivion.

Having thus explained the basis on which the very instructive taboo of the dead has grown up, we must not miss the opportunity of adding a few observations which may become important for the understanding to taboo in general.
The projection of unconscious hostility upon demons in the taboo of the dead is only a single example from a whole series of processes to which we must grant the greatest influence in the formation of primitive psychic life. In the foregoing case the mechanism of projection is used to settle an emotional conflict; it serves the same purpose in a large number of psychic situations which lead to neuroses. But projection is not specially created for the purpose of defence, it also comes into being where there are no conflicts. The projection of inner perceptions to the outside is a primitive mechanism which, for instance, also influences our sense-perceptions, so that it normally has the greatest share in shaping our outer world. Under conditions that have not yet been sufficiently determined even inner perceptions of ideational and emotional processes are projected outwardly, like sense perceptions, and are used to shape the outer world, whereas they ought to remain in the inner world. This is perhaps genetically connected with the fact that the function of attention was originally directed not towards the inner world, but to the stimuli streaming in from the outer world, and only received reports of pleasure and pain from the endopsychic processes. Only with the development of the language of abstract thought through the association of sensory remnants of word representations with inner processes, did the latter gradually become capable of perception. Before this took place primitive man had developed a picture of the outer world through the outward projection of inner perceptions, which we, with our reinforced conscious perception, must now translate back into psychology.

The projection of their own evil impulses upon demons is only a part of what has become the world system (“Weltanschauung”) of primitive man which we shall discuss later as “animalism.” We shall then have to ascertain the psychological nature of such a system formation and the points of support which we shall find in the analysis of these system formations will again bring us face to face with the neurosis. For the present we merely wish to suggest that the “secondary elaboration” of the dream content is the prototype of all these system formations. And let us not forget that beginning at the stage of system formation there are two origins for every act judged by consciousness, namely the systematic and the real but unconscious origin.  

Wundt remarks that “among the influences which myth everywhere ascribes to demons the evil ones preponderate, so that according to the religions of races evil demons are evidently older than good demons.” Now it is quite possible that the whole conception of demons was derived

---

1 See: The Interpretation of Dreams.  
2 The projection creations of primitive man resemble the personifications through which the poet projects his warring impulses out of himself, as separated individuals.  
3 Myth and Religion, p. 129.
from the extremely important relation to the dead. In the further course of human development the ambivalence inherent in this relation then manifested itself by allowing two altogether contrary psychic formations to issue from the same root, namely, the fear of demons and of ghosts, and the reverence for ancestors.\(^1\) Nothing testifies so much to the influence of mourning on the origin of belief in demons as the fact that demons were always taken to be the spirits of persons not long dead. Mourning has a very distinct psychic task to perform, namely, to detach the memories and expectations of the survivors from the dead. When this work is accomplished the grief, and with it the remorse and reproach, lessens, and therefore also the fear of the demon. But the very spirits which at first were feared as demons now serve a friendlier purpose; they are revered as ancestors and appealed to for help in times of distress.

If we survey the relation of survivors to the dead through the course of the ages, it is very evident that the ambivalent feeling has extraordinarily abated. We now find it easy to suppress whatever unconscious hostility towards the dead there may still exist without any special psychic effort on our part. Where formerly satisfied hate and painful tenderness struggled with each other, we now find piety, which appears like a cicatrice and demands: *De mortuis nil nisi bonum.* Only neurotics still blur the mourning for the loss of their dear ones with attacks of compulsive reproaches which psychoanalysis reveals as the old ambivalent emotional feeling. How this change was brought about, and to what extent constitutional changes and real improvement of familiar relations share in causing the abatement of the ambivalent feeling, need not be discussed here. But this example would lead us to assume that the psychic impulses of primitive man possessed a higher degree of ambivalence than is found at present among civilized human beings. With the decline of this ambivalence the taboo, as the compromise symptom of the ambivalent conflict, also slowly disappeared. Neurotics who are compelled to reproduce this conflict, together with the taboo resulting from it, may be said to have brought with them an atavistic remnant in the form of an archaic constitution the compensation of which in the interest of cultural demands entails the most prodigious psychic efforts on their part.

As this point we may recall the confusing information which Wundt offered us about the double meaning of the word taboo, namely, holy and unclean (see above). It was supposed that originally the word taboo

---

\(^1\) In the psychoanalysis of neurotic persons who suffer, or have suffered, in their childhood from the fear of ghosts, it is often not difficult to expose these ghosts as the parents. Compare also in this connection the communication of P. Haéberlin, *Sexual Ghosts* (Sexual Problems, Feb. 1912), where it is a question of another erotically accentuated person, but where the father was dead.
did not yet mean holy and unclean but signified something demonic, something which may not be touched, thus emphasizing a characteristic common to both extremes of the later conception; this persistent common trait proves, however, that an original correspondence existed between what was holy and what was unclean, which only later became differentiated.

In contrast to this, our discussion readily shows that the double meaning in question belonged to the word taboo from the very beginning and that it serves to designate a definite ambivalence as well as everything which has come into existence on the basis of this ambivalence. Taboo is itself an ambivalent word and by way of supplement we may add that the established meaning of this word might of itself have allowed us to guess what we have found as the result of extensive investigation, namely, that the taboo prohibition is to be explained as the result of an emotional ambivalence. A study of the oldest languages has taught us that at one time there were many such words which included their own contrasts so that they were in a certain sense ambivalent, though perhaps not exactly in the same sense as the word taboo. Slight vocal modifications of this primitive word containing two opposite meanings later served to create a separate linguistic expression for the two opposites originally united in one word.

The word taboo has had a different fate; with the diminished importance of the ambivalence which it connotes, it has itself disappeared, or rather, the words analogous to it have vanished from the vocabulary. In a later connection I hope to be able to show that a tangible historic change is probably concealed behind the fate of this conception; that the word at first was associated with definite human relations which were characterized by great emotional ambivalence from which it expanded to other analogous relations.

Unless we are mistaken, the understanding of taboo also throws light upon the nature and origin of conscience. Without stretching ideas we can speak of a taboo conscience and a taboo sense of guilt after the violation of a taboo. Taboo conscience is probably the oldest form in which we meet the phenomenon of conscience.

For what is "conscience"? According to linguistic testimony it belongs to what we know most surely; in some languages its meaning is hardly to be distinguished from consciousness.

Conscience is the inner perception of objections to definite wish impulses that exist in us; but the emphasis is put upon the fact that this rejection does not have to depend on anything else, that it is sure of itself. This becomes even plainer in the case of a guilty conscience,

1 Compare my article on Abel's Gegensinn der Urwort in the Jahrbuch für Psychoanalytische und Psychopathologische Forschungen, Bd. II, 1910.
where we become aware of the inner condemnation of such acts which realized some of our definite wish impulses. Confirmation seems superfluous here; whoever has a conscience must feel in himself the justification of the condemnation, and the reproach for the accomplished action. But this same character is evinced by the attitude of savages towards taboo. Taboo is a command of conscience, the violation of which causes a terrible sense of guilt which is as self-evident as its origin is unknown.¹

It is, therefore, probable that conscience also originates on the basis of an ambivalent feeling from quite definite human relations which contain this ambivalence. It probably originates under conditions which are in force both for taboo and the compulsion neurosis, that is, one component of the two contrasting feelings is unconscious and is kept repressed by the compulsive domination of the other component. This is confirmed by many things which we have learned from our analysis of neurosis. In the first place the character of compulsion neurotics shows a predominant trait of painful conscientiousness which is a symptom of reaction against the temptation which lurks in the unconscious, and which develops into the highest degrees of guilty conscience as their illness grows worse. Indeed, one may venture the assertion that if the origin of guilty conscience could not be discovered through compulsion neurotic patients, there would be no prospect of ever discovering it. This task is successfully solved in the case of the individual neurotic, and we are confident of finding a similar solution in the case of races.

In the second place we cannot help noticing that the sense of guilt contains much of the nature of anxiety; without hesitation it may be described as "conscience phobia." But fear points to unconscious sources. The psychology of the neuroses taught us that when wish feelings undergo repression their libido becomes transformed into anxiety. In addition we must bear in mind that the sense of guilt also contains something unknown and unconscious, namely the motivation for the rejection. The character of anxiety in the sense of guilt corresponds to this unknown quantity.

If taboo expresses itself mainly in prohibitions it may well be considered self-evident, without remote proof from the analogy with neurosis that it is based on a positive, desireful impulse. For what nobody desires to do does not have to be forbidden, and certainly whatever is expressly forbidden must be an object of desire. If we applied this plausible theory to primitive races we would have to conclude that among their strongest temptations were desires to kill their kings and priests,

¹ It is an interesting parallel that the sense of guilt resulting from the violation of a taboo is in no way diminished if the violation took place unwittingly (see examples above), and that even in the Greek myth the guilt of Oedipus is not cancelled by the fact that it was incurred without his knowledge and will and even against them.
to commit incest, to abuse their dead and the like. That is not very probable. And if we should apply the same theory to those cases in which we ourselves seem to hear the voice of conscience most clearly we would arouse the greatest contradiction. For there we would assert with the utmost certainty that we did not feel the slightest temptation to violate any of these commandments, as for example, the commandment: Thou shalt not kill, and that we felt nothing but repugnance at the very idea.

But if we grant the testimony of our conscience the importance it claims, then the prohibition—the taboo as well as our moral prohibitions—becomes superfluous, while the existence of a conscience, in turn, remains unexplained and the connection between conscience, taboo and neurosis disappears. The net result of this would then be our present state of understanding unless we view the problem psychoanalytically.

But if we take into account the following results of psychoanalysis, our understanding of the problem is greatly advanced. The analysis of dreams of normal individuals has shown that our own temptation to kill others is stronger and more frequent than we had suspected and that it produces psychic effects even where it does not reveal itself to our consciousness. And when we have learnt that the obsessive rules of certain neurotics are nothing but measures of self-reassurance and self-punishment erected against the reinforced impulse to commit murder, we can return with fresh appreciation to our previous hypothesis that every prohibition must conceal a desire. We can then assume that this desire to murder actually exists and that the taboo as well as the moral prohibition are psychologically by no means superfluous but are, on the contrary, explained and justified through our ambivalent attitude towards the impulse to slay.

The nature of this ambivalent relation so often emphasized as fundamental, namely, that the positive underlying desire is unconscious, opens the possibility of showing further connections and explaining further problems. The psychic processes in the unconscious are not entirely identical with those known to us from our conscious psychic life, but have the benefit of certain notable liberties of which the latter are deprived. An unconscious impulse need not have originated where we find it expressed; it can spring from an entirely different place and may originally have referred to other persons and relations, but through the mechanism of displacement, it reaches the point where it comes to our notice. Thanks to the indestructibility of unconscious processes and their inaccessibility to correction, the impulse may be saved over from earlier times to which it was adapted to later periods and conditions in which its manifestations must necessarily seem foreign. These are all only hints, but a careful elaboration of them would show how important they may become for the understanding of the development of civilization.
In closing these discussions we do not want to neglect to make an observation that will be of use for later investigations. Even if we insist upon the essential similarity between taboo and moral prohibitions, we do not dispute that a psychological difference must exist between them. A change in the relations of the fundamental ambivalence can be the only reason why the prohibition no longer appears in the form of a taboo.

In the analytical consideration of taboo phenomena we have hitherto allowed ourselves to be guided by their demonstrable agreements with compulsion neurosis; but as taboo is not a neurosis but a social creation we are also confronted with the task of showing wherein lies the essential difference between the neurosis and a product of culture like the taboo.

Here again, I will take a single fact as my starting point. Primitive races fear a punishment for the violation of a taboo, usually a serious disease or death. This punishment threatens only him who has been guilty of the violation. It is different with the compulsion neurosis. If the patient wants to do something that is forbidden to him he does not fear punishment for himself, but for another person. The person is usually indefinite, but, by means of analysis, is easily recognized as someone very near and dear to the patient. The neurotic therefore acts as if he were altruistic, while primitive man seems egotistical. Only if retribution fails to overtake the taboo violator spontaneously does a collective feeling awaken among savages that they are all threatened through the sacrilege, and they hasten to inflict the omitted punishment themselves. It is easy for us to explain the mechanism of this solidarity. It is a question of fear of the contagious example, the temptation to imitate, that is to say, of the capacity of the taboo to infect. If some one has succeeded in satisfying the repressed desire, the same desire must manifest itself in all his companions; hence, in order to keep down this temptation, this envied individual must be despoiled of the fruit of his daring. Not infrequently the punishment gives the executors themselves an opportunity to commit the same sacrilegious act by justifying it as an expiation. This is really one of the fundamentals of the human code of punishment which rightly presumes the same forbidden impulses in the criminal and in the members of society who avenge his offence.

Psychoanalysis here confirms what the pious were wont to say, that we are all miserable sinners. How then shall we explain the unexpected nobility of the neurosis which fears nothing for itself and everything for the beloved person?

Psychoanalytic investigation shows that this nobility is not primary. Originally, that is to say at the beginning of the disease, the threat of punishment pertained to one's own person; in every case the fear was for one's own life; the fear of death being only later displaced upon
another beloved person. The process is somewhat complicated but we have a complete grasp of it. An evil impulse—a death wish—towards the beloved person is always at the basis of the formation of a prohibition. This is repressed through a prohibition, and the prohibition is connected with a certain act which by displacement usually substitutes the hostile for the beloved person, and the execution of this act is threatened with the penalty of death. But the process goes further and the original wish for the death of the beloved other person is then replaced by fear for his death. The tender altruistic trait of the neurosis therefore merely **compensates** for the opposite attitude of brutal egotism which is at the basis of it. If we designate as social these emotional impulses which are determined through regard for another person who is not taken as a sexual object, we can emphasize the withdrawal of these social factors as an essential feature of the neurosis, which is later disguised through over-compensation.

Without lingering over the origin of these social impulses and their relation to other fundamental impulses of man, we will bring out the second main characteristic of the neurosis by means of another example. The form in which taboo manifests itself has the greatest similarity to the touching phobia of neurotics, the *délire de toucher*. As a matter of fact this neurosis is regularly concerned with the prohibition of sexual touching and psychoanalysis has quite generally shown that the motive power which is deflected and displaced in the neurosis is of sexual origin. In taboo the forbidden contact has evidently not only sexual significance but rather the more general one of attack, of acquisition and of personal assertion. If it is prohibited to touch the chief or something that was in contact with him it means that an inhibition should be imposed upon the same impulse which on other occasions expresses itself in suspicious surveillance of the chief and even in physical ill-treatment of him before his coronation (see above). **Thus the preponderance of sexual components of the impulse over the social components is the determining factor of the neurosis.** But the social impulses themselves came into being through the union of egotistical and erotic components into special entities.

From this single example of a comparison between taboo and compulsion neurosis it is already possible to guess the relation between individual forms of the neurosis and the creations of culture, and in what respect the study of the psychology of the neurosis is important for the understanding of the development of culture.

In one way the neuroses show a striking and far-reaching correspondence with the great social productions of art, religion and philosophy, while again they seem like distortions of them. We may say that hysteria is a caricature of an artistic creation, a compulsion neurosis, a caricature
of a religion, and a paranoiac delusion a caricature of a philosophic sys-
tem. In the last analysis this deviation goes back to the fact that the neu-
roses are asocial formations; they seek to accomplish by private means
what arose in society through collective labour. In analysing the impulse
of the neuroses one learns that motive powers of sexual origin exercise
the determining influence in them, while the corresponding cultural cre-
tations rest upon social impulses and on such as have issued from the
combination of egotistical and sexual components. It seems that the
sexual need is not capable of uniting men in the same way as the de-
mands of self-preservation; sexual satisfaction is in the first place the
private concern of the individual.

Genetically the asocial nature of the neurosis springs from its original
tendency to flee from a dissatisfying reality to a more pleasurable world
of phantasy. This real world which neurotics shun is dominated by the
society of human beings and by the institutions created by them; the
estrangement from reality is at the same time a withdrawal from human
companionship.
III

ANIMISM, MAGIC AND THE OMNIPOTENCE OF THOUGHT

I

It is a necessary defect of studies which seek to apply the point of view of psychoanalysis to the mental sciences that they cannot do justice to either subject. They therefore confine themselves to the rôle of incentives and make suggestions to the expert which he should take into consideration in his work. This defect will make itself felt most strongly in an essay such as this which tries to treat of the enormous sphere called animism.¹

Animism in the narrower sense is the theory of psychic concepts, and in the wider sense, of spiritual beings in general. Animatism, the animation theory of seemingly inanimate nature, is a further subdivision which also includes animatism and animism. The name animism, formerly applied to a definite philosophic system, seems to have acquired its present meaning through E. B. Tylor.²

What led to the formulation of these names is the insight into the very remarkable conceptions of nature and the world of those primitive races known to us from history and from our own times. These races populate the world with a multitude of spiritual beings which are benevolent or malevolent to them, and attribute the causation of natural processes to these spirits and demons; they also consider that not only animals and plants, but inanimate things as well are animated by them. A third and perhaps the most important part of this primitive "nature philosophy" seems far less striking to us because we ourselves are not yet far enough removed from it, though we have greatly limited the existence of spirits

¹ The necessary crowding of the material also compels us to dispense with a thorough bibliography. Instead of this the reader is referred to the well-known works of Herbert Spencer, J. G. Frazer, A. Lang, E. B. Tylor and W. Wundt, from which all the statements concerning animism and magic are taken. The independence of the author can manifest itself only in the choice of the material and of opinions.
and today explain the processes of nature by the assumption of impersonal physical forces. For primitive people believe in a similar "animation" of human individuals as well. Human beings have souls which can leave their habitation and enter into other beings; these souls are the bearers of spiritual activities and are, to a certain extent, independent of the "bodies." Originally souls were thought of as being very similar to individuals; only in the course of a long evolution did they lose their material character and attain a high degree of "spiritualization." ¹

Most authors incline to the assumption that these soul conceptions are the original nucleus of the animistic system, that spirits merely correspond to souls that have become independent, and that the souls of animals, plants and things were formed after the analogy of human souls.

How did primitive people come to the peculiarly dualistic fundamental conceptions on which this animistic system rests? Through the observation, it is thought, of the phenomena of sleep (with dreams) and death, which resembles sleep, and through the effort to explain these conditions, which affect each individual so intimately. Above all, the problem of death must have become the starting point of the formation of the theory. To primitive man the continuation of life—immortality—would be self-evident. The conception of death is something accepted later, and only with hesitation, for even to us it is still devoid of content and unrealizable. Very likely discussions have taken place over the part which may have been played by other observations and experiences in the formation of the fundamental animistic conceptions such as dream imagery, shadows and reflections, but these have led to no conclusion. ²

If primitive man reacted to the phenomena that stimulated his reflection with the formation of conceptions of the soul, and then transferred these to objects of the outer world, his attitude will be judged to be quite natural and in no way mysterious. In view of the fact that animistic conceptions have been shown to be similar among the most varied races and in all periods, Wundt states that these "are the necessary psychological product of the myth-forming consciousness, and primitive animism may be looked upon as the spiritual expression of man's natural state in so far as this is at all accessible to our observation." ³ Hune has already justified the animation of the inanimate in his Natural History of Religions, where he said: "There is a universal tendency among mankind to conceive all beings like themselves and to transfer to every ob-

¹ Wundt, l.c., Chapter IV: Die Seelenvorstellungen.
² Compare, besides Wundt and H. Spencer and the instructive articles in the Encyclopaedia Britannica, 1911 (Animism, Mythology, and so forth).
³ I.c., p. 154.
ject those qualities with which they are familiarly acquainted and of which they are intimately conscious."¹

Animism is a system of thought, it gives not only the explanation of a single phenomenon, but makes it possible to comprehend the totality of the world from one point, as a continuity. Writers maintain that in the course of time three such systems of thought, three great world systems came into being: the animistic (mythological), the religious, and the scientific. Of these animism, the first system, is perhaps the most consistent and the most exhaustive, and the one which explains the nature of the world in its entirety. This first world system of mankind is now a psychological theory. It would go beyond our scope to show how much of it can still be demonstrated in the life of today, either as a worthless survival in the form of superstition, or in living form, as the foundation of our language, our belief, and our philosophy.

It is in reference to the successive stages of these three world systems that we say that animism in itself was not yet a religion but contained the prerequisites from which religions were later formed. It is also evident that myths are based upon animistic foundations, but the detailed relation of myths to animism seem unexplained in some essential points.

Our psychoanalytic work will begin at a different point. It must not be assumed that mankind came to create its first world system through a purely speculative thirst for knowledge. The practical need of mastering the world must have contributed to this effort. We are therefore not astonished to learn that something else went hand in hand with the animistic system, namely the elaboration of directions for making one’s self master of men, animals and things, as well as of their spirits. S. Reinach² wants to call these directions, which are known under the names of “sorcery and magic,” the strategy of animism. With Mauss and Hubert, I should prefer to compare them to a technique.³

Can the conceptions of sorcery and magic be separated? It can be done if we are willing on our own authority to put ourselves above the vagaries of linguistic usage. Then sorcery is essentially the art of influencing spirits by treating them like people under the same circumstances, that is to say by appeasing them, reconciling them, making them more favourably disposed to one, by intimidating them, by depriving them of their power and by making them subject to one’s will; all that is accomplished through the same methods that have been found effective with living people. Magic, however, is something else; it does not

³ Année Sociologique, Seventh Vol., 1904.
essentially concern itself with spirits, and uses special means, not the ordinary psychological method. We can easily guess that magic is the earlier and the more important part of animistic technique, for among the means with which spirits are to be treated there are also found the magic kind, and magic is also applied where spiritualization of nature has not yet, as it seems to us, been accomplished.

Magic must serve the most varied purposes. It must subject the processes of nature to the will of man, protect the individual against enemies and dangers, and give him the power to injure his enemies. But the principles on whose assumptions the magic activity is based, or rather the principle of magic, is so evident that it was recognized by all authors. If we may take the opinion of E. B. Tylor at its face value it can be most tersely expressed in his words: "mistaking an ideal connection for a real one." We shall explain this characteristic in the case of two groups of magic acts.

One of the most widespread magic procedures for injuring an enemy consists of making an effigy of him out of any kind of material. The likeness counts for little, in fact any object may be "named" as his image. Whatever is subsequently done to this image will also happen to the hated prototype; thus if the effigy has been injured in any place he will be afflicted by a disease in the corresponding part of the body. This same magic technique, instead of being used for private enmity, can also be employed for pious purposes and can thus be used to aid the gods against evil demons. I quote Frazer: "Every night when the sun-god Ra in ancient Egypt sank to his home in the glowing west he was assailed by hosts of demons under the leadership of the archfiend Apepi. All night long he fought them, and sometimes by day the powers of darkness sent up clouds even into the blue Egyptian sky to obscure his light and weaken his power. To aid the sun-god in this daily struggle, a ceremony was daily performed in his temple at Thebes. A figure of his foe Apepi, represented as a crocodile with a hideous face or a serpent with many coils, was made of wax, and on it the demon's name was written in green ink. Wrapt in a papyrus case, on which another likeness of Apepi had been drawn in green ink, the figure was then tied up with black hair, spat upon, hacked with a stone knife and cast on the ground. There the priest trod on it with his left foot again and again, and then burned it in a fire made of a certain plant of grass. When Apepi himself had thus been effectively disposed of, waxen effigies of each of his principal demons, and of their fathers, mothers, and children, were made and burnt in the same way. The service accompanied by the recitation

1 To frighten away a ghost with noise and cries is a form of pure sorcery; to force him to do something by taking his name is to employ magic against him.
of certain prescribed spells, was repeated not merely morning, noon and night, but whenever a storm was raging or a heavy rain had set in, or black clouds were stealing across the sky to hide the sun's bright disk. The fiends of darkness, clouds and rain, felt the injury inflicted on their images as if it had been done to themselves; they passed away, at least for a time and the beneficent sun-god shone out triumphant once more."  

There is a great mass of magic actions which show a similar motivation, but I shall lay stress upon only two, which have always played a great rôle among primitive races and which have been partly preserved in the myths and cults of higher stages of evolution: the art of causing rain and fruitfulness by magic. Rain is produced by magic means, by imitating it, and perhaps also by imitating the clouds and storm which produce it. It looks as if they wanted to "play rain." The Ainos of Japan, for instance, make rain by pouring out water through a big sieve, while others fit out a big bowl with sails and oars as if it were a ship, which is then dragged about the village and gardens. But the fruitfulness of the soil was assured by magic means by showing it the spectacle of human sexual intercourse. To cite one out of many examples; in some part of Java, the peasants used to go out into the fields at night for sexual intercourse when the rice was about to blossom in order to stimulate the rice to fruitfulness through their example. At the same time it was feared that proscribed incestuous relationships would stimulate the soil to grow weeds and render it unfruitful.

Certain negative rules, that is to say magic precautions, must be put into this first group. If some of the inhabitants of a Dayak village had set out on a hunt for wild-boars, those remaining behind were in the meantime not permitted to touch either oil or water with their hands, as such acts would soften the hunters' fingers and would let the quarry slip through their hands. Or when a Gilyak hunter was pursuing game in the woods, his children were forbidden to make drawings on wood or in the sand, as the paths in the thick woods might become as intertwined as the lines of the drawing and the hunter would not find his way home.

The fact that in these as in a great many other examples of magic influence, distance plays no part, telepathy is taken as a matter of course—will cause us no difficulties in grasping the peculiarity of magic.

There is no doubt about what is considered the effective force in all

1 The Biblical prohibition against making an image of anything living hardly sprang from any fundamental rejection of plastic art, but was probably meant to deprive magic, which the Hebraic religion proscribed, of one of its instruments. Frazer, l.c., p. 87, note.
2 The Magic Art, II, p. 98.
3 An echo of this is to be found in the Oedipus Rex of Sophocles.
4 The Magic Art, p. 120.
5 l.c., p. 122.
these examples. It is the similarity between the performed action and the expected happening. Frazer therefore calls this kind of magic imitative or homœopathic. If I want it to rain I only have to produce something that looks like rain or recalls rain. In a later phase of cultural development, instead of these magic conjurations of rain, processions are arranged to a house of god, in order to supplicate the saint who dwells there to send rain. Finally also this religious technique will be given up and instead an effort will be made to find out what would influence the atmosphere to produce rain.

In another group of magic actions the principle of similarity is no longer involved, but in its stead there is another principle the nature of which is well brought out in the following examples.

Another method may be used to injure an enemy. You possess yourself of his hair, his nails, anything that he has discarded, or even a part of his clothing, and do something hostile to these things. This is just as effective as if you had dominated the person himself, and anything that you do to the things that belong to him must happen to him too. According to the conception of primitive men a name is an essential part of a personality; if therefore you know the name of a person or a spirit you have acquired a certain power over its bearer. This explains the remarkable precautions and restrictions in the use of names which we have touched upon in the essay on taboo.¹ In these examples similarity is evidently replaced by relationship.

The cannibalism of primitive races derives its more sublime motivation in a similar manner. By absorbing parts of the body of a person through the act of eating we also come to possess the properties which belonged to that person. From this there follow precautions and restrictions as to diet under special circumstances. Thus a pregnant woman will avoid eating the meat of certain animals because their undesirable properties, for example, cowardice, might thus be transferred to the child she is nourishing. It makes no difference to the magic influence whether the connection is already abolished or whether it had consisted of only one very important contact. Thus, for instance, the belief in a magic bond which links the fate of a wound with the weapon which caused it can be followed unchanged through thousands of years. If a Melanesian gets possession of the bow by which he was wounded he will carefully keep it in a cool place in order thus to keep down the inflammation of the wound. But if the bow has remained in the possession of the enemy it will certainly be kept in close proximity to a fire in order that the wound may burn and become thoroughly inflamed. Pliny, in his Natural History, xxviii, advises spitting on the hand which has caused the injury if one regrets having injured some one; the pain of

¹ See preceding chapter, p. 850.
the injured person will then immediately be eased. Francis Bacon, in his *Natural History*, mentions the generally accredited belief that putting a salve on the weapon which has made a wound will cause this wound to heal of itself. It is said that even today English peasants follow this prescription, and that if they have cut themselves with a scythe they will from that moment on carefully keep the instrument clean in order that the wound may not fester. In June, 1902, a local English weekly reported that a woman called Matilde Henry of Norwich accidentally ran an iron nail into the sole of her foot. Without having the wound examined or even taking off her stocking she bade her daughter to oil the nail thoroughly in the expectation that then nothing could happen to her. She died a few days later of tetanus in consequence of postponed antisepsis.

The examples from this last group illustrate Frazer's distinction between contagious magic and imitative magic. What is considered as effective in these examples is no longer the similarity, but the association in space, the contiguity, or at least the imagined contiguity, or the memory of its existence. But since similarity and contiguity are the two essential principles of the processes of association of ideas, it must be concluded that the dominance of associations of ideas really explains all the madness of the rules of magic. We can see how true Tylor's quoted characteristic of magic: "mistaking an ideal connection for a real one," proves to be. The same may be said of Frazer's idea, who has expressed it in almost the same terms: "men mistook the order of their ideas for the order of nature, and hence imagined that the control which they have, or seem to have, over their thoughts, permitted them to have a corresponding control over things." ²

It will at first seem strange that this illuminating explanation of magic could have been rejected by some authors as unsatisfactory.³ But on closer consideration we must sustain the objection that the association theory of magic merely explains the paths that magic travels, and not its essential nature, that is, it does not explain the misunderstanding which bids it put psychological laws in place of natural ones. We are apparently in need here of a dynamic factor; but while the search for this leads the critics of Frazer's theory astray, it will be easy to give a satisfactory explanation of magic by carrying its association theory further and by entering more deeply into it.

First, let us examine the simpler and more important case of imitative magic. According to Frazer this may be practised by itself, whereas contagious magic as a rule presupposes the imitative.⁴ The motives which

---

3 Compare the article *Magic* (N. T. W.), in the *Encyclopedia Britannica*, 11th Ed.
4 I.e., p. 54.
impel one to exercise magic are easily recognized; they are the wishes of men. We need only assume that primitive man had great confidence in the power of his wishes. At bottom everything which he accomplished by magic means must have been done solely because he wanted it. Thus in the beginning only his wish is accentuated.

In the case of the child which finds itself under analogous psychic conditions, without being as yet capable of motor activity, we have elsewhere advocated the assumption that it at first really satisfies its wishes by means of hallucinations, in that it creates the satisfying situation through centrifugal excitements of its sensory organs. The adult primitive man knows another way. A motor impulse, the will, clings to his wish and this will which later will change the face of the earth in the service of wish fulfillment is now used to represent the gratification so that one may experience it, as it were, through motor hallucination. Such a representation of the gratified wish is altogether comparable to the play of children, where it replaces the purely sensory technique of gratification. If play and imitative representation suffice for the child and for primitive man, it must not be taken as a sign of modesty, in our sense, or of resignation due to the realization of their impotence; on the contrary, it is the very obvious result of the excessive valuation of their wish, of the will which depends upon the wish and of the paths the wish takes. In time the psychic accent is displaced from the motives of the magic act to its means, namely to the act itself. Perhaps it would be more correct to say that primitive man does not become aware of the over-valuation of his psychic acts until it becomes evident to him through the means employed. It would also seem as if it were the magic act itself which compels the fulfilment of the wish by virtue of its similarity to the object desired. At the stage of animistic thinking there is as yet no way of demonstrating objectively the true state of affairs, but this becomes possible at later stages when, though such procedures are still practised, the psychic phenomenon of scepticism already manifests itself as a tendency to repress. At that stage men will acknowledge that the conjuration of spirits avails nothing unless accompanied by belief, and that the magic effect of prayer fails if there is no piety behind it.

The possibility of a contagious magic which depends upon contiguous association will then show us that the psychic valuation of the wish and the will has been extended to all psychic acts which the will can command. We may say that at present there is a general over-valuation of

2 The King in *Hamlet* (Act III, Scene 4):
   
   "My words fly up, my thoughts remain below,
   Words without thoughts never to heaven go."
ANIMISM, MAGIC AND OMNIPOTENCE OF THOUGHT 873

all psychic processes, that is to say there is an attitude towards the
world which according to our understanding of the relation of reality to
thought must appear like an over-estimation of the latter. Objects as
such are overshadowed by the ideas representing them; what takes place
in the latter must also happen to the former, and the relations which
exist between ideas are also postulated as to things. As thought does not
recognize distances and easily brings together in one act of consciousness
things spatially and temporally far removed, the magic world also puts
itself above spatial distance by telepathy, and treats a past association
as if it were a present one. In the animistic age the reflection of the
inner world must obscure that other picture of the world which we be-
lieve we recognize.

Let us also point out that the two principles of association, similarity
and contiguity, meet in the higher unity of contact. Association by con-
tiguity is contact in the direct sense, and association by similarity is
contact in the transferred sense. Another identity in the psychic process
which has not yet been grasped by us is probably concealed in the use of
the same word for both kinds of associations. It is the same range of
the concept of contact which we have found in the analysis of taboo.1

In summing up we may now say that the principle which controls
magic, and the technique of the animistic method of thought, is "Omnip-
potence of Thought."

3

I have adopted the term "Omnipotence of Thought" from a highly
intelligent man, a former sufferer from compulsion neurosis, who, after
being cured through psychoanalytic treatment, was able to demonstrate
his efficiency and good sense.2 He had coined this phrase to designate
all those peculiar and uncanny occurrences which seemed to pursue him
just as they pursue others afflicted with his malady. Thus if he happened
to think of a person, he was actually confronted with this person as if he
had conjured him up; if he inquired suddenly about the state of health
of an acquaintance whom he had long missed he was sure to hear that
this acquaintance had just died, so that he could believe that the de-
ceased had drawn his attention to himself by telepathic means; if he
uttered a half meant imprecation against a stranger, he could expect to
have him die soon thereafter and burden him with the responsibility for
his death. He was able to explain most of these cases in the course of the
treatment, he could tell how the illusion had originated, and what he
himself had contributed towards furthering his superstitious expecta-

1 Compare Chapter II.
2 Remarks upon a case of Compulsion Neurosis, Jahrb. für Psychoanalyt. und Psy-
tions. All compulsion neurotics are superstitious in this manner and often against their better judgment.

The existence of omnipotence of thought is most clearly seen in compulsion neurosis, where the results of this primitive method of thought are most often found or met in consciousness. But we must guard against seeing in this a distinguishing characteristic of this neurosis, for analytic investigation reveals the same mechanism in the other neuroses. In every one of the neuroses it is not the reality of the experience but the reality of the thought which forms the basis for the symptom formation. Neurotics live in a special world in which, as I have elsewhere expressed it, only the "neurotic standard of currency" counts, that is to say, only things intensively thought of or affectively conceived are effective with them, regardless of whether these things are in harmony with outer reality. The hysterics repeats in his attacks and fixates through his symptoms, occurrences which have taken place only in his phantasy, though in the last analysis they go back to real events or have been built up from them. The neurotic's guilty conscience is just as incomprehensible if traced to real misdeeds. A compulsion neurotic may be oppressed by a sense of guilt which is appropriate to a wholesale murderer, while at the same time he acts towards his fellow beings in a most considerate and scrupulous manner, a behaviour which he evinced since his childhood. And yet his sense of guilt is justified: it is based upon intensive and frequent death wishes which unconsciously manifest themselves towards his fellow beings. It is motivated from the point of view of unconscious thoughts, but not of intentional acts. Thus the omnipotence of thought, the over-estimation of psychic processes as opposed to reality, proves to be of unlimited effect in the neurotic's affective life and in all that emanates from it. But if we subject him to psychoanalytic treatment, which makes his unconscious thoughts conscious to him he refuses to believe that thoughts are free and is always afraid to express evil wishes lest they be fulfilled in consequence of his utterance. But through this attitude as well as through the superstition which plays an active part in his life, he reveals to us how close he stands to the savage, who believes he can change the outer world by a mere thought of his.

The primary obsessive actions of these neurotics are really altogether of a magical nature. If not magic they are at least anti-magic and are destined to ward off the expectation of evil with which the neurosis is wont to begin. Whenever I was able to pierce these secrets, it turned out that the content of this expectation of evil was death. According to Schopenhauer the problem of death stands at the beginning of every

---

1 We seem to attribute the character of the "uncanny" to all such impressions which seek to confirm the omnipotence of thought and the animistic method of thought in general, though our judgment has long rejected it.
ANIMISM, MAGIC AND OMNIPOTENCE OF THOUGHT

philosophy; we have heard that the formation of the soul conception and of the belief in demons which characterize animism, are also traced back to the impression which death makes upon man. It is hard to decide whether these first compulsive and protective actions follow the principle of similarity, or of contrast, for under the conditions of the neurosis they are usually distorted through displacement upon some trifle, upon some action which in itself is quite insignificant.¹ The protective formulae of the compulsion neurosis also have a counterpart in the incantations of magic. But the evolution of compulsive actions may be described by pointing out how these actions begin as a spell against evil wishes which are very remote from anything sexual, only to end up as a substitute for forbidden sexual activity, which they imitate as faithfully as possible.

If we accept the evolution of man’s conceptions of the universe mentioned above, according to which the animistic phase is succeeded by the religious, and this in turn by the scientific, we have no difficulty in following the fortunes of the “omnipotence of thought” through all these phases. In the animistic stage man ascribes omnipotence to himself; in the religious he has ceded it to the gods, but without seriously giving it up, for he reserves to himself the right to control the gods by influencing them in some way or other in the interest of his wishes. In the scientific attitude towards life there is no longer any room for man’s omnipotence; he has acknowledged his smallness and has submitted to death as to all other natural necessities in a spirit of resignation. Nevertheless, in our reliance upon the power of the human spirit which copes with the laws of reality, there still lives on a fragment of this primitive belief in the omnipotence of thought.

In retracing the development of libidinous impulses in the individual from its mature form back to its first beginnings in childhood, we at first found an important distinction which is stated in the *Three contributions to the Theory of Sex.* The manifestations of sexual impulses can be recognized from the beginning, but at first they are not yet directed to any outer object. Each individual component of the sexual impulse works for a gain in pleasure and finds its gratification in its own body. This stage is called autoerotism and is distinguished from the stage of object selection.

In the course of further study it proved to be practical and really necessary to insert a third stage between these two or, if one prefers, to divide the first stage of autoerotism into two. In this intermediary stage, the importance of which increases the more we investigate it, the sexual impulses which formerly were separate, have already formed into a unit and have also found an object; but this object is not external and foreign

¹ The following discussions will yield a further motive for this displacement upon a trivial action.
to the individual, but is his own ego, which is formed at this period. This new stage is called *narcism*, in view of the pathological fixation of this condition which may be observed later on. The individual acts as if he were in love with himself; for the purposes of our analysis the ego impulses and the libidinous wishes cannot yet be separated from each other.

Although this narcistic stage, in which the hitherto dissociated sexual impulses combine into a unity and take the ego as their object, cannot as yet be sharply differentiated, we can already surmise that the narcistic organization is never altogether given up again. To a certain extent man remains narcistic, even after he has found outer subjects for his libido, and the objects on which he bestows it represent, as it were, emanations of the libido which remain with his ego and which can be withdrawn into it. The state of being in love, so remarkable psychologically, and the normal prototype of the psychoses, corresponds to the highest stage of these emanations, in contrast to the state of self-love.

This high estimation of psychic acts found among primitives and neurotics, which we feel to be an overestimation, may now appropriately be brought into relation to narcism, and interpreted as an essential part of it. We would say that among primitive people thinking is still highly sexualized and that this accounts for the belief in the omnipotence of thought, the unshaken confidence in the capacity to dominate the world and the inaccessibility to the obvious facts which could enlighten man as to his real place in the world. In the case of neurotics a considerable part of this primitive attitude had remained as a constitutional factor, while on the other hand the sexual repression occurring in them has brought about a new sexualization of the processes of thought. In both cases, whether we deal with an original libidinous investment of thought or whether the same process has been accomplished regressively, the psychic results are the same, namely, intellectual narcism and omnipotence of thought.¹

If we may take the now established omnipotence of thought among primitive races as a proof of their narcism, we may venture to compare the various evolutionary stages of man’s conception of the universe with the stages of the libidinous evolution of the individual. We find that the animistic phase corresponds in time as well as in content with narcism, the religious phase corresponds to that stage of object finding which is characterized by dependence on the parents, while the scientific stage has its full counterpart in the individual’s state of maturity where, hav-

¹ It is almost an axiom with writers on this subject that a sort of “Solipsism or Berkleyanism” (as Professor Sully terms it as he finds it in the child) operates in the savage to make him refuse to recognize death as a fact. — Marett, *Pre-animistic Religion; Folklore*, Vol. XI, 1900, p. 178.
ing renounced the pleasure principle and having adapted himself to reality, he seeks his object in the outer world.¹

Only in one field has the omnipotence of thought been retained in our own civilization, namely in art. In art alone it still happens that man, consumed by his wishes, produces something similar to the gratification of these wishes, and this playing, thanks to artistic illusion, calls forth effects as if it were something real. We rightly speak of the magic of art and compare the artist with a magician. But this comparison is perhaps more important than it claims to be. Art, which certainly did not begin as art for art's sake, originally served tendencies which today have for the greater part ceased to exist. Among these we may suspect various magic intentions.²

Animism, the first conception of the world which man succeeded in evolving, was therefore psychological. It did not yet require any science to establish it, for science sets in only after we have realized that we do not know the world and that we must therefore seek means of getting to know it. But animism was natural and self-evident to primitive man; he knew how the things of the world were constituted, and as man conceived himself to be. We are therefore prepared to find that primitive man transferred the structural relations of his own psyche to the outer world,³ and on the other hand we may make the attempt to transfer back into the human soul what animism teaches about the nature of things.

Magic, the technique of animism, clearly and unmistakably shows the tendency of forcing the laws of psychic life upon the reality of things, under conditions where spirits did not yet have to play any rôle, and could still be taken as objects of magic treatment. The assumptions of magic are therefore of older origin than the spirit theory, which forms the nucleus of animism. Our psychoanalytic view here coincides with a theory of R. R. Marett, according to which animism is preceded by a pre-

¹ We merely wish to indicate here that the original narcissism of the child is decisive for the interpretation of its character development and that it precludes the assumption of a primitive feeling of inferiority for the child.
² S. Reinach, L'Art et la Magie, in the collection Cultes, Mythes et Religions, Vol. I, pp. 125–136. Reinach thinks that the primitive artists who have left us the scratched or painted animal pictures in the caves of France did not want to "arouse" pleasure, but to "conjure things." He explains this by showing that these drawings are in the darkest and most inaccessible part of the caves and that representations of feared beasts of prey are absent. "Les modernes parlent souvent, par hyperbole, de la magie du pinceau ou du ciseau d'un grand artiste et, en général, de la magie de l'art. Entendu en sense propre, qui est celui d'une constraint mystique exercée par la volonté de l'homme sur d'autres volontés ou sur les choses, cette expression n'est plus admissible; mais nous avons vu qu'elle était autrefois rigoureusement vraie, du moins dans l'opinion des artistes" (p. 136).
³ Recognized through so-called endopsychic perceptions.
animistic stage the nature of which is best indicated by the name Animatism (the theory of general animation). We have practically no further knowledge of pre-animism, as no race has yet been found without conceptions of spirits.\(^1\)

While magic still retains the full omnipotence of ideas, animism has ceded part of this omnipotence to spirits and thus has started on the way to form a religion. Now what could have moved primitive man to this first act of renunciation? It could hardly have been an insight into the incorrectness of his assumptions, for he continued to retain the magic technique.

As pointed out elsewhere, spirits and demons were nothing but the projection of primitive man’s emotional impulses;\(^2\) he personified the things he personified his affects, populated the world with them and then rediscovered his inner psychic processes outside himself, quite like the ingenious paranoiac Schreber, who found the fixations and detachments of his libido reflected in the fates of the “God-rays,” which he invented.\(^3\)

As on a former occasion,\(^4\) we want to avoid the problem as to the origin of the tendency to project psychic processes into the outer world. It is fair to assume, however, that this tendency becomes stronger where the projection into the outer world offers psychic relief. Such a state of affairs can with certainty be expected if the impulses struggling for omnipotence have come into conflict with each other, for then they evidently cannot all become omnipotent. The morbid process in paranoia actually uses the mechanism of projection to solve such conflicts which arise in the psychic life. However, it so happens that the model case of such a conflict between two parts of an antithesis is the ambivalent attitude which we have analysed in detail in the situation of the mourner at the death of one dear to him. Such a case appeals to us as especially fitted to motivate the creation of projection formations. Here again we are in agreement with those authors who declare that evil spirits were the first born among spirits, and who find the origin of soul conceptions in the impression which death makes upon the survivors. We differ from them only in not putting the intellectual problem which death imposes upon the living into the foreground, instead of which we transfer the force which stimulates inquiry to the conflict of feelings into which this situation plunges the survivor.

\(^2\) We assume that in this early narcissistic stage feelings from libidinal and other sources of excitement are perhaps still indistinguishably combined with each other.

\(^3\) Schreber, Denkwürdigkeiten eines Nervenkranken, 1903.—Freud, Psychoanalytic Observations concerning an autobiographically described case of Paranoia, Jahrbuch für Psychoanalyst. Forsch., Vol. III, 1911.

\(^4\) Schreber, p. 59.
ANIMISM, MAGIC AND OMNIPOTENCE OF THOUGHT

The first theoretical accomplishment of man, the creation of spirits, would therefore spring from the same source as the first moral restrictions to which he subjects himself, namely, the rules of taboo. But the fact that they have the same source should not prejudice us in favour of a simultaneous origin. If it really were the situation of the survivor confronted by the dead which first caused primitive man to reflect, so that he was compelled to surrender some of his omnipotence to spirits and to sacrifice a part of the free will of his actions, these cultural creations would be a first recognition of the ἀνάγκη, which opposes man's narciss. Primitive man would bow to the superior power of death with the same gesture with which he seems to deny it.

If we have the courage to follow our assumptions further, we may ask what essential part of our psychological structure is reflected and reviewed in the projection formation of souls and spirits. It is then difficult to dispute that the primitive conception of the soul, though still far removed from the later and wholly immaterial soul, nevertheless shares its nature and therefore looks upon a person or a thing as a duality, over the two elements of which the known properties and changes of the whole are distributed. This origin duality, we have borrowed the term from Herbert Spencer, is already identical with the dualism which manifests itself in our customary separation of spirit from body, and whose indestructible linguistic manifestations we recognize, for instance, in the description of a person who faints or raves as one who is "beside himself."

The thing which we, just like primitive man, project in outer reality, can hardly be anything else but the recognition of a state in which a given thing is present to the senses and to consciousness, next to which another state exists in which the thing is latent, but can reappear, that is to say, the co-existence of perception and memory, or, to generalize it, the existence of unconscious psychic processes next to conscious ones. It might be said that in the last analysis the "spirit" of a person or thing is the faculty of remembering and representing the object, after he or it has been withdrawn from conscious perception.

Of course we must not expect from either the primitive or the current conception of the "soul" that its line of demarcation from other parts should be as marked as that which contemporary science draws between conscious and unconscious psychic activity. The animistic soul, on the contrary, unites determinants from both sides. Its flightiness, and mobility, its faculty of leaving the body, of permanently or temporarily taking possession of another body, all these are characteristics which remind us

---

1 Principles of Sociology, Vol. I.
2 l.c., p. 179.
unmistakably of the nature of consciousness. But the way in which it
keeps itself concealed behind the personal appearance reminds us of the
unconscious; today we no longer ascribe its unchangeableness and in-
destructibility to conscious but to unconscious processes and look upon
these as the real bearers of psychic activity.

We said before that animism is a system of thought, the first complete
theory of the world; we now want to draw certain inferences through
psychoanalytic interpretation of such a system. Our everyday experience
is capable of constantly showing us the main characteristics of the “sys-
tem.” We dream during the night and have learnt to interpret the dream
in the daytime. The dream can, without being untrue to its nature, ap-
pear confused and incoherent; but on the other hand it can also imitate
the order of impressions of an experience, infer one occurrence from an-
other, and refer one part of its contents to another. The dream succeeds
more or less in this, but hardly ever succeeds so completely that an ab-
surdity or a gap in the structure does not appear somewhere. If we sub-
ject the dream to interpretation we find that this unstable and irregular
order of its components is quite unimportant for our understanding of it.
The essential part of the dream is the dream thoughts, which have,
to be sure, a significant, coherent order. But their order is quite different
from that which we remember from the manifest content of the dream.
The coherence of the dream thoughts has been abolished and may either
remain altogether lost or can be replaced by the new coherence of the
dream content. Besides the condensation of the dream elements there is
almost regularly a re-grouping of the same which is more or less independ-
ent of the former order. We say in conclusion, that what the dream-work
has made out of the material of the dream thoughts has been subjected to
a new influence, the so-called “secondary elaboration,” the object of which
evidently is to do away with the incoherence and incomprehensibility
caused by the dream-work, in favour of a new “meaning.” This new mean-
ing which has been brought about by the secondary elaboration is no
longer the meaning of the dream thoughts.

The secondary elaboration of the product of the dream-work is an ex-
cellent example of the nature and the pretensions of a system. An intel-
lectual function in us demands the unification, coherence and compre-
hensibility of everything perceived and thought of, and does not hesitate
to construct a false connection if, as a result of special circumstances, it
cannot grasp the right one. We know such system formation not only
from the dream, but also from phobias, from compulsive thinking and
from the types of delusions. The system formation is most ingenious in
delusional states (paranoia) and dominates the clinical picture, but it
also must not be overlooked in other forms of neuropsychoses. In every
case we can show that a re-arrangement of the psychic material takes
ANIMISM, MAGIC AND OMNIPOTENCE OF THOUGHT 381

place, which may often be quite violent, provided it seems comprehensible from the point of view of the system. The best indication that a system has been formed then lies in the fact that each result of it can be shown to have at least two motivations, one of which springs from the assumptions of the system and is therefore eventually delusional—and a hidden one which, however, we must recognize as the real and effective motivation.

An example from a neurosis may serve as illustration. In the chapter on Taboo I mentioned a patient whose compulsive prohibitions correspond very nearly to the taboo of the Maori. The neurosis of this woman was directed against her husband and culminated in the defence against the unconscious wish for his death. But her manifest systematic phobia concerned the mention of death in general, in which her husband was altogether eliminated and never became the object of conscious solicitude. One day she heard her husband give an order to have his dull razors taken to a certain shop to have them sharpened. Impelled by a peculiar unrest she went to the shop herself, and on her return from this reconnoitre she asked her husband to lay the razors aside for good because she had discovered that there was a warehouse of coffins and funeral accessories next to the shop he mentioned. She claimed that he had intentionally brought the razors into permanent relation with the idea of death. This was then the systematic motivation of the prohibition, but we may be sure that the patient would have brought home the prohibition relating to the razors even if she had not discovered this warehouse in the neighbourhood. For it would have been sufficient if on her way to the shop she had met a bier, a person in mourning, or somebody carrying a wreath. The net of determinants was spread out far enough to catch the prey in any case, it was simply a question whether she should pull it in or not. It could be established with certainty that she did not mobilize the determinants of the prohibition in other circumstances. She would then have said it had been one of her “better days.” The real reason for the prohibition of the razor was, of course, as we can easily guess, her resistance against a pleasurably accentuated idea that her husband might cut his throat with the sharpened razors.

In much the same way a motor inhibition, an abasia or an agoraphobia, becomes perfected and detailed if the symptom once succeeds in representing an unconscious wish and of imposing a defence against it. All the patient’s remaining unconscious phantasies and effective reminiscences strive for symptomatic expression through this outlet, when once it has been opened, and range themselves appropriately in the new order within the sphere of the disturbance of gait. It would therefore be a futile and really foolish way to begin to try to understand the symptomatic struc-

1 pp. 828 ff.
ture, and the details of, let us say, an agoraphobia, in terms of its basic assumptions. For the whole logic and strictness of connexion is only apparent. Sharper observation can reveal, as in the formation of the façade in the dream, the greatest inconsistency and arbitrariness in the symptom formation. The details of such a systematic phobia take their real motivation from concealed determinants which must have nothing to do with the inhibition in gait; it is for this reason that the form of such a phobia varies so and is so contradictory in different people.

If we now attempt to retrace the system of animism with which we are concerned, we may conclude from our insight into other psychological systems that “superstition” need not be the only and actual motivation of such a single rule or custom even among primitive races, and that we are not relieved of the obligation of seeking for concealed motives. Under the dominance of an animistic system it is absolutely essential that each rule and activity should receive a systematic motivation which we today call “superstitious.” But “superstition,” like “anxiety,” “dreams,” and “demons,” is one of the preliminaries of psychology which have been dissipated by psychoanalytic investigation. If we get behind these structures, which like a screen conceal understanding, we realize that the psychic life and the cultural level of savages have hitherto been inadequately appreciated.

If we regard the repression of impulses as a measure of the level of culture attained, we must admit that under the animistic system too, progress and evolution have taken place, which unjustly have been underestimated on account of their superstitious motivation. If we hear that the warriors of a savage tribe impose the greatest chastity and cleanliness upon themselves as soon as they go upon the war-path,¹ the obvious explanation is that they dispose of their refuse in order that the enemy may not come into possession of this part of their person in order to harm them by magical means, and we may surmise analogous superstitious motivations for their abstinence. Nevertheless the fact remains that the impulse is renounced and we probably understand the case better if we assume that the savage warrior imposes such restrictions upon himself in compensation, because he is on the point of allowing himself the full satisfaction of cruel and hostile impulses otherwise forbidden. The same holds good for the numerous cases of sexual restriction while he is pre-occupied with difficult or responsible tasks.² Even if the basis of these prohibitions can be referred to some association with magic, the fundamental conception of gaining greater strength by foregoing gratification of desires nevertheless remains unmistakable, and besides the magic rationalization of the prohibition, one must not neglect its hygienic root.

When the men of a savage tribe go away to hunt, fish, make war, or collect valuable plants, the women at home are in the meantime subjected to numerous oppressive restrictions which, according to the savages themselves, exert a sympathetic effect upon the success of the far-away expedition. But it does not require much acumen to guess that this element acting at a distance is nothing but a thought of home, the longing for the absent, and that these disguises conceal the sound psychological insight that the men will do their best only if they are fully assured of the whereabouts of their guarded women. On other occasions the thought is directly expressed without magic motivation, that the conjugal infidelity of the wife thwarts the absent husband's efforts.

The countless taboo rules to which the women of savages are subject during their menstrual periods are motivated by the superstitious dread of blood which in all probability actually determines it. But it would be wrong to overlook the possibility that this blood dread also serves aesthetic and hygienic purposes which in every case have to be covered by magic motivations.

We are probably not mistaken in assuming that such attempted explanations expose us to the reproach of attributing a most improbable delicacy of psychic activities to contemporary savages.

But I think that we may easily make the same mistake with the psychology of these races who have remained at the animistic stage that we made with the psychic life of the child, which we adults understood no better and whose richness and fineness of feeling we have therefore so greatly undervalued.

I want to consider another group of hitherto unexplained taboo rules because they admit of an explanation with which the psychoanalyst is familiar. Under certain conditions it is forbidden to many savage races to keep in the house sharp weapons and instruments for cutting.1 Frazer cites a German superstition that a knife must not be left lying with the edge pointing upward because God and the angels might injure themselves with it. May we not recognize in this taboo a premonition of certain "symptomatic actions" 2 for which the sharp weapon might be used by unconscious evil impulses?

IV

THE INFANTILE RECURRENCE OF TOTEMISM

The reader need not fear that psychoanalysis, which first revealed the regular over-determination of psychic acts and formations, will be tempted to derive anything so complicated as religion from a single source. If it necessarily seeks, as in duty bound, to gain recognition for one of the sources of this institution, it by no means claims exclusiveness for this source or even first rank among the concurring factors. Only a synthesis from various fields of research can decide what relative importance in the genesis of religion is to be assigned to the mechanism which we are to discuss; but such a task exceeds the means as well as the intentions of the psychoanalyst.

I

The first chapter of this book made us acquainted with the conception of totemism. We heard that totemism is a system which takes the place of religion among certain primitive races in Australia, America, and Africa, and furnishes the basis of social organization. We know that in 1869 the Scotchman MacLennan attracted general interest to the phenomena of totemism, which until then had been considered merely as curiosities, by his conjecture that a large number of customs and usages in various old as well as modern societies were to be taken as remnants of a totemic epoch. Science has since then fully recognized this significance of totemism. I quote a passage from the Elements of the Psychology of Races by W. Wundt (1912), as the latest utterance on this question: ¹ “Taking all this together it becomes highly probable that a totemic culture was at one time the preliminary stage of every later evolution as well as a transition stage between the state of primitive man and the age of gods and heroes.”

It is necessary for the purposes of this chapter to go more deeply into the nature of totemism. For reasons that will be evident later I here give

¹ p. 139.
preference to an outline by S. Reinach, who in the year 1900 sketched the following *Code du Totémisme* in twelve articles, like a catechism of the totemic religion: ¹

1. Certain animals must not be killed or eaten, but men bring up individual animals of these species and take care of them.

2. An animal that dies accidentally is mourned and buried with the same honours as a member of the tribe.

3. The prohibition as to eating sometimes refers only to a certain part of the animal.

4. If pressure of necessity compels the killing of an animal usually spared, it is done with excuses to the animal and the attempt is made to mitigate the violation of the taboo, namely the killing, through various tricks and evasions.

5. If the animal is sacrificed by ritual, it is solemnly mourned.

6. At specified solemn occasions, like religious ceremonies, the skins of certain animals are donned. Where totemism still exists, these are totem animals.

7. Tribes and individuals assume the names of totem animals.

8. Many tribes use pictures of animals as coats of arms and decorate their weapons with them; the men paint animal pictures on their bodies or have them tattooed.

9. If the totem is one of the feared and dangerous animals it is assumed that the animal will spare the members of the tribe named after it.

10. The totem animal protects and warns the members of the tribe.

11. The totem animal foretells the future to those faithful to it and serves as their leader.

12. The members of a totem tribe often believe that they are connected with the totem animal by the bond of common origin.

The value of this catechism of the totem religion can be more appreciated if one bears in mind that Reinach has here also incorporated all the signs and clews which lead to the conclusion that the totemic system had once existed. The peculiar attitude of this author to the problem is shown by the fact that to some extent he neglects the essential traits of totemism, and we shall see that of the two main tenets of the totemistic catechism he has forced one into the background and completely lost sight of the other.

In order to get a more correct picture of the characteristics of totemism we turn to an author who has devoted four volumes to the theme, combining the most complete collection of the observations in question with the most thorough discussion of the problems they raise. We shall remain

¹ *Revue Scientifique*, October, 1900 reprinted in the four volume work of the author, *Cultes, Mythes et Religions*, 1908, Tome I, p. 17.
indebted to J. G. Frazer, the author of *Totemism and Exogamy,* for the pleasure and information he affords, even though psychoanalytic investigation may lead us to results which differ widely from his.\(^2\)

"A totem," wrote Frazer in his first essay,\(^8\) "is a class of material objects which a savage regards with superstitious respect, believing that there exists between him and every member of the class an intimate and altogether special relation. The connection between a person and his totem is mutually beneficent; the totem protects the man and the man shows his respect for the totem in various ways, by not killing it if it be an animal, and not cutting or gathering it if it be a plant. As distinguished from a fetich, a totem is never an isolated individual but always a class of objects, generally a species of animals or of plants, more rarely a class of inanimate natural objects, very rarely a class of artificial objects."

At least three kinds of totem can be distinguished:

1. The tribal totem which a whole tribe shares and which is hereditary from generation to generation,

2. The sex totem which belongs to all the masculine or feminine members of a tribe to the exclusion of the opposite sex, and

3. The individual totem which belongs to the individual and does not descend to his successors.

\(^2\) 1920.

\(^8\) But it may be well to show the reader beforehand how difficult it is to establish the facts in this field.

In the first place those who collect the observations are not identical with those who digest and discuss them; the first are travellers and missionaries, while the others are scientific men who perhaps have never seen the objects of their research.—It is not easy to establish an understanding with savages. Not all the observers were familiar with the languages but had to use the assistance of interpreters or else had to communicate with the people they questioned in the auxiliary language of pidgin-English. Savages are not communicative about the most intimate affairs of their culture and unburden themselves only to those foreigners who have passed many years in their midst. From various motives they often give wrong or misleading information (Compare Frazer, *The Beginnings of Religion and Totemism Among the Australian Aborigines; Fortnightly Review, 1905; Totemism and Exogamy, Vol. 1, p. 150*).—It must not be forgotten that primitive races are not young races but really are as old as the most civilized, and that we have no right to expect that they have preserved their original ideas and institutions for our information without any evolution or distortion. It is certain, on the contrary, that far-reaching changes in all directions have taken place among primitive races, so that we can never unhistorically decide which of their present conditions and opinions have preserved the original past, having remained petrified, as it were, and which represent a distortion and change of the original. It is due to this that one meets the many disputes among authors as to what proportion of the peculiarities of a primitive culture is to be taken as a primary, and what as a later and secondary manifestation. To establish the original conditions, therefore, always remains a matter of construction. Finally, it is not easy to adapt oneself to the ways of thinking of primitive races. For like children, we easily misunderstand them, and are always inclined to interpret their acts and feelings according to our own psychic constellations.

\(* Totemism (Edinburgh, 1887), reprinted in the first volume of his great study, Totemism and Exogamy.\)
The last two kinds of totem are comparatively of little importance compared to the tribal totem. Unless we are mistaken they are recent formations and of little importance as far as the nature of the taboo is concerned.

The tribal totem (clan totem) is the object of veneration of a group of men and women who take their name from the totem and consider themselves consanguineous offspring of a common ancestor, and who are firmly associated with each other through common obligations towards each other as well as by the belief in their totem.

Totenism is a religious as well as a social system. On its religious side it consists of the relations of mutual respect and consideration between a person and his totem, and on its social side it is composed of obligations of the members of the clan towards each other and towards other tribes. In the later history of totemism these two sides show a tendency to part company; the social system often survives the religious and conversely remnants of totemism remain in the religion of countries in which the social system based upon totemism had disappeared. In the present state of our ignorance about the origin of totemism we cannot say with certainty how these two sides were originally combined. But there is on the whole a strong probability that in the beginning the two sides of totemism were indistinguishable from each other. In other words, the further we go back the clearer it becomes that a member of a tribe looks upon himself as being of the same genus as his totem and makes no distinction between his attitude towards the totem and his attitude towards his tribal companions.

In the special description of totemism as a religious system, Frazer lays stress on the fact that the members of a tribe assume the name of their totem and also as a rule believe that they are descended from it. It is due to this belief that they do not hunt the totem animal or kill or eat it, and that they deny themselves every other use of the totem if it is not an animal. The prohibitions against killing or eating the totem are not the only taboos affecting it; sometimes it is also forbidden to touch it and even to look at it; in a number of cases the totem must not be called by its right name. Violation of the taboo prohibitions which protect the totem is punished automatically by serious disease or death.¹

Specimens of the totem animals are sometimes raised by the clan and taken care of in captivity.² A totem animal found dead is mourned and buried like a member of the clan. If a totem animal had to be killed it was done with a prescribed ritual of excuses and ceremonies of expiation.

The tribe expected protection and forbearance from its totem. If it

¹ Compare the chapter on Taboo.
² Just as today we still have the wolves in a cage at the steps of the Capitol in Rome and the bears in the pit at Berne.
was a dangerous animal (a beast of prey or a poisonous snake), it was assumed that it would not harm, and where this assumption did not come true the person attacked was expelled from the tribe. Frazer thinks that oaths were originally ordeals, many tests as to descent and genuineness being in this way left to the decision of the totem. The totem helps in case of illness and gives the tribe premonitions and warnings. The appearance of the totem animal near a house was often looked upon as an announcement of death. The totem had come to get its relative.¹

A member of a clan seeks to emphasize his relationship to the totem in various significant ways; he imitates an exterior similarity by dressing himself in the skin of the totem animal, by having the picture of it tattooed upon himself, and in other ways. On the solemn occasions of birth, initiation into manhood or funeral obsequies this identification with the totem is carried out in deeds and words. Dances in which all the members of the tribe disguise themselves as their totem and act like it, serve various magic and religious purposes. Finally there are the ceremonies at which the totem animal is killed in a solemn manner.²

The social side of totemism is primarily expressed in a sternly observed commandment and in a tremendous restriction. The members of a totem clan are brothers and sisters, pledged to help and protect each other; if a member of the clan is slain by a stranger the whole tribe of the slayer must answer for the murder and the clan of the slain man shows its solidarity in the demand for expiation for the blood that has been shed. The ties of the totem are stronger than our ideas of family ties, with which they do not altogether coincide, since the transfer of the totem takes place as a rule through maternal inheritance, paternal inheritance possibly not counting at all in the beginning.

But the corresponding taboo restriction consists in the prohibition against members of the same clan marrying each other or having any kind of sexual intercourse whatsoever with each other. This is the famous and enigmatic exogamy connexion with totemism. We have devoted the whole first chapter of this book to it, and therefore need only mention here that this exogamy springs from the intensified incest dread of primitive races, that it becomes entirely comprehensible as a security against incest in group marriages, and that at first it accomplishes the avoidance of incest for the younger generation and only in the course of further development becomes a hindrance to the older generation as well.³

To this presentation of totemism by Frazer, one of the earliest in the literature on the subject, I will now add a few excerpts from one of the latest summaries. In the Elements of the Psychology of Races, which

¹ Like the legend of the white woman in many noble families.
