PREFACE TO THE SEVENTH EDITION

In the preparation of this issue we have made no changes in the general plan of the work, but merely revised all chapters and endeavoured to bring each up to date. The most notable changes have been made in the sections dealing with the theory of dietaries, the treatment and disposal of sewage, parasites, disinfection, vital statistics, and sanitary law. Each of these has been modified and in some manner extended. Some new figures have been introduced into the text and others omitted.

In its new form, we hope that this elementary manual will be found to have retained its value as a plain and simple guide to the prevention of disease.

November, 1908.
