CONTENTS.

CHAPTER I.

Origin of the Ayurveda.—The eight divisions of the Ayurveda and the characteristic features of each of them—History of Surgery and its primary importance—Gradual extension of the Ayurveda—Definition of Purusha—Classification of the mobile and the immobile—Definition and classification of disease—Classification of Oshadhia.—The four factors to be employed in successfully coping with a disease.—The four stages of a disease ... 1—15

CHAPTER II.

Initiation of a student of the Ayurveda.—Qualifications of a student of medicine—Mode of Initiation—Contract between the preceptor and his disciple—Prohibited periods of the study of the Ayurveda ... ... ... ... ... 16—20

CHAPTER III.

Classification of the Ayurveda &c.—The distribution of its hundred and twenty chapters among the five subdivisions of this Samhita—A synopsis of the contents of the chapters allotted to each of its subdivisions—Skilful and unskilful physicians—The mode of studying the Ayurveda—Duties of a pupil after having finished the study of the Ayurveda ... ... 21—32

CHAPTER IV.

General explanations.—Necessity of a clear exposition of the Ayurveda—Defects which flow from non-exposition of the same—Duties of a student of the Ayurveda ... ... 33—35
CHAPTER V.

Preliminary surgical measures:—Classification of surgical operations—Accessories, which are to be collected at the outset—Qualifications of a surgeon—Modes of incision, etc. at the different parts of the body—Measures to be adopted after surgical operations—The prophylactic mantra—Directions for dressing wounds and removing bandages according to the nature of the prevailing season of the year—Acts and articles prohibited to a patient with a granulating wound—Measures for removing the pain in a surgical wound ... ... ... ... ... ... ... ... ... ... 36—44

CHAPTER VI.

Characteristic features of the different seasons of the year and their influence on health and drugs:—Time and its traits—Etymology of the term Kala (time)—Divisions of time and classification of the seasons of the year, with their respective features. Classification of the seasons of the year for the purposes of the Ayurveda—Inception, aggravation, or subsidence of the deranged Vāyu, Pittam and Kapham according to the nature of the prevailing season of the year—Aggravation or subsidence of the same in the different quarters of the day and night—Causes of epidemics—Prophylactic measures—Features of natural or unnatural seasons 45—55

CHAPTER VII.

Surgical appliances, their use and construction:—Number of surgical instruments—Names, dimensions, use and functions of surgical appliances with points of their respective excellence or defect—Minor surgical accessories—Excellence of Kankakulka ... 56—63

CHAPTER VIII.

Surgical instruments, and their names, use and construction:—Mode of handling the different surgical instruments—Their commendable features—Sharpening, edging and tempering, etc., of
surgical instruments and enumeration of cases where they should be employed ... ... ... ... 64-70

CHAPTER IX.

Practice of surgery:—Teaching of surgery on dummies and suitable fruits, etc. ... ... ... ... 71-73

CHAPTER X.

Essential qualifications of a physician before he formally enters his profession:—Means of diagnosis—Things to be observed in making a diagnosis—Cure, palliation and incurability of diseases—Prohibited conduct of a physician ... ... ... 71-77

CHAPTER XI.

Mode of preparing alkalis, and their comparative excellence as incising, excising or scraping agents: Alkalis for external application or internal use—Cases where alkalis prove injurious—The three potencies of alkalis for external application—Commendable or defective features in an alkali—Mode of its application, and after-measures—Symptoms of satisfactory cauterisation—Persons who should not be treated with alkalis—Dangers which attend its abuse ... ... ... ... ... ... ... 78-87

CHAPTER XII.

Actual cauteries:—Accessories to an act of cauterisation—Preliminary measures—Symptoms which manifest themselves as the skin, or flesh, or a vein, or joint is cauterised—Seats of cauterisation in different diseases—Different modes of cauterisation—Characteristic symptoms of burns and scalds, etc.—Rationale of treating a burn or a scald with heat—Medical treatment of burns and scalds, etc.—Symptoms which appear when the nostrils, etc., of a person is choked with smoke—Its treatment—Medical treatment of sun strikes, and scorchings by hot wind, etc. ... ... 88-97
CONTENTS.

CHAPTER XIII.

Leeches and their use—Persons who may be leached—Mode of extracting the vitiated blood in such cases—Mode of applying the leeches—Classification, and mode of collecting and keeping the leeches—Bad leeches and their characteristics—After-measures ... ... ... ... ... 98—106

CHAPTER XIV.

Origin and characteristic features of lymph chyle:—Its location, course and metamorphosis into blood—Menstrual blood and its nature—Successive metamorphosis of the fundamental principles of the body—Etymology of the term Dhatu—Blood—Swellings which should not be bled—Two kinds of blood letting—Venesection, its mode and different aspects—Mischief created by the vitiated blood not extracted from the system—Causes of excessive bleeding and its effect upon the system—Symptoms of satisfactory bleeding and its beneficial results—Measures to be adopted in cases of excessive or scanty bleeding—Medical treatment of excessive bleeding—Various instructions ... ... ... ... 106—119

CHAPTER XV.

Development or non-development of the excrements and constituent principles of the body:—Nature, locations and functions of the Normal Vayu, Pittam and Kapham, as well as of the lymph chyle, blood, fat, marrow, senten, and ojah (albumen), and the symptoms which mark their increase, decrease, or dislodgment in the human system—Etiologies of obesity and thinness ... 120—140

CHAPTER XVI.

Piercing and bandaging of the lobules of ears:—Evils which attend the accidental bursting of a local vein—Medical unguents and lint—Different processes of bringing about the adhesion of a bifurcated ear-lobe—plastic and rhinoplastic operations ... 141—154
CONTENTS.

CHAPTER XVII.

Distinction between suppurating and non-suppurating swellings.—Different types of inflammatory swellings produced by the deranged Vayu, Pittam, etc., and the symptoms which mark their respective actions in each type—Characteristic symptoms of a suppurating, suppurated, or non-suppurated swelling—Hints on incising suppurated swellings—Evils of opening an abscess at its inflammatory stage—Feeling and anaesthetizing of a patient before lancing off an abscess—Classification of surgical operations in connection with an abscess ... ... ... 155—161

CHAPTER XVIII.

Dressings and bandages of ulcers.—Classification of medicinal plasters according to their thickness, application and function—Use of the different types of plasters—Articles of bandaging—Bandages and their names and applications—Tow—Mode of introducing a lint—Renewals of bandages according to the nature of the ulcer and the prevailing season of the year—Evils of non-bandaging—Benefits of bandaging—Cases where bandaging is prohibited—Hints on the proper lubrication of the lint—Incidental remarks on the bandaging of fractured or dislocated bones ... ... ... 162—175

CHAPTER XIX.

Nursing and management of an Ulcer-patient.—Nature of his bed and chamber—Articles prohibited to an ulcer patient—Prophylaxis against monsters and demons—Diet and conduct of an ulcer-patient ... ... ... ... ... 176—182

CHAPTER XX.

Salutary and Non-salutary effects of regimen, etc.—Classification of all articles of fare according as they are wholesome or unwholesome to the human system, or are relatively wholesome or otherwise—Foodstuff—Incompatibility through combination—Injuriousness through combination—Incompatibility through pre-
paration, quantity or flavour—Effect of winds on the human system as they blow from the different quarters of the heaven ... 183—193

CHAPTER XXI.

The deranged Vayu, Pittam, etc., as the exciting causes of ulcers:—Seats of Vayu, Pittam, etc. in the human body, and their functions—Different kinds of Vayu, Pittam and Shleshmam, and their functions and locations in the economy of nature—Factors which aggravate the deranged Vayu, Pittam and Kapham, and their periodicity—Symptoms of the deranged Pittam, Kapham and blood—Expansion of the deranged Vayu, Pittam, etc., and diseases due to their incarcereation in the different parts of the body—Disease—its development and occasions which necessitate the calling in of medical aid—The nature of medical treatment in the case where two or all of the Vayu, Pittam and Kapham are involved ... 194—211

CHAPTER XXII.

Secretions from boils and ulcers:—Shapes and seats of boils etc.—Symptoms of bad ulcers—Secretions from ulcers—Presumption as to the derangement of Vayu, etc. from the nature of the secretion—Different kinds of pain which mark the different types of ulcers—Colours of Ulcers ... ... ... ... 212—219

CHAPTER XXIII.

Prognosis in ulcer cases:—Easy curability of an ulcer—Symptoms of an ulcer which readily granulates—Symptoms of difficult or incurable types, as well as of those which admit only of palliation—Symptoms of a purified, granulating or healed ulcer—Factors which lead to the reopening of a healed ulcer ... 220—227

CHAPTER XXIV.

Classification of diseases according as they are medical or surgical:—Further classification of diseases according as they are congenital, etc.—Diseases due to mental, physical or providential
CONTENTS.

causes—Diseases due to the derangement of lymph chyle, etc.—Relation between fever and the deranged Vayu, Pittam and Kapham ... 228—237

CHAPTER XXV.

Eight different forms of surgical operation:—Cases where incision, excision, scarification, aspiration, extraction, etc., should be respectively resorted to—Mode and conditions of suturing—Defective surgical operations—Symptoms which mark the injudicious hurting of a vein, artery, ligament, joint or bone, as well as those which are manifested when any of the other Marmanas is accidentally hurt 238—246

CHAPTER XXVI.

Exploration of splinters, deep-seated in the organism:—Definition of a Shalyam—Classification of the shafts of arrows—Flights of arrows—Characteristic symptoms of arrow-wounds—Localisation of a shaft of arrow lying imbedded in the body—Symptoms which show that the shaft or the splinter does not lie imbedded in the wound—Evils of not extracting the shaft of an arrow from such a wound 247—255

CHAPTER XXVII.

Extraction of splinters:—Fifteen different processes of extraction—Two recognised modes of extracting splinters from all types of wounds—Measures to be adopted after the extraction—Mode of extracting splinters from veins, etc.—Dangers of not extracting a splinter from a wound 256—265

CHAPTER XXVIII.

Favourable or unfavourable prognosis of an ulcer:—Fatal or unfavourable symptoms—Advisability of abandoning the patient when these unfavourable symptoms appear 266—269
CHAPTER XXIX.

Favourable or unfavourable prognosis in diseases as known from messengers, omen, birds of happy or evil augury;—The same predicted from dreams, etc.—Remedies for inauspicious dreams under the circumstance—Description of auspicious dreams 270—283

CHAPTER XXX.

Prognosis that can be obtained from the perverted functions of the five sense organs;—Arishta or unfavourable mental symptoms—Unfavourable symptoms in connection with the faculties of hearing, touch, taste, smell or sight 284—287

CHAPTER XXXI.

Prognosis to be gathered from the altered condition of features;—Other Arishta symptoms in connection with Asthma, Cough, and Edema, &c. 288—292

CHAPTER XXXII.

Prognosis based on the perversion of the external appearances of the body and other Arishta symptoms 293—297

CHAPTER XXXIII.

Incurable diseases, and Incurable symptoms developed in connection with diseases of the nervous systems, morbid urethral discharges, Leprosy, Haemorrhoids;—Fistula in ano—Urinary concretions, Difficult labour, Ascites, Fever, Dysentery, Phthisis, abdominal glands, Abscess, Chlorosis, Haemoptysis, Insanity and Epilepsy 298—302

CHAPTER XXXIV.

Mode of preserving the life of a king whose soldiers are on the march;—The four factors of medical treatment—Good which
CONTENTS.

results from a satisfactory combination of all these four factors—
Commendable features in a physician, patient, medicine and
nurse ... ... ... 303—307

CHAPTER XXXV.

Clinical Observations:—Characteristic features of a long lived
or short lived man, or of one with an average duration of life—
Physical temperaments and dimensions of the limbs and members
of the body—Curable, incurable or suppressible diseases—Sympathetic and
Primary diseases—Different kinds of digestive capacity—Three stages of man—Relative preponderance of Vayu,
Pittam and Kapham during different stages of life—Classification
of countries according to their physical features ... 308—328

CHAPTER XXXVI.

Miscellaneous remedies for swellings:—Plasters for establishing
suppuration in swellings—Plasters for bursting, pressing out the
pus from, or assuaging swellings—Aseptic pastes—Fumigating com-
pounds—Healing pastes—Compounds which favour granulation in, or
destroy the supergrowths around an ulcer ... ... 329—335

CHAPTER XXXVII.

Destructive traits of the different kinds of soil commended for
the growth or culture of medicinal herbs:—Examination of the
soil from which medicinal drugs are to be gathered—Examination
of drugs—Mode of collecting drugs—Commendable traits in a room
to be used as a drug-store ... ... 336—341

CHAPTER XXXVIII.

A General Classification of drugs according to their therapeu-
tical properties:—Enumeration of thirty seven different groups of
medicinal drugs—Their use and indications ... 342—357
CONTENTS.

CHAPTER XXXIX.

Drugs possessed of cathartic or soothing effects:—Emetics—Purgatives—Drugs possessed of both emetic and purgative properties—Errhines—Drugs which respectively soothe the deranged Vayu, Pittam and Kapham—Mode of administering medicines... 358—363

CHAPTER XL.

Drugs and their flavours, virtues, potencies, and chemical actions:—Dispositions as regards the primary importance of drugs, or their flavours, potency, or chemical reaction in respect of curing diseases—Causes of different kinds of digestion—Conclusion as regards the primary importance of drugs in curing a disease... 361—374

CHAPTER XLI.

Specific properties of drugs:—Classification of drugs according to the preponderance of the virtues of elemental matter in them—Characteristic features of drugs of dominant earth matter, etc.—Periodicity of drug action—Reasons why purgative drugs move the bowels—Factors which lead to the aggravation or subsidence of the deranged Vayu, Pittam and Kapham—Potency of drugs... 375—381

CHAPTER XLII.

Specific properties of flavours:—Reasons for the classification of flavours—Relation of the elemental earth matter with the flavours—Reasons for the primary derangement of Vayu, Pittam, etc.—Symptoms and aggravating factors of the deranged Vayu, Pittam and Kapham—Virtues of the different kinds of flavour, such as sweet, etc.—Enumeration of groups of sweet drugs, etc.—Sixty-three different combinations of flavours... 382—393
CONTENTS.

CHAPTER XLI.

Mode of administering emetics:—Compounds of Madana fruits
Compounds of Jimutaka

... 394–399

CHAPTER XLI.

Choice of purgatives:—Most efficient purgatives—Purgative
compounds—Purgative soups—Asavas, wines, Sauviras, and Tushodakas, etc.—Instructions as to the way of administering purgative
compounds of Danti, etc., in the manner of Trivrit compounds—
Trivrit Ashtakam—Mode of using purgative fruits and milky
exudations of trees—Administration of purgative medicines through
the media of wine, etc.

... 410–417

CHAPTER XLV.

Rules to be observed in respect of liquid substances:—Water
group—Modes of purifying different kinds of water and their virtues
etc.—Milk group—Virtues of the different kinds of milk—Curd

group—Virtues of the different kinds of curd—Takra group—Modes
of preparing different kinds of Takra, and their attributes—Properties
of butter, Khat, etc.—Different kinds of Ghritas (clarified butter), and
their properties—Oil group and the properties of different kinds of
oil—Properties of the fat obtained from aquatic or domestic animals
—Honey group—Classification of the different kinds of honey and
their properties—Sugar-cane group, and the properties of the different
preparations of sugar-cane juice, such as treacle, sugar, etc.—Wine
group—Properties of the different kinds of animal urine...

418–468

CHAPTER XLVI.

Different kinds of food and drink:—Descriptions of Shali
Dhanyam, Shaktika, Vrili, Kudhanyam, Vaidal, Mudga, Sosamum,
Barley, Wheat, Shinvidhanyam etc.—Properties of Dhanyas according
to their maturity—Description of the Verudha Dhanyas—Flesh group
—Classification of flesh—The Vishkira group—General properties of the flesh of Vishkira animals—Etymology of the term Vishkira—Enumeration of the animals of the Pratuda group—Cave dwelling, and hole dwelling animals—The Prasaha group of animals—Beneficial use of flesh of the Prasaha group in Phthisis—Detailed classification of animals with the etymology of their generic names, and properties of their flesh—Fruit group, and the properties of different fruits—Grains or pot herbs, and their properties—Flower group—The group of edible leaves of plants, and their properties—The group of bulbous plants—The group of salts—General properties of nitrate of potash, etc.—Properties of gold, iron, silver and other metals—Determination of the properties of drugs other than those herein mentioned—Drinks and beverages—Rules of diet—Rules of serving out the meal—General causes of indigestion—Symptoms of the different types of indigestion—Medical treatment of the same—Symptoms which mark acts of over or insufficient eating, or an act of eating a meal before a previous one is digested—Reason of one’s feeling hungry even when suffering from indigestion ... 469—571
